

Exam A

QUESTION 1

Refer to the exhibit.

```
R1# show ip route

D 192.168.16.0/26 [90/2679326] via 192.168.1.1
R 192.168.16.0/24 [120/3] via 192.168.1.2
O 192.168.16.0/21 [110/2] via 192.168.1.3
i L1 192.168.16.0/27 [115/30] via 192.168.1.4
```

Which route does R1 select for traffic that is destined to 192.168.16.2?

- A. 192.168.16.0/21
- B. 192.168.16.0/24
- C. 192.168.16.0/26
- D. 192.168.16.0/27

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 2

Which technology can prevent client devices from arbitrarily connecting to the network without state remediation?

- A. 802.1x
- B. IP Source Guard
- C. MAC Authentication Bypass
- D. 802.11n

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 3

An engineer observes high usage on the 2.4GHz channels and lower usage on the 5GHz channels. What must be configured to allow clients to preferentially use 5GHz access points?

- A. Re-Anchor Roamed Clients
- B. 11ac MU-MIMO
- C. OEAP Split Tunnel
- D. Client Band Select

Correct Answer: D

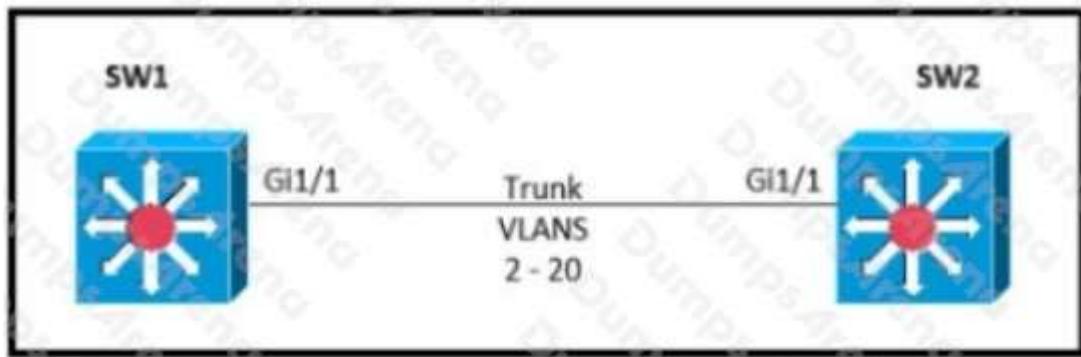

Section: (none)

Explanation

Explanation/Reference:

QUESTION 4

Refer to the exhibit.

Which command must be executed for Gi1.1 on SW1 to become a trunk port if Gi1/1 on SW2 is configured in desirable or trunk mode?

- A. switchport mode trunk
- B. switchport mode dot1-tunnel
- C. switchport mode dynamic auto
- D. switchport mode dynamic desirable

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 5

Which IPv6 address type provides communication between subnets and is unable to route on the Internet?

- A. global unicast
- B. unique local
- C. link-local
- D. multicast

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 6

What are two descriptions of three-tier network topologies? (Choose two)

- A. The core and distribution layers perform the same functions
- B. The access layer manages routing between devices in different domains

- C. The network core is designed to maintain continuous connectivity when devices fail.
- D. The core layer maintains wired connections for each host
- E. The distribution layer runs Layer 2 and Layer 3 technologies

Correct Answer: CE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 7

Refer to the exhibit.

```
SW1(config-line)#line vty 0 15
SW1(config-line)#no login local
SW1(config-line)#password cisco

SW2(config)#username admin1 password abcd1234
SW2(config)#username admin2 password abcd1234
SW2(config-line)#line vty 0 15
SW2(config-line)#login local

SW3(config)#username admin1 secret abcd1234
SW3(config)#username admin2 secret abcd1234
SW3(config-line)#line vty 0 15
SW3(config-line)#login local

SW4(config)#username admin1 secret abcd1234
SW4(config)#username admin2 secret abcd1234
SW4(config-line)#line console 0
SW4(config-line)#login local
```

An administrator configures four switches for local authentication using passwords that are stored in a cryptographic hash. The four switches must also support SSH access for administrators to manage the network infrastructure. Which switch is configured correctly to meet these requirements?

- A. SW1
- B. SW2
- C. SW3
- D. SW4

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 8

What is a role of access points in an enterprise network?

- A. connect wireless devices to a wired network
- B. support secure user logins to devices or the network
- C. integrate with SNMP in preventing DDoS attacks
- D. serve as a first line of defense in an enterprise network

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 9

What is a function of TFTP in network operations?

- A. transfers a backup configuration file from a server to a switch using a username and password
- B. transfers files between file systems on a router
- C. transfers a configuration files from a server to a router on a congested link
- D. transfers IOS images from a server to a router for firmware upgrades

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 10

A network engineer must create a diagram of a multivendor network. Which command must be configured on the Cisco devices so that the topology of the network can be mapped?

- A. Device(Config)#lldp run
- B. Device(Config)#cdp run
- C. Device(Config-if)#cdp enable
- D. Device(Config)#flow-sampler-map topology

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 11

What is the same for both copper and fiber interfaces when using SFP modules?

- A. They support an inline optical attenuator to enhance signal strength
- B. They provide minimal interruption to services by being hot-swappable
- C. They offer reliable bandwidth up to 100 Mbps in half duplex mode
- D. They accommodate single-mode and multi-mode in a single module

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 12

When a WLAN with WPA2 PSK is configured in the Wireless LAN Controller GUI which format is supported?

- A. Unicode
- B. base64
- C. decimal
- D. ASCII

Correct Answer: D

Section: (none)

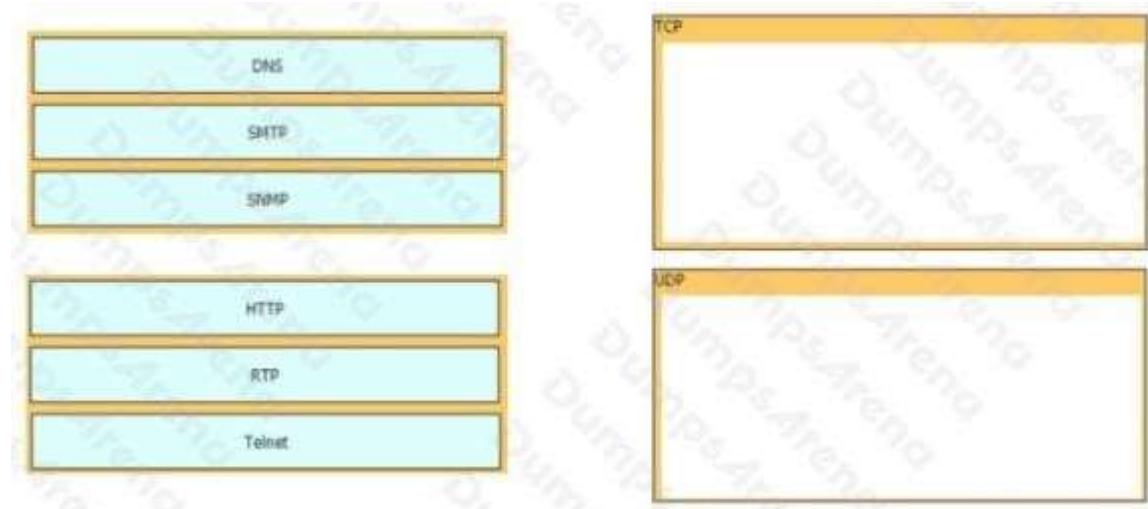

Explanation

Explanation/Reference:

QUESTION 13

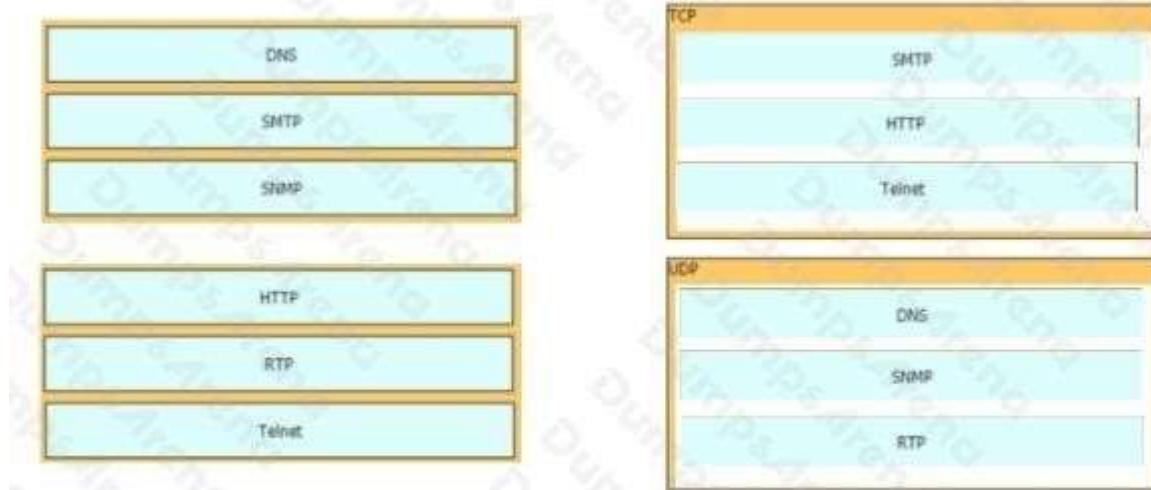

- (DRAG DROP)

Drag and drop the TCP/IP protocols from the left onto the transmission protocols on the right

Answer:

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 14

When deploying syslog, which severity level logs informational message?

- A. 0
- B. 2
- C. 4
- D. 6

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 15

Refer to the exhibit.

Interface	IP-Address	OK?	Method	Status	Protocol
FastEthernet0/0	unassigned	YES	NVRAM	administratively down	down
GigabitEthernet1/0	192.168.0.1	YES	NVRAM	up	up
GigabitEthernet2/0	10.10.1.10	YES	manual	up	up
GigabitEthernet3/0	10.10.10.20	YES	manual	up	up
GigabitEthernet4/0	unassigned	YES	NVRAM	administratively down	down
Loopback0	172.16.15.10	YES	manual		

What does router R1 use as its OSPF router-ID?

- A. 10.10.1.10
- B. 10.10.10.20
- C. 172.16.15.10
- D. 192.168.0.1

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 16

Which protocol does an access point use to draw power from a connected switch?

- A. Internet Group Management Protocol
- B. Adaptive Wireless Path Protocol
- C. Cisco Discovery Protocol
- D. Neighbor Discovery Protocol

Correct Answer: C

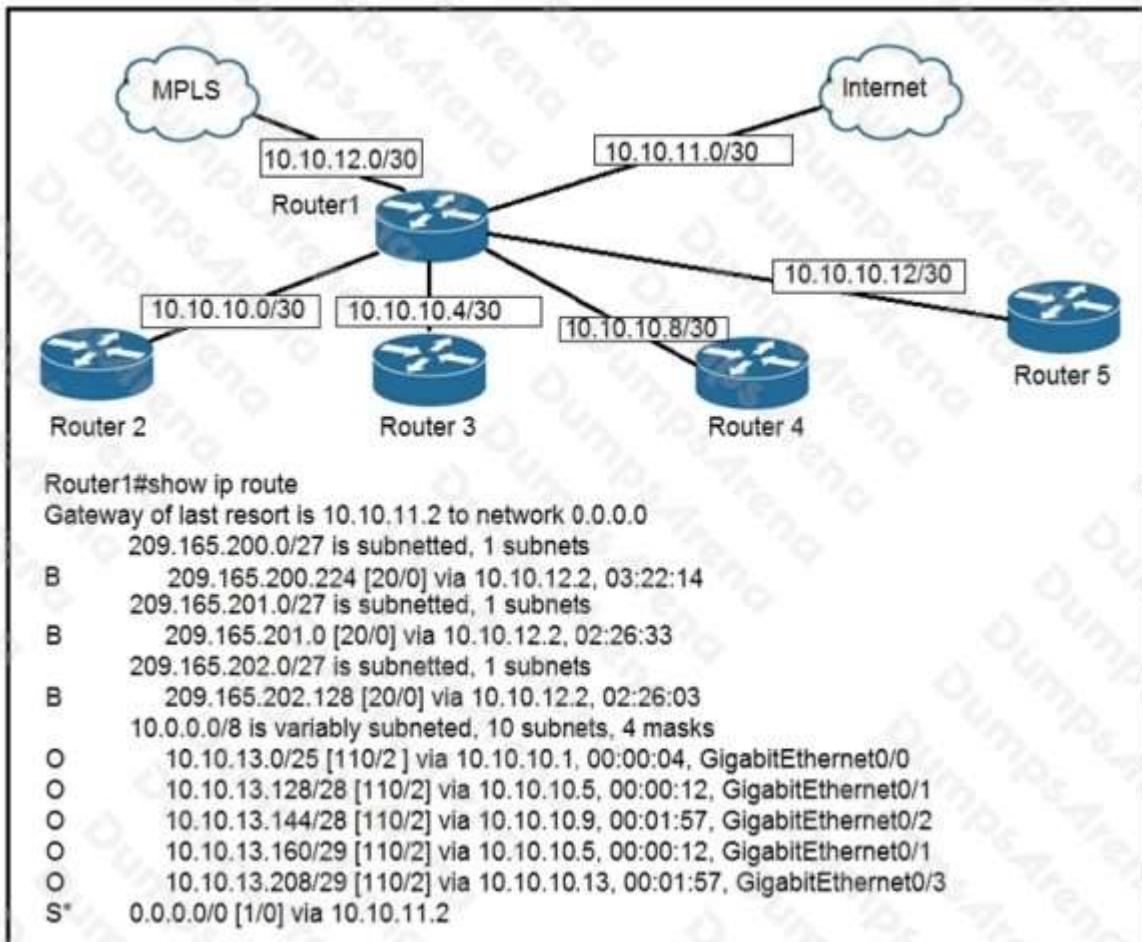

Section: (none)

Explanation

Explanation/Reference:

QUESTION 17

Refer to the exhibit.

To which device does Router1 send packets that are destined to host 10.10.13.165?

- A. Router2
- B. Router3
- C. Router4
- D. Router5

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 18

Which networking function occurs on the data plane?

- A. forwarding remote client/server traffic
- B. facilitates spanning-tree elections
- C. processing inbound SSH management traffic
- D. sending and receiving OSPF Hello packets

Correct Answer: A

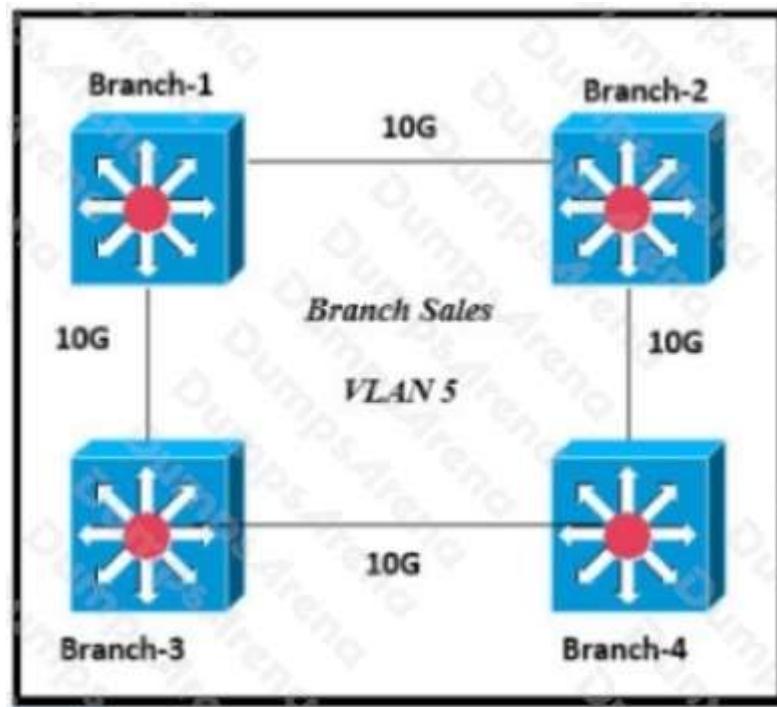

Section: (none)

Explanation

Explanation/Reference:

QUESTION 19

Refer to the exhibit.

Only four switches are participating in the VLAN spanning-tree process.

Branch-1 priority 614440

Branch-2: priority 39082416

Branch-3: priority 0

Branch-4: root primary

Which switch becomes the permanent root bridge for VLAN 5?

- A. Branch-1
- B. Branch-2
- C. Branch-3
- D. Branch-4

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 20

Which two tasks must be performed to configure NTP to a trusted server in client mode on a single network device? (Choose two)

- A. Enable NTP authentication.
- B. Verify the time zone.
- C. Disable NTP broadcasts
- D. Specify the IP address of the NTP server
- E. Set the NTP server private key

Correct Answer: AD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 21

Refer to the exhibit.

```
SiteA#show interface TenGigabitEthernet0/1/0
TenGigabitEthernet0/1/0 is up, line protocol is up
  Hardware is BUILT-IN-EPA-8x10G, address is 780c.f02a.db91 (bia 780a.f02b.db91)
  Description: Connection to SiteB
  Internet address is 10.10.10.1/30
  MTU 8146 bytes, BW 10000000 Kbit/sec, DLY 10 usec,
    reliability 166/255, txload 1/255, rxload 1/255
  Full Duplex, 10000Mbps, link type is force-up, media type is SFP-LR
  5 minute input rate 264797000 bits/sec, 26672 packets/sec
  5 minute output rate 122464000 bits/sec, 15724 packets/sec

SiteB#show interface TenGigabitEthernet0/1/0
TenGigabitEthernet0/1/0 is up, line protocol is up
  Hardware is BUILT-IN-EPA-8x10G, address is 780c.f02c.db26 (bia 780c.f02c.db26)
  Description: Connection to SiteA
  Internet address is 10.10.10.2/30
  MTU 8146 bytes, BW 10000000 Kbit/sec, DLY 10 usec,
    reliability 255/255, txload 1/255, rxload 1/255
  Full Duplex, 10000Mbps, link type is force-up, media type is SFP-LR
  5 minute input rate 122464000 bits/sec, 15724 packets/sec
  5 minute output rate 264797000 bits/sec, 26672 packets/sec
```

Shortly after SiteA was connected to SiteB over a new single-mode fiber path users at SiteA report intermittent connectivity issues with applications hosted at SiteB. What is the cause of the intermittent connectivity issue?

- A. Interface errors are incrementing
- B. An incorrect SFP media type was used at SiteA
- C. High usage is causing high latency
- D. The sites were connected with the wrong cable type

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 22

Where does a switch maintain DHCP snooping information?

- A. in the MAC address table
- B. in the CAM table
- C. in the binding database
- D. in the frame forwarding database

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 23

Refer to the exhibit.

```
SW1#show run int gig 0/1
interface GigabitEthernet0/1
  switchport access vlan 11
  switchport trunk allowed vlan 1-10
  switchport trunk encapsulation dot1q
  switchport trunk native vlan 5
  switchport mode trunk
  speed 1000
  duplex full
```

Which action is expected from SW1 when the untagged frame is received on the GigabitEthernet0/1 interface?

- A. The frame is processed in VLAN 5.
- B. The frame is processed in VLAN 11
- C. The frame is processed in VLAN 1
- D. The frame is dropped

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 24

Refer to the exhibit.

```
SW1#sh lacp neighbor
Flags: S - Device is requesting Slow LACPDU
      F - Device is requesting Fast LACPDU
      A - Device is in Active mode      P - Device is in Passive mode
```

Channel group 35 neighbors

Partner's information:

Port	Flags	Priority	LACP port	Dev ID	Age	Admin key	Oper key	Port Number	Port State
Et1/0	SP	32768		aabb.cc80.7000	8s	0x0	0x23	0x101	0x3C
Et1/1	SP	32768		aabb.cc80.7000	8s	0x0	0x23	0x102	0x3C

Based on the LACP neighbor status, in which mode is the SW1 port channel configured?

- A. passive
- B. mode on
- C. auto
- D. active

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 25

(DRAG DROP)

Refer to the exhibit.

```
[root@HostTest ~]# ip route
default via 192.168.1.193 dev eth1 proto static
192.168.1.0/26 dev eth1 proto kernel scope link src 192.168.1.200 metric 1

[root@HostTest ~]# ip addr show eth1
eth1: mtu 1500 qdisc pfifo_fast qlen 1000
    link/ether 00:0C:22:83:79:A3 brd ff:ff:ff:ff:ff:ff
    inet 192.168.1.200/26 brd 192.168.1.255 scope global eth1
        inet6 fe80::20c:29ff:fe89:79b3/64 scope link
            valid_lft forever preferred_lft forever
```

Drag and drop the networking parameters from the left onto the correct values on the right.

default gateway	00:0C:22
host IP address	00:0C:22:83:79:A3
NIC MAC address	192.168.1.193
NIC vendor OUI	192.168.1.200
subnet mask	255.255.255.192

Answer:

A.

default gateway	NIC vendor OUI
host IP address	NIC MAC address
NIC MAC address	default gateway
NIC vendor OUI	host IP address
subnet mask	subnet mask

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 26

Which result occurs when PortFast is enabled on an interface that is connected to another switch?

- A. Spanning tree may fail to detect a switching loop in the network that causes broadcast storms
- B. VTP is allowed to propagate VLAN configuration information from switch to switch automatically.
- C. Root port choice and spanning tree recalculation are accelerated when a switch link goes down
- D. After spanning tree converges PortFast shuts down any port that receives BPDUs.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 27

What is the primary difference between AAA authentication and authorization?

- A. Authentication verifies a username and password, and authorization handles the communication between the authentication agent and the user database.
- B. Authentication identifies a user who is attempting to access a system, and authorization validates the user's password.
- C. Authentication identifies and verifies a user who is attempting to access a system, and authorization controls the tasks the user can perform.
- D. Authentication controls the system processes a user can access and authorization logs the activities the user initiates.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 28

A network administrator must configure SSH for remote access to router R1. The requirement is to use a public and private key pair to encrypt management traffic to and from the connecting client.

Which configuration, when applied, meets the requirements?

```
R1#enable
R1#configure terminal
R1(config)#ip domain-name cisco.com
R1(config)#crypto key generate ec keysiz 2048
```

```
R1#enable
R1#configure terminal
R1(config)#ip domain-name cisco.com
R1(config)#crypto key generate rsa modulus 1024
```

```
R1#enable
R1#configure terminal
R1(config)#ip domain-name cisco.com
R1(config)#crypto key generate ec keysiz 1024
```

```
R1#enable
R1#configure terminal
R1(config)#ip domain-name cisco.com
R1(config)#crypto key encrypt rsa name myKey
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 29

A network engineer must configure the router R1 GigabitEthernet1/1 interface to connect to the router R2 GigabitEthernet1/1 interface. For the configuration to be applied the engineer must compress the address 2001:0db8:0000:0000:0500:000a:400F:583B. Which command must be issued on the interface?

- A. ipv6 address 2001:0db8::5: a: 4F 583B
- B. ipv6 address 2001:db8::500:a:400F:583B
- C. ipv6 address 2001 db8:0::500:a:4F:583B
- D. ipv6 address 2001::db8:0000::500:a:400F:583B

Correct Answer: B

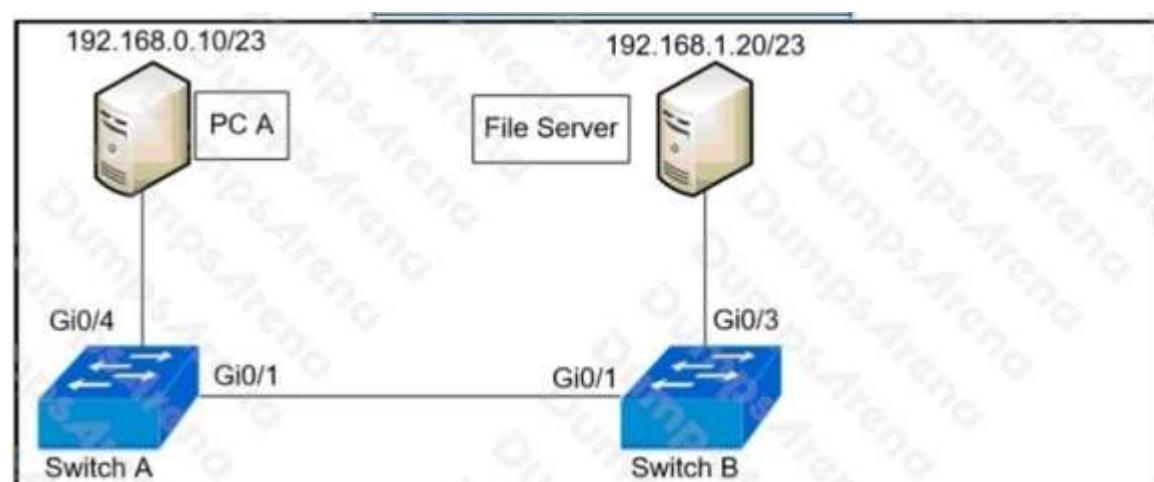

Section: (none)

Explanation

Explanation/Reference:

QUESTION 30

Refer to the exhibit.

Switch A Vlan 10,11,12,13	Switch B Vlan 10,11,12,13
interface GigabitEthernet0/1 switchport mode trunk switchport trunk allowed vlan 10-12 ! interface GigabitEthernet0/4 switchport access vlan 13 switchport mode access	interface GigabitEthernet0/1 switchport mode trunk ! interface GigabitEthernet0/3 switchport access vlan 13 switchport mode access

A network administrator assumes a task to complete the connectivity between PC A and the File Server. Switch A and Switch B have been partially configured with VLAN 10, 11, 12, and 13. What is the next step in the configuration?

- A. Add PC A to VLAN 10 and the File Server to VLAN 11 for VLAN segmentation
- B. Add VLAN 13 to the trunk links on Switch A and Switch B for VLAN propagation
- C. Add a router on a stick between Switch A and Switch B allowing for Inter-VLAN routing.
- D. Add PC A to the same subnet as the File Server allowing for intra-VLAN communication.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 31

Which goal is achieved by the implementation of private IPv4 addressing on a network?

- A. provides an added level of protection against Internet exposure
- B. provides a reduction in size of the forwarding table on network routers
- C. allows communication across the Internet to other private networks
- D. allows servers and workstations to communicate across public network boundaries

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 32

What is a characteristic of spine-and-leaf architecture?

- A. Each device is separated by the same number of hops
- B. It provides variable latency
- C. It provides greater predictability on STP blocked ports.
- D. Each link between leaf switches allows for higher bandwidth.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 33

A router running EIGRP has learned the same route from two different paths. Which parameter does the router use to select the best path?

- A. cost
- B. administrative distance
- C. metric
- D. as-path

Correct Answer: C

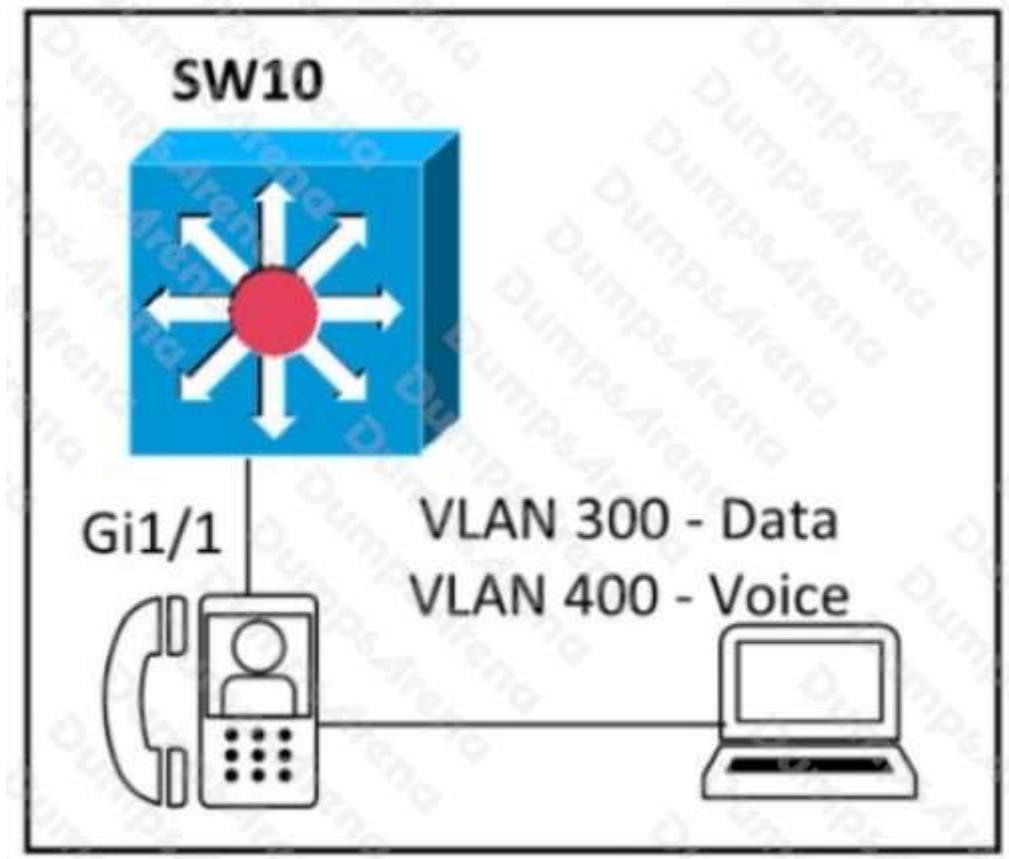

Section: (none)

Explanation

Explanation/Reference:

QUESTION 34

Refer to the exhibit.

An engineer must configure GigabitEthernet1/1 to accommodate voice and data traffic. Which configuration accomplishes this task?

```
interface gigabitethernet1/1
switchport mode access
switchport access vlan 300
switchport voice vlan 400
```

```
interface gigabitethernet1/1
switchport mode trunk
switchport trunk vlan 300
switchport voice vlan 400
```

```
interface gigabitethernet1/1
switchport mode trunk
switchport trunk vlan 300
switchport trunk vlan 400
```

```
interface gigabitethernet1/1
switchport mode access
switchport voice vlan 300
switchport access vlan 400
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 35

Refer to the exhibit.

Designated Router (ID) 10.11.11.11, Interface address 10.10.10.1
Backup Designated router (ID) 10.3.3.3, Interface address 10.10.10.3
Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
oob-resync timeout 40
Hello due in 00:00:08
Supports Link-local Signaling (LLS)
Cisco NSF helper support enabled
IETF NSF helper support enabled
Index 1/1/1, flood queue length 0
Next 0x0(0)/0x0(0)/0x0(0)
Last flood scan length is 1, maximum is 6
Last flood scan time is 0 msec, maximum is 1 msec
Neighbor Count is 3, Adjacent neighbor count is 3
Adjacent with neighbor 10.1.1.4
Adjacent with neighbor 10.2.2.2
Adjacent with neighbor 10.3.3.3 (Backup Designated Router)
Suppress hello for 0 neighbor(s)

The show ip ospf interface command has been executed on R1. How is OSPF configured?

- A. The interface is not participating in OSPF
- B. A point-to-point network type is configured
- C. The default Hello and Dead timers are in use
- D. There are six OSPF neighbors on this interface

Correct Answer: C

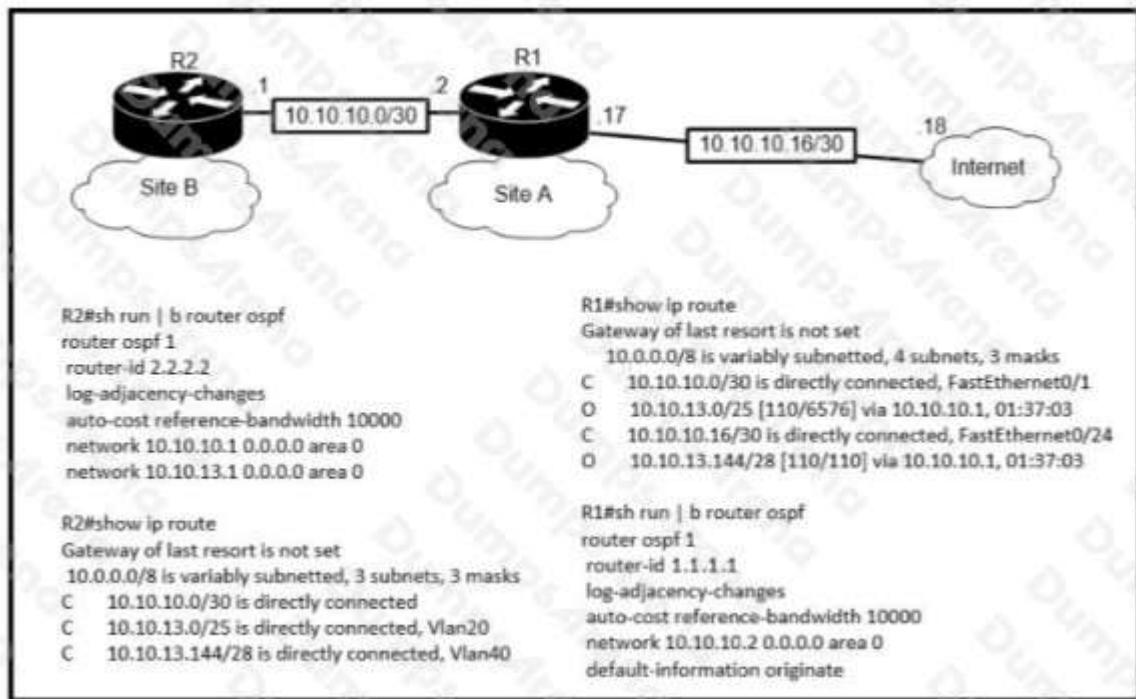

Section: (none)

Explanation

Explanation/Reference:

QUESTION 36

Refer to the exhibit.

An engineer is bringing up a new circuit to the MPLS provider on the Gi0/1 interface of Router1. The new circuit uses eBGP and teams the route to VLAN25 from the BGP path. What's the expected behavior for the traffic flow for route 10.10.13.0/25?

- A. Traffic to 10.10.13.0.25 is load balanced out of multiple interfaces
- B. Route 10.10.13.0/25 is updated in the routing table as being learned from interface Gi0/1.
- C. Traffic to 10.10.13.0/25 is asymmetrical
- D. Route 10.10.13.0/25 learned via the Gi0/0 interface remains in the routing table

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 37

Refer to the exhibit.

```

R1# show ip route | begin gateway
Gateway of last resort is 209.165.200.246 to network 0.0.0.0
S* 0.0.0.0/0 [1/0] via 209.165.200.246, Serial0/1/0
  is directly connected, Serial0/1/0
  172.16.0.0/16 is variably subnetted, 3 subnets, 3 masks
  S  172.16.0.0/24 [1/0] via 207.165.200.250, Serial0/0/0
  O  172.16.0.128/25 [110/38443] via 207.165.200.254, 00:00:23, Serial0/0/1
  D  172.16.0.192/29 [90/3184439] via 207.165.200.254, 00:00:25, Serial0/0/1
  209.165.200.0/24 is variably subnetted, 4 subnets, 2 masks
  C  209.165.200.248/30 is directly connected, Serial0/0/0
  L  209.165.200.249/32 is directly connected, Serial0/0/0
  C  209.165.200.252/30 is directly connected, Serial0/0/1
  L  209.165.200.253/32 is directly connected, Serial0/0/1

```

With which metric was the route to host 172.16.0.202 learned?

- A. 0
- B. 110
- C. 38443
- D. 3184439

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 38

Refer to the exhibit.

```
R1# show ip route
***  
D 172.16.32.0/27 [90/2888597172] via 20.1.1.1  
O 172.16.32.0/19 [110/292094] via 20.1.1.10  
R 172.16.32.0/24 [120/2] via 20.1.1.3
```

Router R1 is running three different routing protocols. Which route characteristic is used by the router to forward the packet that it receives for destination IP 172.16.32.1?

- A. longest prefix
- B. metric
- C. cost
- D. administrative distance

Correct Answer: A

Section: (none)

Explanation/Reference:

QUESTION 40

An administrator must secure the WLC from receiving spoofed association requests. Which steps must be taken to configure the WLC to restrict the requests and force the user to wait 10 ms to retry an association request?

- A. Enable Security Association Teardown Protection and set the SA Query timeout to 10
- B. Enable MAC filtering and set the SA Query timeout to 10
- C. Enable 802.1x Layer 2 security and set me Comeback timer to 10
- D. Enable the Protected Management Frame service and set the Comeback timer to 10

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 41

Which function does an SNMP agent perform?

- A. it sends information about MIB variables in response to requests from the NMS
- B. it requests information from remote network nodes about catastrophic system events.
- C. it manages routing between Layer 3 devices in a network
- D. it coordinates user authentication between a network device and a TACACS+ or RADIUS server

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 42

What is the effect when loopback interfaces and the configured router ID are absent during the OSPF Process configuration?

- A. No router ID is set, and the OSPF protocol does not run.
- B. The highest up/up physical interface IP address is selected as the router ID.
- C. The lowest IP address is incremented by 1 and selected as the router ID.
- D. The router ID 0.0.0.0 is selected and placed in the OSPF process.

Correct Answer: B

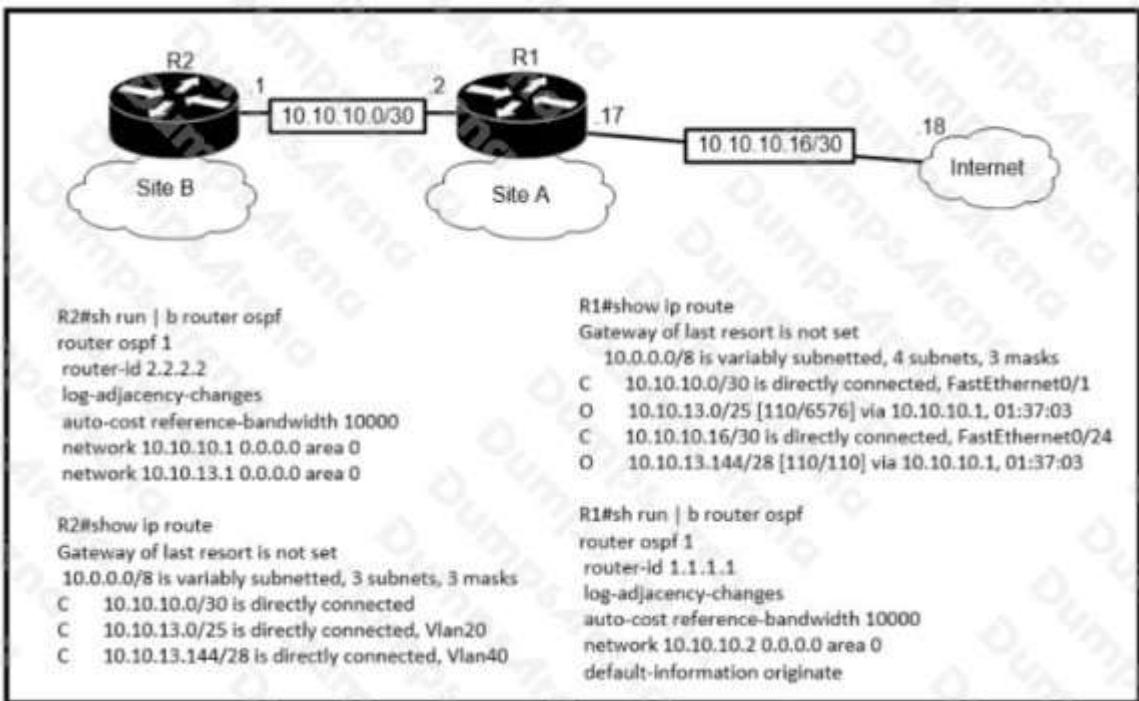

Section: (none)

Explanation

Explanation/Reference:

QUESTION 43

Refer to the exhibit.

The default-information originate command is configured under the R1 OSPF configuration. After testing, workstations on VLAN 20 at Site B cannot reach a DNS server on the Internet. Which action corrects the configuration issue?

- A. Add the default-information originate command on R2
- B. Configure the ip route 0.0.0.0 0.0.0.0 10.10.10.18 command on R1
- C. Configure the ip route 0.0.0.0 0.0.0.0 10.10.10.2 command on R2
- D. Add the always keyword to the default-information originate command on R1

Correct Answer: B

Section: (none)

QUESTION 44

Refer to Exhibit.

```

SW2
vtp domain cisco
vtp mode transparent
vtp password ciscotest
interface fastethernet0/1
  description connection to sw1
  switchport mode trunk
  switchport trunk encapsulation dot1q
  
```

How does SW2 interact with other switches in this VTP domain?

- A. It processes VTP updates from any VTP clients on the network on its access ports.

- B. It receives updates from all VTP servers and forwards all locally configured VLANs out all trunk ports
- C. It forwards only the VTP advertisements that it receives on its trunk ports.
- D. It transmits and processes VTP updates from any VTP Clients on the network on its trunk ports

Correct Answer: C

QUESTION 45

Which condition must be met before an NMS handles an SNMP trap from an agent?

- A. The NMS software must be loaded with the MIB associated with the trap.
- B. The NMS must be configured on the same router as the SNMP agent
- C. The NMS must receive a trap and an inform message from the SNMP agent within a configured interval
- D. The NMS must receive the same trap from two different SNMP agents to verify that it is reliable.

Correct Answer: A

QUESTION 46

Refer to the exhibit.

Router R1 Fa0/0 is unable ping router R3 Fa0/1.

Which action must be taken in router R1 to help resolve the configuration issue?

- A. set the default network as 20.20.20.0/24
- B. set the default gateway as 20.20.20.2
- C. configure a static route with Fa0/1 as the egress interface to reach the 20.20.20.0/24 network
- D. configure a static route with 10.10.10.2 as the next hop to reach the 20.20.20.0/24 network

Correct Answer: D

QUESTION 49

An engineer is configuring NAT to translate the source subnet of 10.10.0.0/24 to any of three addresses 192.168.30.1, 192.168.3.2, 192.168.3.3 Which configuration should be used?

```
enable
configure terminal
ip nat pool mypool 192.168.3.1 192.168.3.3 prefix-length 30
route-map permit 10.10.0.0 255.255.255.0
ip nat outside destination list 1 pool mypool
interface g1/1
ip nat inside
interface g1/2
ip nat outside
```

```
enable
configure terminal
ip nat pool mypool 192.168.3.1 192.168.3.3 prefix-length 30
access-list 1 permit 10.10.0.0 0.0.0.255
ip nat inside source list 1 pool mypool
interface g1/1
ip nat inside
interface g1/2
ip nat outside
```

```
enable
configure terminal
ip nat pool mypool 192.168.3.1 192.168.3.3 prefix-length 30
access-list 1 permit 10.10.0.0 0.0.0.255
ip nat outside destination list 1 pool mypool
interface g1/1
ip nat inside
interface g1/2
ip nat outside
```

```
enable
configure terminal
ip nat pool mypool 192.168.3.1 192.168.3.3 prefix-length 30
access-list 1 permit 10.10.0.0 0.0.0.254
ip nat inside source list 1 pool mypool
interface g1/1
ip nat inside
interface g1/2
ip nat outside
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

QUESTION 63

An engineer must configure traffic for a VLAN that is untagged by the switch as it crosses a trunk link. Which command should be used?

- A. switchport trunk allowed vlan 10
- B. switchport trunk native vlan 10
- C. switchport mode trunk
- D. switchport trunk encapsulation dot1q

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 64

While examining excessive traffic on the network, it is noted that all incoming packets on an interface appear to be allowed even though an IPv4 ACL is applied to the interface.

Which two misconfigurations cause this behavior? (Choose two)

- A. The packets fail to match any permit statement
- B. A matching permit statement is too high in the access test

- C. A matching permit statement is too broadly defined
- D. The ACL is empty
- E. A matching deny statement is too high in the access list

QUESTION 87
 - (DRAG DROP)

Drag and drop the lightweight access point operation modes from the left onto the descriptions on the right

bridge mode	allows the access point to communicate with the WLC over a WAN link
local mode	allows for packet captures of wireless traffic
monitor mode	rogue detector mode
Flexconnect mode	preferred for connecting access points in a mesh environment
sniffer mode	receive only mode which acts as a dedicated sensor for RFID and IDS
	transmits normally on one channel and monitors other channels for noise and interference

Answer:

A.

bridge mode	local mode
local mode	sniffer mode
monitor mode	rogue detector mode
Flexconnect mode	bridge mode
sniffer mode	Flexconnect mode
	monitor mode

Correct Answer: A

QUESTION 95

A Cisco engineer must configure a single switch interface to meet these requirements

- accept untagged frames and place them in VLAN 20
- accept tagged frames in VLAN 30 when CDP detects a Cisco IP phone

Which command set must the engineer apply?

- A. **switchport mode dynamic desirable**
switchport access vlan 20
switchport trunk allowed vlan 30
switchport voice vlan 30
- B. **switchport mode dynamic auto**
switchport trunk native vlan 20
switchport trunk allowed vlan 30
switchport voice vlan 30
- C. **switchport mode access**
switchport access vlan 20
switchport voice vlan 30
- D. **switchport mode trunk**
switchport access vlan 20
switchport voice vlan 30

Correct Answer: C

QUESTION 102

An engineer is configuring remote access to a router from IP subnet 10.139.58.0/28. The domain name, crypto keys, and SSH have been configured. Which configuration enables the traffic on the destination router?

- A.

```
interface FastEthernet0/0
  ip address 10.122.49.1 255.255.255.240
  access-group 120 in

  ip access-list extended 120
  permit tcp 10.139.58.0 255.255.255.248 any eq 22
```

- B.

```
interface FastEthernet0/0
  ip address 10.122.49.1 255.255.255.252
  ip access-group 110 in

  ip access-list extended 110
  permit tcp 10.139.58.0 0.0.0.15 host 10.122.49.1 eq 22
```

- C.

```
interface FastEthernet0/0
  ip address 10.122.49.1 255.255.255.248
  ip access-group 10 in

  ip access-list standard 10
  permit udp 10.139.58.0 0.0.0.7 host 10.122.49.1 eq 22
```

- D.

```
interface FastEthernet0/0
  ip address 10.122.49.1 255.255.255.252
  ip access-group 105 in

  ip access-list standard 105
  permit tcp 10.139.58.0 0.0.0.7 eq 22 host 10.122.49.1
```

QUESTION 105

- (DRAG DROP)

Drag and drop the statements about networking from the left onto the corresponding networking types on the right.

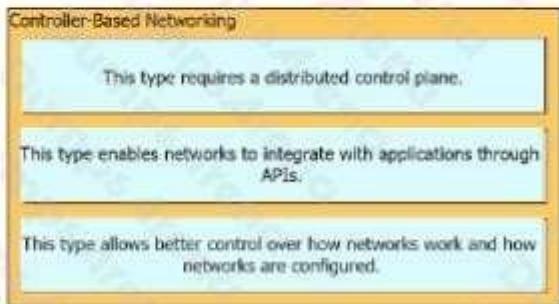

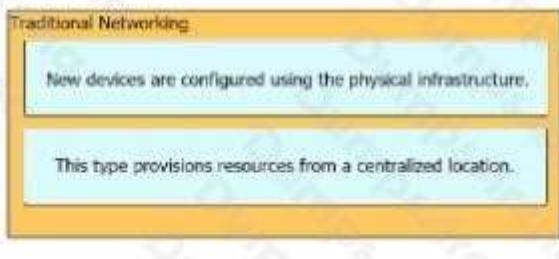

- This type allows better control over how networks work and how networks are configured.
- This type enables networks to integrate with applications through APIs.
- New devices are configured using the physical infrastructure.
- This type provisions resources from a centralized location.
- This type requires a distributed control plane.

Answer:

A.

- This type allows better control over how networks work and how networks are configured.
- This type enables networks to integrate with applications through APIs.
- New devices are configured using the physical infrastructure.
- This type provisions resources from a centralized location.
- This type requires a distributed control plane.

Correct Answer: A

QUESTION 107

Refer to the exhibit.

```
Hardware is ISR4331-3x1GE, address is 5486.bc25.1f70 (bia 5486.bc25.1f70)
Description: << WAN Link >>
Internet address is 192.0.2.2/30
MTU 1500 bytes, BW 1000000 Kbit/sec, DLY 10 usec,
    reliability 255/255, txload 1/255, rxload 1/255
Encapsulation ARPA, loopback not set
Keepalive not supported
Full Duplex, 1000Mbps, link type is auto, media type is RJ45
output flow-control is off, input flow-control is off
ARP type: ARPA, ARP Timeout 04:00:00
Last input 00:00:00, output 00:00:11, output hang never
Last clearing of "show interface" counters never
Input queue: 0/375/0/0 (size/max/drops/flushes); Total output drops: 0
Queueing strategy: fifo
Output queue: 0/40 (size/max)
5 minute input rate 7000 bits/sec, 4 packets/sec
5 minute output rate 4000 bits/sec, 4 packets/sec
    22579370 packets input, 8825545968 bytes, 0 no buffer
    Received 67 broadcasts (0 IP multicasts)
    0 runts, 0 giants, 0 throttles
    3612699 input errors, 3612699 CRC, 0 frame, 0 overrun, 0 ignored
    0 watchdog, 10747057 multicast, 0 pause input
    12072167 packets output, 1697953637 bytes, 0 underruns
    0 output errors, 0 collisions, 1 interface resets
    6 unknown protocol drops
    0 babbles, 0 late collision, 0 deferred
    5 lost carrier, 0 no carrier, 0 pause output
    0 output buffer failures, 0 output buffers swapped out
```

What is a reason for poor performance on the network interface?

- A. The interface is receiving excessive broadcast traffic.
- B. The cable connection between the two devices is faulty.
- C. The interface is operating at a different speed than the connected device.
- D. The bandwidth setting of the interface is misconfigured

Correct Answer: A

Explanation/Reference:

QUESTION 108

Refer to the exhibit.

```
Switch2# show lldp
Global LLDP Information
  Status: ACTIVE
  LLDP advertisements are sent every 30 seconds
  LLDP hold time advertised is 120 seconds
  LLDP interface reinitialization delay is 2 seconds
```

A network engineer must update the configuration on Switch2 so that it sends LLDP packets every minute and the information sent via LLDP is refreshed every 3 minutes. Which configuration must the engineer apply?

- A. Switch2(config)#lldp timer 60
Switch2(config)#lldp holdtime 180
- B. Switch2(config)#lldp timer 60
Switch2(config)#lldp tlv-select 180
- C. Switch2(config)#lldp timer 1
Switch2(config)#lldp holdtime 3
- D. Switch2(config)#lldp timer 1
Switch2(config)#lldp tlv-select 3

Correct Answer: A

Explanation

Explanation/Reference:

QUESTION 131

Refer to the exhibit.

The following must be considered:

- SW1 is fully configured for all traffic
- The SW4 and SW9 links to SW1 have been configured
- The SW4 interface Gi0/1 and Gi0/0 on SW9 have been configured
- The remaining switches have had all VLANs added to their VLAN database

Which configuration establishes a successful ping from PC2 to PC7 without interruption to traffic flow between other PCs?

A.

```

SW4#
  interface Gi0/2
    switchport mode trunk
    switchport trunk allowed vlan 14

SW11#
  interface Gi0/1
    switchport mode trunk
    switchport trunk allowed vlan 14

SW9#
  interface Gi0/2
    switchport mode trunk
    switchport trunk allowed vlan 108

```

B. SW4#

QUESTION 132

R1 as an NTP server must have:

- NTP authentication enabled

- NTP packets sourced from Interface loopback 0
- NTP stratum 2
- NTP packets only permitted to client IP 209.165.200.225

How should R1 be configured?

- A.

```
ntp authenticate
ntp authentication-key 2 md5 CISCO123
ntp source Loopback0
ntp access-group server-only 10
ntp master 2
!
access-list 10 permit 209.165.200.225
```
- B.

```
ntp authenticate
ntp authentication-key 2 md5 CISCO123
ntp source Loopback0
ntp access-group server-only 10
ntp stratum 2
!
access-list 10 permit udp host 209.165.200.225 any eq 123
```
- C.

```
ntp authenticate
ntp authentication-key 2 sha1 CISCO123
ntp source Loopback0
ntp access-group server-only 10
ntp master 2
!
access-list 10 permit udp host 209.165.200.225 any eq 123
```
- D.

```
ntp authenticate
ntp authentication-key 2 md5 CISCO123
ntp interface Loopback0
ntp access-group server-only 10
```

Correct Answer: B

QUESTION 137

Refer to the exhibit.

```
CPE# show ip route
  192.168.1.0/24 is variably subnetted, 3 subnets, 3 masks
B  192.168.1.0/24 [20/1] via 192.168.12.2, 00:00:06
R  192.168.1.128/25 [120/5] via 192.168.13.3, 00:02:35, Ethernet0/1
O  192.168.1.192/26 [110/11] via 192.168.14.4, 00:02:23, Ethernet0/2
D  192.168.1.224/27 [90/1024640] via 192.168.15.5, 00:01:40, Ethernet0/3
```

All traffic enters the CPE router from interface Serial0/3 with an IP address of 192 168 50 1 Web traffic from the WAN is destined for a LAN network where servers are load-balanced An IP packet with a destination address of the HTTP virtual IP of 192 1681 250 must be forwarded Which routing table entry does the router use?

- A. 192.168.1.0/24 via 192.168.12.2
- B. 192.168.1.128/25 via 192.168.13.3
- C. 192.168.1.192/26 via 192.168.14.4
- D. 192.168.1.224/27 via 192.168.15.5

Correct Answer: B

Section: (none)**Explanation****Explanation/Reference:****QUESTION 138**

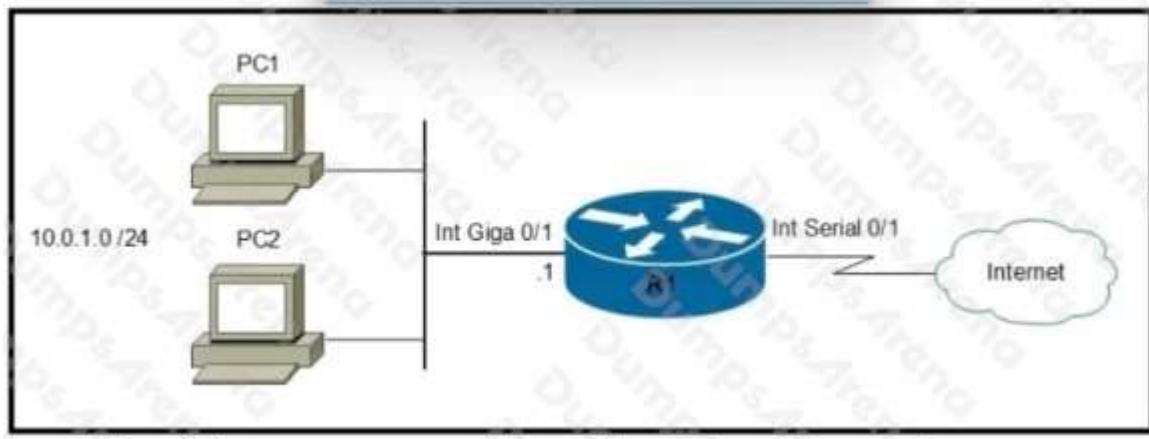

Which interface mode must be configured to connect the lightweight APs in a centralized architecture?

- A. WLAN dynamic
- B. management
- C. trunk
- D. access

Correct Answer: D

QUESTION 158

Refer to the exhibit.

Host A sent a data frame destined for host D

```
SwitchA#show mac-address table
Mac Address Table
-----
Vlan  Mac Address      Type      Ports
2     000c.859c.bb7b  DYNAMIC   Fa0/1
2     0010.11dc.3e91  DYNAMIC   Fa0/2
2     0041.45d7.0451  DYNAMIC   Fa0/3
SwitchA#
```

What does the switch do when it receives the frame from host A?

- A. It drops the frame from the switch CAM table.
- B. It floods the frame out of all ports except port Fa0/1.
- C. It shuts down the port Fa0/1 and places it in err-disable mode.
- D. It experiences a broadcast storm.

DHCP snooping is configured on following VLANs:
1
DHCP snooping is operational on following VLANs:
1
DHCP snooping is configured on the following L3 Interfaces:
Insertion of option 82 is disabled
circuit-id default format: vlan-mod-port
remote-id: aabb.cc00.6500 (MAC)
Option 82 on untrusted port is not allowed
Verification of hwaddr field is enabled
Verification of giaddr field is enabled
DHCP snooping trust/rate is configured on the following interfaces:
Interface Trusted Allow option Rate limit (pps)

```

```

Switch#show ip dhcp snooping statistics detail
Packets Processed by DHCP Snooping = 34
Packets Dropped Because
IDB not known = 0
Queue full = 0
Interface is in errdisabled = 0
Rate limit exceeded = 0
Received on untrusted ports = 32
Nonzero giaddr = 0
Source mac not equal to chaddr = 0
No binding entry = 0
Insertion of opt82 fail = 0
Unknown packet = 0
Interface Down = 0
Unknown output interface = 0
Misdirected Packets = 0
Packets with Invalid Size = 0
Packets with Invalid Option = 0

```

The DHCP server and clients are connected to the same switch. What is the next step to complete the DHCP configuration to allow clients on VLAN 1 to receive addresses from the DHCP server?

- A. Configure the ip dhcp snooping trust command on the interface that is connected to the DHCP client.
- B. Configure the ip dhcp relay information option command on the interface that is connected to the DHCP client.
- C. Configure the ip dhcp snooping trust command on the interface that is connected to the DHCP server.
- D. Configure the ip dhcp relay information option command on the interface that is connected to the DHCP server.

Correct Answer: C

QUESTION 173

What provides centralized control of authentication and roaming In an enterprise network?

- A. a lightweight access point
- B. a firewall
- C. a wireless LAN controller
- D. a LAN switch

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 174

Refer to the exhibit.

```
R1# show ip route
Codes: C - connected, S - static, I - IGRP, R - RIP, M - mobile, B - BGP
      D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
      N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
      E1 - OSPF external type 1, E2 - OSPF external type 2, E - EGP
      i - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, * - candidate
      default
      U - per-user static route, o - ODR
Gateway of last resort is not set
C 192.168.3.5 is directly connected, Loopback0
  10.0.0.0/8 is variably subnetted, 4 subnets, 2 masks
  O  10.0.1.3/32 [110/100] via 192.168.0.40, 00:39:08, Serial0
  C  10.0.1.0/24 is directly connected, Serial0
  O  10.0.1.190/32 [110/5] via 192.168.0.35, 00:39:08, Serial0
  O  10.0.1.0/24 [110/10] via 192.168.0.4, 00:39:08, Gigabit Ethernet 0/0
  D  10.0.1.0/28 [90/10] via 192.168.0.7, 00:39:08, Gigabit Ethernet 0/0
```

Traffic sourced from the loopback0 Interface is trying to connect via ssh to the host at 10.0.1.15. What is the next hop to the destination address?

- A. 192.168.0.7
- B. 192.168.0.4
- C. 192.168.0.40
- D. 192.168.3.5

Correct Answer: B

QUESTION 177

- (DRAG DROP)

Drag and drop the TCP or UDP details from the left onto their corresponding protocols on the right.

- transmitted based on data contained in the packet without the need for a data channel
- requires the client and the server to establish a connection before sending the packet
- used to reliably share files between devices
- appropriate for streaming operations with minimal latency

Answer:

A.

transmitted based on data contained in the packet without the need for a data channel	TCP	requires the client and the server to establish a connection before sending the packet
requires the client and the server to establish a connection before sending the packet		used to reliably share files between devices
used to reliably share files between devices	UDP	transmitted based on data contained in the packet without the need for a data channel
appropriate for streaming operations with minimal latency		appropriate for streaming operations with minimal latency

QUESTION 196

A network engineer is replacing the switches that belong to a managed-services client with new Cisco Catalyst switches. The new switches will be configured for updated security standards, including replacing Telnet

services with encrypted connections and doubling the modulus size from 1024. Which two commands must the engineer configure on the new switches? (Choose two.)

- A. crypto key generate rsa general-keys modulus 1024
- B. transport input all
- C. crypto key generate rsa usage-keys
- D. crypto key generate rsa modulus 2048
- E. transport Input ssh

Correct Answer: AE

QUESTION 198

What is the role of disaggregation in controller-based networking?

- A. It divides the control-plane and data-plane functions.
- B. It summarizes the routes between the core and distribution layers of the network topology.
- C. It enables a network topology to quickly adjust from a ring network to a star network
- D. It streamlines traffic handling by assigning individual devices to perform either Layer 2 or Layer 3 functions.

Correct Answer: A

Section: (none)

QUESTION 199

- (DRAG DROP)

Drag and drop the IPv6 address details from the left onto the corresponding types on the right.

identifies an interface on an IPv6 device	Anycast
includes link-local and loopback addresses	
provides one-to-many communications	Multicast
used exclusively by a non-host device	
assigned to more than one interface	Unicast
derived from the FF00::/8 address range	

Answer:

A.

Identifies an interface on an IPv6 device	Anycast	provides one-to-many communications
includes link-local and loopback addresses		used exclusively by a non-host device
provides one-to-many communications	Multicast	assigned to more than one interface
used exclusively by a non-host device		derived from the FF00::/8 address range
assigned to more than one interface	Unicast	identifies an interface on an IPv6 device
derived from the FF00::/8 address range		includes link-local and loopback addresses

Correct Answer: A

QUESTION 212

Refer to the exhibit.

The image shows a screenshot of a Cisco Wireless Controller's configuration interface. The top navigation bar includes tabs for General, Security, QoS, Policy-Mapping, and Advanced. The Security tab is selected, and within it, the Layer 3 tab is active. The configuration pane shows the following settings:

- Layer 2 Security:** WPA+WPA2
- Security Type:** Enterprise
- MAC Filtering:** Enabled
- WPA+WPA2 Parameters:**
 - WPA Policy: Disabled
 - WPA2 Policy: Enabled
 - WPA2 Encryption: CCMP128(AES) is selected, while TKIP, CCMP256, GCMP128, and GCMP256 are disabled.
 - OSEN Policy: Not specified.
- Fast Transition:** Fast Transition is set to Disable.
- Protected Management Frame:** PMF is set to Disabled.
- Authentication Key Management:** 802.1X-SHA1 is selected, and the Enable checkbox is checked.

What must be configured to enable 802.11w on the WLAN?

- A. Set PMF to Required.
- B. Enable MAC Filtering.
- C. Enable WPA Policy.
- D. Set Fast Transition to Enabled

Correct Answer: A

Section: (none)

Explanation

QUESTION 213

Refer to the exhibit.

Security RADIUS Authentication Servers > New

AAA	Server Index (Priority)	1
RADIUS	Server IP Address (IPv4/IPv6)	192.168.25.2
	Shared Secret Format	ASCII
	Shared Secret	*****
	Confirm Shared Secret	*****
TACACS+	Key Wrap	<input type="checkbox"/> (Designed for 802.11i customers and requires a key wrap compliant RADIUS server.)
	Port Number	1812
	Server Status	Enabled
	Support for CoA	Disabled
	Server Timeout	2 seconds
	Network User	<input type="checkbox"/> Enable
	Management	<input type="checkbox"/> Enable
	Management Retransmit Timeout	2 seconds
	Tunnel Proxy	<input type="checkbox"/> Enable
	IPsec	<input type="checkbox"/> Enable

A network engineer configures the Cisco WLC to authenticate local wireless clients against a RADIUS server. Which task must be performed to complete the process?

- A. Change the Server Status to Disabled
- B. Select Enable next to Management
- C. Select Enable next to Network User
- D. Change the Support for CoA to Enabled.

Correct Answer: C

QUESTION 233

An engineer must configure neighbor discovery between the company router and an ISP

```
interface gigabitethernet0/0
description Circuit-ATT4203-21099
duplex full
speed 1000
media-type gbic
negotiation auto
lldp transmit
lldp receive
```

What is the next step to complete the configuration if the ISP uses a third-party router?

- A. Enable LLDP globally.
- B. Disable CDP on gi0/0.
- C. Enable LLDP TLVs on the ISP router.
- D. Disable auto-negotiation.

Correct Answer: A

Section: (none)

QUESTION 234

Refer to the exhibit.

```
SW1#show spanning-tree vlan 30

VLAN0030
Spanning tree enabled protocol rstp
Root ID    Priority          32798
            Address           0025.63e9.c800
            Cost              19
            Port              1 (FastEthernet 2/1)
Hello Time    2 sec
Max Age       30 sec
Forward Delay 20 sec

[Output suppressed]
```

What are two conclusions about this configuration? {Choose two.}

- A. The spanning-tree mode is Rapid PVST+.
- B. This is a root bridge.
- C. The root port is FastEthernet 2/1.
- D. The designated port is FastEthernet 2/1.
- E. The spanning-tree mode is PVST+.

Correct Answer: A

QUESTION 235

Refer to the exhibit.

All interfaces are configured with duplex auto and ip ospf network broadcast. Which configuration allows routers R14 and R86 to form an OSPFv2 adjacency and act as a central point for exchanging OSPF information between routers?

- A.

```
R14#
  interface FastEthernet0/0
    ip address 10.73.65.65 255.255.255.252
    ip ospf priority 0
    ip mtu 1500

    router ospf 10
    router-id 10.10.1.14
    network 10.10.1.14 0.0.0.0 area 0
    network 10.73.65.64 0.0.0.3 area 0

R86#
  interface FastEthernet0/0
    ip address 10.73.65.66 255.255.255.252
    ip mtu 1500

    router ospf 10
    router-id 10.10.1.86
    network 10.10.1.86 0.0.0.0 area 0
    network 10.73.65.64 0.0.0.3 area 0
```

B.

① R14#

```
interface Loopback0
ip ospf 10 area 0
```

```
interface FastEthernet0/0
```

```
ip address 10.73.65.65 255.255.255.252
ip ospf priority 255
ip ospf 10 area 0
ip mtu 1500
```

```
router ospf 10
```

```
router-id 10.10.1.14
```

R86#

```
interface Loopback0
ip ospf 10 area 0
```

```
interface FastEthernet0/0
```

```
ip address 10.73.65.66 255.255.255.252
ip ospf 10 area 0
ip mtu 1500
```

```
router ospf 10
```

```
router-id 10.10.1.86
```

C.

```
R14#
interface FastEthernet0/0
ip address 10.73.65.65 255.255.255.252
ip ospf priority 255
ip mtu 1500

router ospf 10
router-id 10.10.1.14
network 10.10.1.14 0.0.0.0 area 0
network 10.73.65.64 0.0.0.3 area 0
R86#
interface FastEthernet0/0
ip address 10.73.65.66 255.255.255.252
ip mtu 1400

router ospf 10
router-id 10.10.1.86
network 10.10.1.86 0.0.0.0 area 0
network 10.73.65.64 0.0.0.3 area 0
```

D.

```
R14#
interface Loopback0
ip ospf 10 area 0

interface FastEthernet0/0
ip address 10.73.65.65 255.255.255.252
ip ospf 10 area 0
ip mtu 1500

router ospf 10
ip ospf priority 255
router-id 10.10.1.14
R86#
interface Loopback0
ip ospf 10 area 0

interface FastEthernet0/0
ip address 10.73.65.66 255.255.255.252

QUESTION 261

Which encryption method is used by WPA3?

- A. PSK
- B. TKIP
- C. SAE

D. AES

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 262

What differentiates device management enabled by Cisco DNA Center from traditional campus device management?

- A. per-device
- B. centralized
- C. device-by-device hands-on
- D. CLI-oriented device

Correct Answer: B

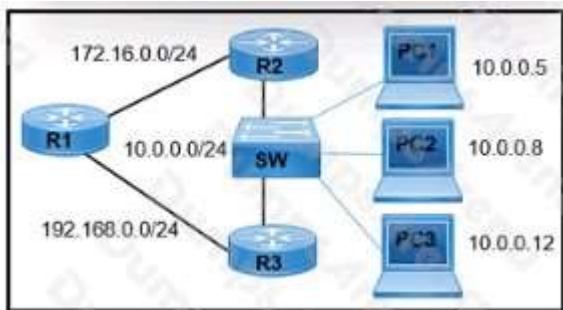

Section: (none)

Explanation

Explanation/Reference:

QUESTION 263

Refer to the exhibit.

A network engineer must configure R1 so that it sends all packets destined to the 10.0.0.0/24 network to R3, and all packets destined to PC1 to R2. Which configuration must the engineer implement?

- A.

```
R1(config)#ip route 10.0.0.0 255.255.255.0 172.16.0.2
R1(config)#ip route 10.0.0.5 255.255.255.255 192.168.0.2
```
- B.

```
R1(config)#ip route 10.0.0.0 255.255.0.0 172.16.0.2
R1(config)#ip route 10.0.0.5 255.255.255.255 192.168.0.2
```
- C.

```
R1(config)#ip route 10.0.0.0 255.255.255.0 192.168.0.2
R1(config)#ip route 10.0.0.5 255.255.255.255 172.16.0.2
```
- D.

```
R1(config)#ip route 10.0.0.0 255.255.0.0 192.168.0.2
R1(config)#ip route 10.0.0.0 255.255.255.0 172.16.0.2
```

Correct Answer: C

Explanation/Reference:

QUESTION 265

Refer to the exhibit.

An engineer must configure router R2 so it is elected as the DR on the WAN subnet. Which command sequence must be configured?

- A.

```
interface gigabitethernet0/0
ip address 10.0.0.34 255.255.255.224
ip ospf priority 100
```
- B.

```
interface gigabitethernet0/0
ip address 10.0.1.1 255.255.255.224
ip ospf priority 98
```

- C. **interface gigabitethernet0/0**
ip address 10.0.0.34 255.255.255.248
ip ospf priority 0

- D. **interface gigabitethernet0/0**
ip address 10.0.1.1 255.255.255.0
ip ospf priority 255

Correct Answer: A

Explanation

Explanation/Reference:

QUESTION 273

Refer to the exhibit.

```

Known via "connected", distance 0, metric 0 (connected, via interface)
Routing Descriptor Blocks:
 * directly connected, via Ethernet0/1
   Route metric is 0, traffic share count is 1

CPE# ping 203.0.113.1
Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 203.0.113.1, timeout is 2 seconds:
!!!!!
Success rate is 100 percent (5/5), round-trip min/avg/max = 1/1/1 ms

CPE# show ip route
Gateway of last resort is 198.51.100.1 to network 0.0.0.0
B*   0.0.0.0/0 [20/0] via 198.51.100.1, 00:02:07
      198.51.100.0/24 is variably subnetted, 2 subnets, 2 masks
C     198.51.100.0/30 is directly connected, Ethernet0/0
L     198.51.100.2/32 is directly connected, Ethernet0/0
      203.0.113.0/24 is variably subnetted, 2 subnets, 2 masks
C     203.0.113.0/30 is directly connected, Ethernet0/1
L     203.0.113.2/32 is directly connected, Ethernet0/1

```

After configuring a new static route on the CPE, the engineer entered this series of commands to verify that the new configuration is operating normally. When is the static default route installed into the routing table?

- A. when 203.0.113.1 is no longer reachable as a next hop
- B. when the default route learned over external BGP becomes invalid
- C. when a route to 203.0.113.1 is learned via BGP
- C. when the default route over external BGP changes its next hop

Correct Answer: A

QUESTION 300

Refer to the exhibit.

The screenshot shows the Cisco DNA Center interface for creating a new local network user. The left sidebar shows navigation options under the 'Security' tab, including AAA, RADIUS, TACACS+, LDAP, and various user-related policies. The main form is titled 'Local Net Users > New' and contains the following fields:

User Name	NA-User
Password	*****
Confirm Password	*****
Guest User	<input checked="" type="checkbox"/>
Lifetime (seconds)	86400
Guest User Role	<input type="checkbox"/>
WLAN Profile	Any WLAN
Description	For NA WLAN Auth

Wireless LAN access must be set up to force all clients from the NA WLAN to authenticate against the local database. The WLAN is configured for local EAP authentication. The time that users access the network must not be limited. Which action completes this configuration?

- Uncheck the Guest User check box
- Check the Guest User Role check box
- Set the Lifetime (seconds) value to 0

- D. Clear the Lifetime (seconds) value

Correct Answer: C

    [Id: 1] access-list LAN pool NATPOOL refcount 0
      pool NATPOOL: netmask 255.255.255.0
        start 198.51.100.11 end 198.51.100.20
        type generic, total addresses 10, allocated 0 (0%), misses 0

    Total doors: 0
    Appl doors: 0
    Normal doors: 0
    Queued Packets: 0
```

What is the next step to complete the implementation for the partial NAT configuration shown?

- A. Reconfigure the static NAT entries that overlap the NAT pool
- B. Configure the NAT outside interface
- C. Modify the access list for the internal network on e0/1
- D. Apply the ACL to the pool configuration

Correct Answer: A

QUESTION 305

- (DRAG DROP)

Drag and drop the Ansible features from the left to the right Not all features are used.

executes modules via SSH by default	feature
uses the YAML language	feature
uses agents to manage hosts	feature
pushes configurations to the client	feature
requires clients to pull configurations from the server	
operates without agents	

Answer:

A.

executes modules via SSH by default	operates without agents
uses the YAML language	executes modules via SSH by default
uses agents to manage hosts	uses agents to manage hosts
pushes configurations to the client	pushes configurations to the client
requires clients to pull configurations from the server	
operates without agents	

Correct Answer: A

QUESTION 306

The address block 192 168 32 0/24 must be subnetted into smaller networks. The engineer must meet these requirements

- Create 8 new subnets
- Each subnet must accommodate 30 hosts
- Interface VLAN 10 must use the last usable IP in the first new subnet

- A Layer 3 interface is used

Which configuration must be applied to the interface?

- A. `no switchport mode access`
`ip address 192.168.32.62 255.255.255.240`
- B. `switchport`
`ip address 192.168.32.65 255.255.255.240`
- C. `no switchport mode trunk`
`ip address 192.168.32.97 255.255.255.224`
- D. `no switchport`
`ip address 192.168.32.30 255.255.255.224`

Correct Answer: D

Section: (none)

Explanation

QUESTION 307

- (DRAG DROP)

Refer to the exhibit.

```
R1# show ip route | begin gateway
Gateway of last resort is not set
 172.16.0.0/16 is variably subnetted, 5 subnets, 5 masks
 0  172.16.2.128/25 [110/3184437] via 207.165.200.250, 00:00:25, Serial0/0/0
 0  172.16.3.64/27 [110/3184437] via 207.165.200.250, 00:00:25, Serial0/0/0
 0  172.16.3.128/28 [110/3184437] via 207.165.200.250, 00:00:25, Serial0/0/0
 0  172.16.3.192/29 [110/3184437] via 207.165.200.250, 00:00:25, Serial0/0/0
 0  172.16.4.0/23 [110/3184437] via 207.165.200.250, 00:00:25, Serial0/0/0
 207.165.200.0/24 is variably subnetted, 4 subnets, 2 masks
 C  207.165.200.248/30 is directly connected, Serial0/0/0
 L  207.165.200.249/32 is directly connected, Serial0/0/0
 C  207.165.200.252/30 is directly connected, Serial0/0/1
 L  207.165.200.253/32 is directly connected, Serial0/0/1
```

Drag and drop the learned prefixes from the left onto the subnet masks on the right

172.16.3.128	255.255.254.0
172.16.3.64	255.255.255.128
172.16.2.128	255.255.255.224
172.16.3.192	255.255.255.240
172.16.4.0	255.255.255.248

Answer:

A.

172.16.3.128	172.16.4.0
172.16.3.64	172.16.2.128
172.16.2.128	172.16.3.64
172.16.3.192	172.16.3.128
172.16.4.0	172.16.3.192

QUESTION 310

A Cisco engineer at a new branch office is configuring a wireless network with access points that connect to a controller that is based at corporate headquarters. Wireless client traffic must terminate at the branch office and access-point survivability is required in the event of a WAN outage. Which access point mode must be selected?

- A. Lightweight with local switching disabled
- B. Local with AP fallback enabled
- C. OfficeExtend with high availability disabled
- D. FlexConnect with local switching enabled

Correct Answer: C

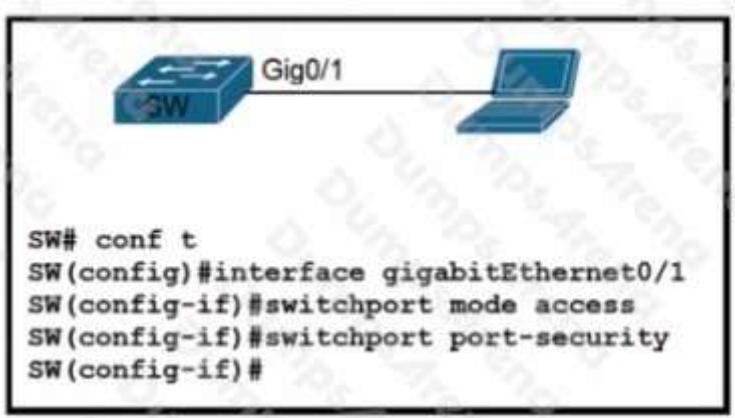

Section: (none)

Explanation

Explanation/Reference:

QUESTION 311

Refer to the exhibit.

A network engineer started to configure port security on a new switch. These requirements must be met:

- * MAC addresses must be learned dynamically
- * Log messages must be generated without disabling the interface when unwanted traffic is seen

Which two commands must be configured to complete this task"? (Choose two)

- A. SW(config-if)=switchport port-security mac-address sticky
- B. SW(config-if)=switchport port-security violation restrict
- C. SW(config-if)sswitchport port-security mac-address 0010.7B84.45E6
- D. SW(config-if)aswitchport port-security maximum 2
- E. SW(config-if)=switchport port-security violation shutdown

Correct Answer: C

Section: (none)

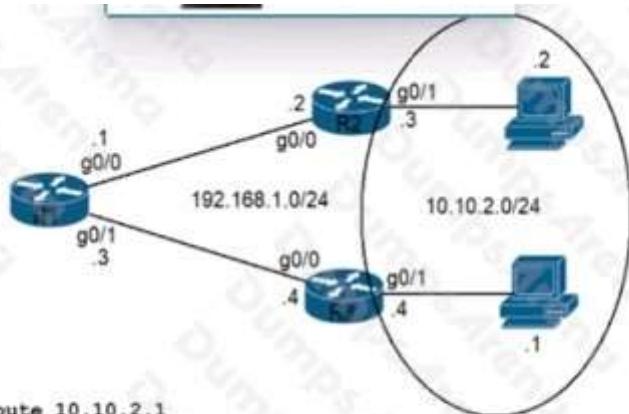

Explanation

Explanation/Reference:

QUESTION 312

Refer to the exhibit.

Traffic from R1 to the 10.10.2.0/24 subnet uses 192.168.1.2 as its next hop. A network engineer wants to update the R1 configuration so that traffic with destination 10.10.2.1 passes through router R3, and all other traffic to the 10.10.20/24 subnet passes through r2. Which command must be used?

```
R1#show ip route 10.10.2.1
Routing entry for 10.10.2.0/24
Known via "ospf 1", distance 110, metric 2, type intra area
Last update from 192.168.1.2 on GigabitEthernet0/0, 01:23:15 ago
Routing Descriptor Blocks:
* 192.168.1.2, from 192.168.1.2, 01:23:15 ago, via GigabitEthernet0/0
  Route metric is 2, traffic share count is 1
```

- A. Ip route 10.10.2.1 255.255.255.255 192.168.1.4 115
- B. Ip route 10.10.2.0 255.255.255.0 192.168.1.4 100
- C. Ip route 10.10.2.0 255.255.255.0 192.168.1.4 115
- D. Ip route 10.10.2.1 255.255.255.255 192.168.1.4 100

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 313

Refer the exhibit.

```
R19#sh int fa0/0
FastEthernet0/0 is up, line protocol is up
Hardware is DEC21140, address is ca02.7788.0000 (bia ca02.7788.0000)
Description: SALES_SUBNET
Internet address is 10.32.102.2/30
MTU 1500 bytes, BW 100000 Kbit/sec, DLY 100 usec,
reliability 255/255, txload 1/255, rxload 1/255
Encapsulation ARPA, loopback not set
Keepalive set (60 sec)
Full-duplex, 100Mb/s, 100BaseTX/FX
ARP type: ARPA, ARP Timeout 04:00:00
Last input 00:00:01, output 00:00:00, output hang never
Last clearing of "show interface" counters never
Input queue: 0/300/0/0 (size/max/drops/flushes); Total output drops:
135298429
Queueing strategy: fifo
Output queue: 0/300 (size/max)
30 second input rate 0 bits/sec, 0 packets/sec
30 second output rate 0 bits/sec, 0 packets/sec
73310 packets input, 7101162 bytes
Received 73115 broadcasts (0 IP multicasts)
0 runts, 0 giants, 0 throttles
0 input errors, 4 CRC, 0 frame, 0 overrun, 0 ignored
0 watchdog
0 input packets with dribble condition detected
3927513096455 packets output, 14404034810952 bytes, 0 underruns
0 output errors, 11 collisions, 0 interface resets
```

What is the cause of poor performance on router R19?

- A. excessive collisions
- B. speed and duplex mismatch
- C. port oversubscription
- D. excessive CRC errors

QUESTION 316

Why is TCP desired over UDP for application that require extensive error checking, such as HTTPS?

- A. UDP operates without acknowledgments, and TCP sends an acknowledgment for every packet received.
- B. UDP reliably guarantees delivery of all packets, and TCP drops packets under heavy load.
- C. UDP uses flow control mechanisms for the delivery of packets, and TCP uses congestion control for efficient packet delivery.
- D. UDP uses sequencing data for packets to arrive in order, and TCP offers the capability to receive packets in random order.

Correct Answer: A

QUESTION 341

What is the primary purpose of private address space?

- A. conserve globally unique address space
- B. simplify the addressing in the network
- C. limit the number of nodes reachable via the Internet
- D. reduce network complexity

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 342

Refer to the exhibit.

The P2P blocking action option is disabled on the WLC.

- A. Enable the Static IP Tunneling option.
- B. Disable the Coverage Hole Detection option.
- C. Check the DHCP Addr. Assignment check box.
- D. Set the P2P Blocking Action option to Forward-UpStream.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 343

What is a reason to configure a trunk port that connects to a WLC distribution port?

- A. Eliminate redundancy with a link failure in the data path.
- B. Allow multiple VLAN to be used in the data path.
- C. Provide redundancy if there is a link failure for out-of-band management.
- D. Permit multiple VLANs to provide out-of-band management.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 344

What is a purpose of traffic shaping?

- A. It enables dynamic flow identification.

- B. It enables policy-based routing.
- C. It provides best-effort service.
- D. It limits bandwidth usage.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 345

What is a characteristic of a collapsed-core network topology?

- A. It allows the core and distribution layers to run as a single combined layer.
- B. It enables the core and access layers to connect to one logical distribution device over an EtherChannel.
- C. It enables all workstations in a SOHO environment to connect on a single switch with internet access.
- D. It allows wireless devices to connect directly to the core layer, which enables faster data transmission.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 346

To improve corporate security, an organization is planning to implement badge authentication to limit access to the data center. Which element of a security program is being deployed?

- A. user training
- B. user awareness
- C. vulnerability verification
- D. physical access control

Correct Answer: D

Section: (none)

Explanation/Reference:

QUESTION 348

When a WPA2-PSK WLAN is configured in the Wireless LAN Controller, what is the minimum number of characters that is required in ASCII format?

- A. 6
- B. 8

- C. 12
- D. 18

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 349

Refer to the exhibit.

```
R1# show ip route
...
D      172.16.32.0/27 [90/2888597172]  via 20.1.1.1
O      172.16.32.0/19  [110/292094]    via 20.1.1.10
R      172.16.32.0/24  [120/2]        via 20.1.1.3
```

An engineer executed the script and added commands that were not necessary for SSH and now must remove the commands.

- A. metric
- B. cost
- C. longest prefix
- D. administrative distance

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 350

Which cipher is supported for wireless encryption only with the WPA2 standard?

- A. AES256
- B. AES
- C. RC4
- D. SHA

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 351

What is a specification for SSIDS?

- A. They are a Cisco proprietary security feature.

- B. They must include one number and one letter.
- C. They define the VLAN on a switch.
- D. They are case sensitive.

Correct Answer: B

Section: (none)

QUESTION 352

- (DRAG DROP)

An engineer must configure a core router with a floating static default route to the backup router at 10.200.0.2.

Answer:

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 353

Refer to the exhibit.

How does router R1 handle traffic to the 172.16.1.4/30 subnet?

- A. It sends all traffic over the path via 172.16.9.5 using 172.16.4.4 as a backup.
- B. It sends all traffic over the path via 10.0.1.100.
- C. It load-balances traffic over 172.16.9.5 and 172.16.4.4.
- D. It sends all traffic over the path via 172.16.4.4.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 354

Which type of address is shared by routers in a HSRP implementation and used by hosts on the subnet as their default gateway address?

- A. multicast address
- B. loopback IP address
- C. virtual IP address
- D. broadcast address

Correct Answer: C

Section: (none)

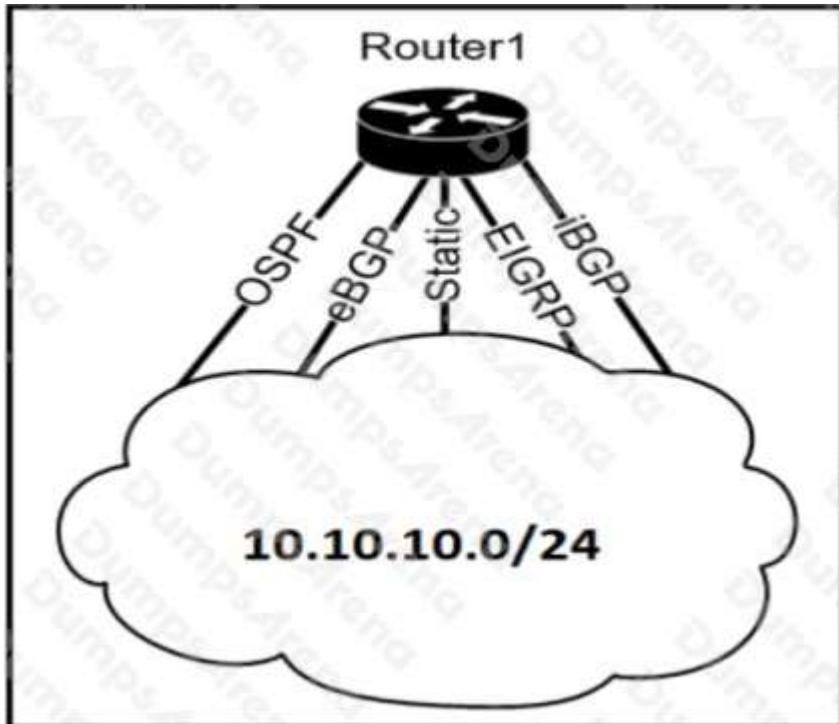

Explanation

Explanation/Reference:

QUESTION 355

- (DRAG DROP)

Refer to the exhibit.

The Router1 routing table has multiple methods to reach 10.10.10.0/24 as shown. The default Administrative Distance is used. Drag and drop the network conditions from the left onto the routing methods that Router1 uses on the right.

Answer:

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 356

Which device segregates a network into separate zones that have their own security policies?

- A. IPS
- B. firewall
- C. access point

D. switch

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 357

Refer to the exhibit.

```
Gateway of last resort is 172.16.2.2 to network 0.0.0.0

  10.0.0.0/8 is variably subnetted, 3 subnets, 3 masks
    10.10.100.0/26 is directly connected, GigabitEthernet0/0/6
  C    10.10.10.0/24 is directly connected, GigabitEthernet0/0/0
  L    10.10.10.3/32 is directly connected, GigabitEthernet0/0/0
    172.16.0.0/16 is variably subnetted, 3 subnets, 2 masks
  S    172.16.1.33/32 is directly connected, GigabitEthernet0/0/1
  C    172.16.2.0/23 is directly connected, GigabitEthernet0/0/1
  L    172.16.2.1/32 is directly connected, GigabitEthernet0/0/1
S*   0.0.0.0/0 [1/0] via 172.16.2.2
```

A packet sourced from 10.10.10.32 is destined for the internet.

- A. 0
- B. 1
- C. 2
- D. 32

Correct Answer: B

Explanation

Explanation/Reference:

QUESTION 364

Which advantage does the network assurance capability of Cisco DNA Center provide over traditional campus management?

- A. Cisco DNA Center correlates information from different management protocols to obtain insights, and traditional campus management requires manual analysis.
- B. Cisco DNA Center handles management tasks at the controller to reduce the load on infrastructure devices, and traditional campus management uses the data backbone.
- C. Cisco DNA Center leverages YANG and NETCONF to assess the status of fabric and nonfabric devices, and traditional campus management uses CLI exclusively.
- D. Cisco DNA Center automatically compares security postures among network devices, and traditional campus management needs manual comparisons.

Correct Answer: C

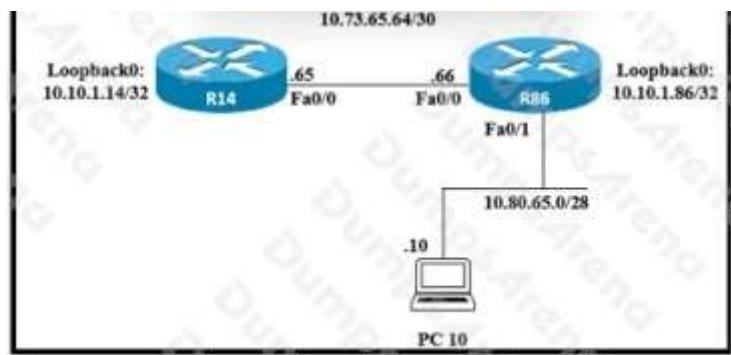

Section: (none)

Explanation

Explanation/Reference:

QUESTION 365

Refer to the exhibit.

Router R14 is in the process of being configured. Which configuration must be used to establish a host route to PC 10?

- A. ip route 10.80.65.10 255.255.255.254 10.80.65.1
- B. ip route 10.80.65.10 255.255.255.255 10.73.65.66

- C. ip route 1073.65.65 255.0.0.0 10.80.65.10
- D. ip route 10.73.65.66 0.0.0.255 10.80.65.10

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 366

What is the put method within HTTP?

- A. It is a read-only operation.
- B. It is a nondempotent operation.
- C. It replaces data at the destination.
- D. It displays a web site.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 367

How do TCP and UDP fit into a query-response model?

- A. TCP establishes a connection prior to sending data, and UDP sends immediately.
- B. TCP uses error detection for packets, and UDP uses error recovery.
- C. TCP avoids using sequencing, and UDP avoids using acknowledgments.
- D. TCP encourages out-of-order packet delivery, and UDP prevents re-ordering.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 368

What does the implementation of a first-hop redundancy protocol protect against on a network?

- A. root-bridge loss
- B. spanning-tree loops
- C. default gateway failure
- D. BGP neighbor flapping

Correct Answer: C

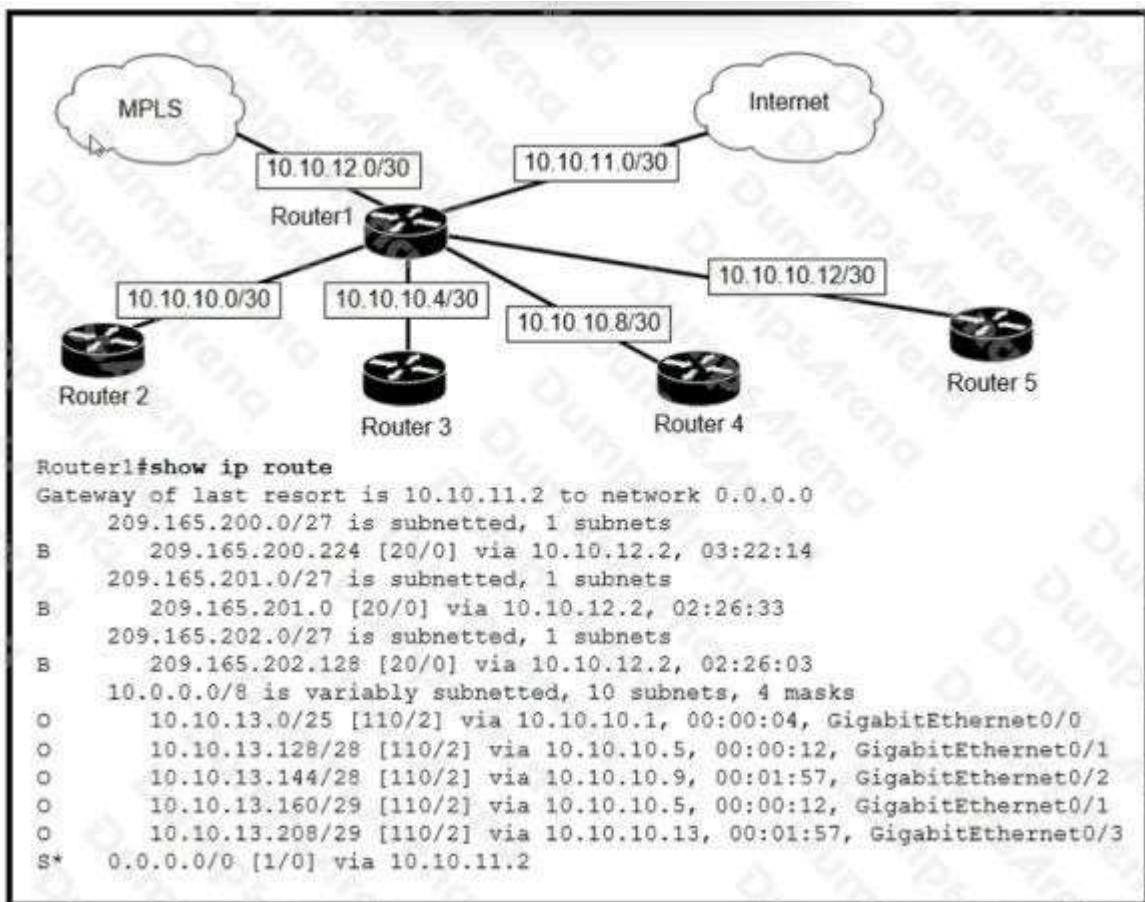

Section: (none)

Explanation

Explanation/Reference:

QUESTION 369
- (DRAG DROP)

Refer to the exhibit.

Drag and drop the destination IPs from the left onto the paths to reach those destinations on the right.

Answer:

A.

1.1.1.1	10.10.13.126
10.10.13.126	10.10.13.129
10.10.13.129	10.10.13.150
10.10.13.150	10.10.13.209
10.10.13.209	209.165.200.30
209.165.200.30	1.1.1.1

Correct Answer: A

Section: (none)

Explanation/Reference:

QUESTION 370

Which benefit does Cisco ONA Center provide over traditional campus management?

- A. Cisco DNA Center leverages SNMPv3 for encrypted management, and traditional campus management uses SNMPv2.
- B. Cisco DNA Center automates HTTPS for secure web access, and traditional campus management uses HTTP.
- C. Cisco DNA Center leverages APIs, and traditional campus management requires manual data gathering.
- D. Cisco DNA Center automates SSH access for encrypted entry, and SSH is absent from traditional campus management.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 371

Refer to the exhibit.

```
Last clearing of "show interface" counters never
Input queue: 1/75/1/0 (size/max/drops/flushes); Total output drops: 0
Queueing strategy: random early detection(RED)
Output queue :0/40 (size/max)
5 minute input rate 1000 bits/sec, 2 packets/sec
5 minute output rate 0 bits/sec, 0 packets/sec
 7558065 packets input, 783768942 bytes, 1 no buffer
  Received 8280963 broadcasts, 0 runts, 0 giants, 1 throttles
  15 input errors, 14278 CRC, 0 frame, 0 overrun, 3 ignored
  0 input packets with dribble condition detected
  798092 packets output, 50280266 bytes, 0 underruns
  0 output errors, 15000 collisions, 0 interface resets
  0 babbles, 0 late collision, 179 deferred
  0 lost carrier, 0 no carrier
  0 output buffer failures, 0 output buffers swapped out
```

An administrator received a call from a branch office regarding poor application performance hosted at the headquarters. Ethernet 1 is connected between Router1 and the LAN switch. What identifies the issue?

- A. The QoS policy is dropping traffic.
- B. There is a duplex mismatch.
- C. The link is over utilized.
- D. The MTU is not set to the default value.

Correct Answer: C

Explanation/Reference:

QUESTION 377

PC1 tries to send traffic to newly installed PC2. The PC2 MAC address is not listed in the MAC address table of the switch, so the switch sends the packet to all ports in the same VLAN. Which switching concept does this describe?

- A. MAC address aging
- B. MAC address table
- C. frame flooding
- D. spanning-tree protocol

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 378

A network engineer is upgrading a small data center to host several new applications, including server backups that are expected to account for up to 90% of the bandwidth during peak times. The data center connects to the MPLS network provider via a primary circuit and a secondary circuit. How does the engineer inexpensively update the data center to avoid saturation of the primary circuit by traffic associated with the backups?

- A. Assign traffic from the backup servers to a dedicated switch.

- B. Configure a dedicated circuit for the backup traffic.
- C. Place the backup servers in a dedicated VLAN.
- D. Advertise a more specific route for the backup traffic via the secondary circuit.

Correct Answer: A

Section: (none)

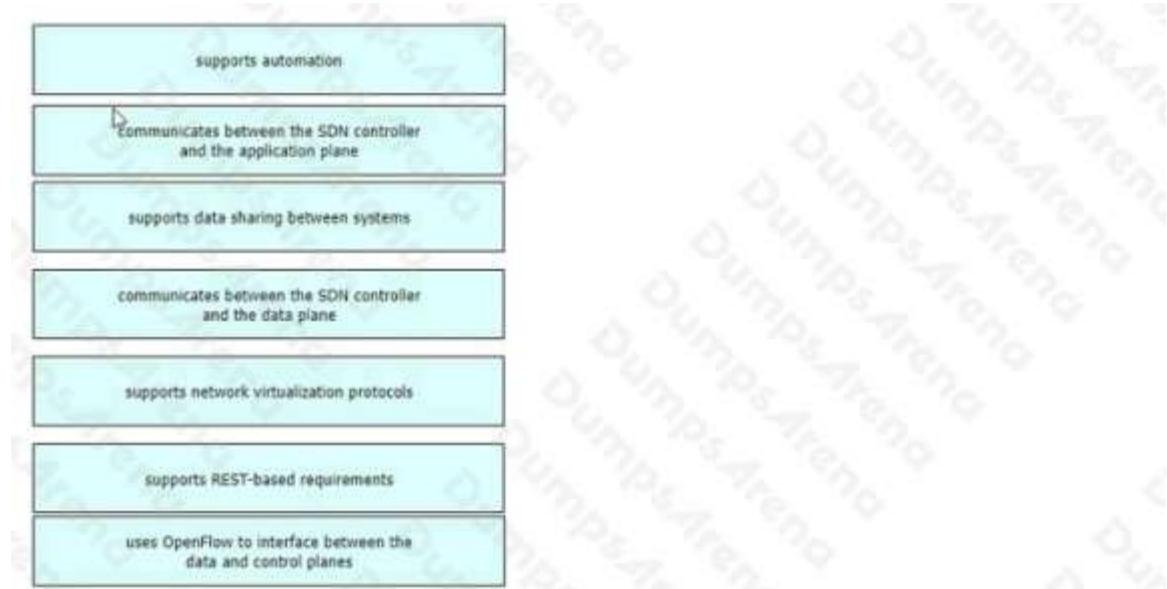

Explanation

Explanation/Reference:

QUESTION 379

- (DRAG DROP)

Drag and drop the characteristics of northbound APIs from the left onto any position on the right. Not all characteristics are used.

Answer:

A.

supports automation	supports data sharing between systems
Communicates between the SDN controller and the application plane	communicates between the SDN controller and the data plane
supports data sharing between systems	supports network virtualization protocols
communicates between the SDN controller and the data plane	supports REST-based requirements
supports network virtualization protocols	
supports REST-based requirements	
uses OpenFlow to interface between the data and control planes	

Correct Answer: A

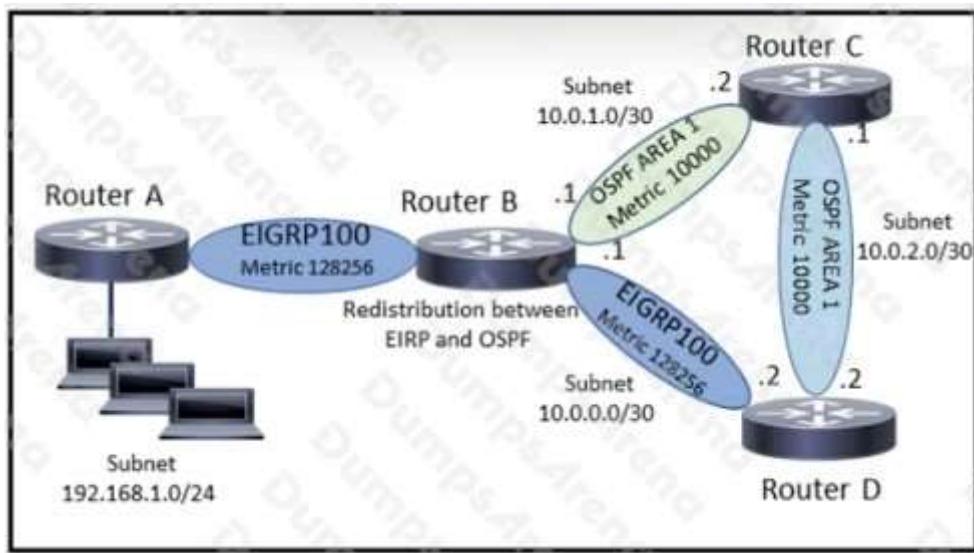

Section: (none)

Explanation

Explanation/Reference:

QUESTION 380

Refer to the exhibit.

A network engineer executes the `show ip route` command on router D. What is the next hop to network 192.168.1.0/24 and why?

- A. The next hop is 10.0.2.1 because it uses distance vector routing

- B. The next hop is 10.0.2.1 because it is a link-state routing protocol
- C. The next hop is 10.0.0.1 because it has a better administrative distance
- D. The next hop is 10.0.0.1 because it has a higher metric.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 382

What is the role of nonoverlapping channels in a wireless environment?

- A. to reduce interference
- B. to allow for channel bonding
- C. to stabilize the RF environment
- D. to increase bandwidth

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 383

A router has two static routes to the same destination network under the same OSPF process. How does the router forward packets to the destination if the next-hop devices are different?

- A. The router chooses the route with the oldest age.
- B. The router load-balances traffic over all routes to the destination.
- C. The router chooses the next hop with the lowest MAC address.
- D. The router chooses the next hop with the lowest IP address.

Correct Answer: B

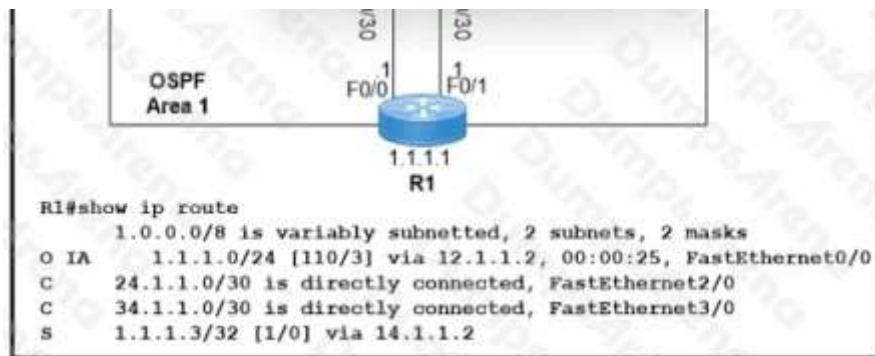

Section: (none)

Explanation

Explanation/Reference:

QUESTION 384

Refer to the exhibit.

Which two values does router R1 use to determine the best path to reach destinations in network 1.0.0.0/8? (Choose two.)

- A. longest prefix match
- B. highest administrative distance
- C. highest metric
- D. lowest metric
- E. lowest cost to reach the next hop

Correct Answer: AD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 385

Refer to the exhibit.

Host A switch interface is configured in VLAN 2. Host D sends a unicast packet destined for the IP address of host A.

```
Sw1#show mac-address table
Mac Address Table
-----
Vlan  Mac Address      Type      Ports
----  -----
2    000c.859c.bb7b  DYNAMIC  e0/1
3    000c.859c.bb7b  DYNAMIC  e0/1
2    0010.11dc.3e91  DYNAMIC  e0/2
3    0010.11dc.3e91  DYNAMIC  e0/2
2    0043.49d4.c383  DYNAMIC  e0/3
Sw1#
```

What does the switch do when it receives the frame from host D?

- A. It creates a broadcast storm.
- B. It drops the frame from the MAC table of the switch.
- C. It shuts down the source port and places it in err-disable mode.
- D. It floods the frame out of every port except the source port.

Correct Answer: C

QUESTION 386

Which properly is shared by 10GBase-SR and 10GBase-LR interfaces?

- A. Both require fiber cable media for transmission.
- B. Both require UTP cable media for transmission.
- C. Both use the single-mode fiber type.
- D. Both use the multimode fiber type.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 387

Refer to the exhibit.

```

R1
interface GigabitEthernet0/1
  ip address 192.168.12.1 255.255.255.128
  no shutdown
router ospf 1
  network 192.168.12.1 0.0.0.0 area 1

R2
interface GigabitEthernet0/1
  ip address 192.168.12.2 255.255.255.128
  no shutdown

```

A network engineer started to configure two directly-connected routers as shown. Which command sequence must the engineer configure on R2 so that the two routers become OSPF neighbors?

- A. `router ospf 1
 network 192.168.12.1 0.0.0.0 area 1`
- B. `interface GigabitEthernet0/1
 ip ospf 1 area 1`
- C. `interface GigabitEthernet0/1
 ip ospf 1 area 0`
- D. `router ospf 1
 network 192.168.12.0 0.0.0.127 area 0`

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 388

Refer to the exhibit.

```

MacOS$ ifconfig
en0: flags=8863<UP,BROADCAST,SMART,RUNNING,SIMPLEX,MULTICAST> mtu 1500
  options=400<CHANNEL_10>
  ether f0:18:98:64:60:32
  inet6 fe80::492:c09f:57cf:8c36%en0 prefixlen 64 secured scopeid 0x6
    inet 10.8.138.14 netmask 0xffffffff broadcast 10.8.139.255
    ndd options=201<PERFORMNUD,DAD>
    media: autoselect
    status: active

```

A network engineer must provide configured IP addressing details to investigate a firewall rule issue. Which subnet and mask identify what is configured on the en0 interface?

- A. 10.8.0.0/16
- B. 10.8.64.0/18
- C. 10.8.128.0/19
- D. 10.8.138.0/24

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 389

Refer to the exhibit.

```
R1# show ip route
Codes: C - connected, S - static, I - IGRP, R - RIP, M - mobile, B - BGP
      D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
      N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
      E1 - OSPF external type 1, E2 - OSPF external type 2, E - EGP
      i - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, * - candidate
      default
      U - per-user static route, o - ODR
Gateway of last resort is not set
C   10.0.0.0/8 is directly connected, Loopback0
    10.0.0.0/8 is variably subnetted, 4 subnets, 2 masks
O     10.0.1.3/32 [110/100] via 10.0.1.100, 00:39:08, Serial0
C     10.0.1.0/24 is directly connected, Serial0
O     10.0.1.5/32 [110/5] via 10.0.1.50, 00:39:08, Gigabit Ethernet 0/0
D     10.0.1.4/32 [110/10] via 10.0.1.4, 00:39:08, Gigabit Ethernet 0/0
```

What does route 10.0.1.3/32 represent in the routing table?

- A. the 10.0.0.0 network
- B. a single destination address
- C. the source 10.0.1.100
- D. all hosts in the 10.0.1.0 subnet

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 390

Refer to the exhibit.

```
access-list 10 permit 10.0.0.0 0.0.0.255
interface Serial0
  ip access-list 10 in
```

of the configuration as the administrator applies the command?

- A. The permit command fails and returns an error code.

- B. The router accepts all incoming traffic to Serial10 with the last octet of the source IP set to 0.
- C. The sourced traffic from IP range 10.0.0.0 -10.0.0.255 is allowed on Serial10.
- D. The router fails to apply the access list to the interface.

Correct Answer: C

Section: (none)

Explanation

QUESTION 393

What are two characteristics of a small office / home office connection environment? (Choose two.)

- A. It requires 10Gb ports on all uplinks.
- B. It supports between 50 and 100 users.
- C. It supports between 1 and 50 users.
- D. It requires a core, distribution, and access layer architecture.
- E. A router port connects to a broadband connection.

Correct Answer: CE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 394

Which syslog severity level is considered the most severe and results in the system being considered unusable?

- A. Alert
 - B. Error
 - C. Emergency
 - D. Critical

Correct Answer: C

Explanation

Explanation/Reference:

QUESTION 395

QUESTION 65

- A. malicious code that is installed onto a computer to allow access by an unauthorized user
 - B. malicious code with the main purpose of downloading other malicious code
 - C. malicious program that is used to launch other malicious programs
 - D. malicious code that infects a user machine and then uses that machine to send spam

Correct Answer: A

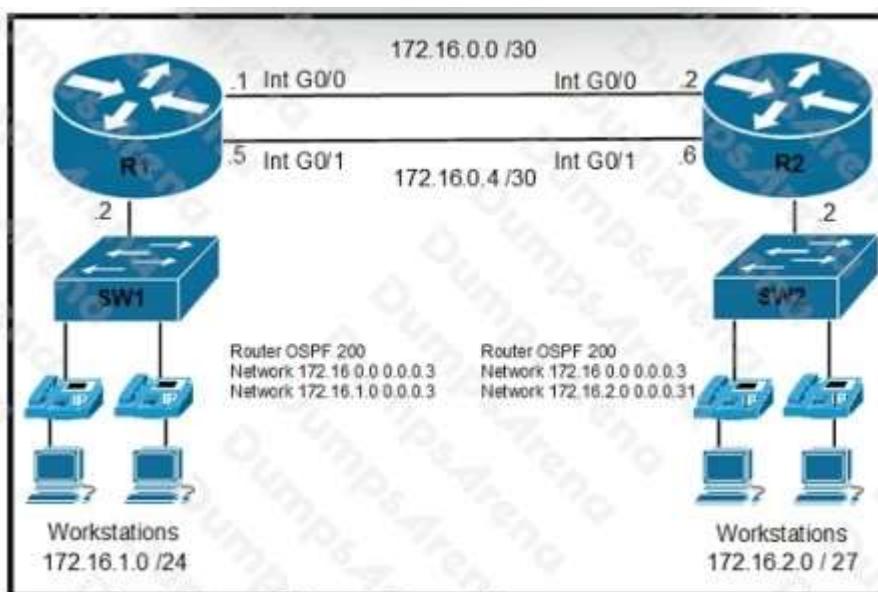

Section: (none)

Explanation

Explanation/Reference:

QUESTION 396

QUESTION 30

The primary route across Gi0/0 is configured on both routers. A secondary route must be configured to establish connectivity between the workstation networks. Which command set must be configured to complete this task?

- A. R1
ip route 172.16.2.0 255.255.255.240 172.16.0.2 113
R2
ip route 172.16.1.0 255.255.255.0 172.16.0.1 114
- B. R1
ip route 172.16.2.0 255.255.255.240 172.16.0.5 89
R2
ip route 172.16.1.0 255.255.255.0 172.16.0.6 89
- C. R1
ip route 172.16.2.0 255.255.255.248 172.16.0.5 110
R2
ip route 172.16.1.0 255.255.255.0 172.16.0.6 110
- D. R1
ip route 172.16.2.0 255.255.255.224 172.16.0.6 111
R2
ip route 172.16.1.0 255.255.255.0 172.16.0.5 112

Correct Answer: D

QUESTION 397

- (SIMULATION)

Guidelines

This is a lab item in which tasks will be performed on virtual devices.

- Refer to the **Tasks** tab to view the tasks for this lab item.
- Refer to the **Topology** tab to access the device console(s) and perform the tasks.
- Console access is available for all required devices by clicking the device icon or using the tab(s) above the console window.
- All necessary preconfigurations have been applied.
- Do not change the enable password or hostname for any device.
- **Save your configurations** to NVRAM before moving to the next item.
- Click **Next** at the bottom of the screen to submit this lab and move to the next question.
- When **Next** is clicked, the lab closes and cannot be reopened.

IP connectivity between the three routers is configured. OSPF adjacencies must be established.

1. Configure R1 and R2 Router IDs using the interface IP addresses from the link that is shared between them.
2. Configure the R2 links with a max value facing R1 and R3. R2 must become the DR. R1 and R3 links facing R2 must remain with the default OSPF configuration for DR election. Verify the configuration after clearing the OSPF process.
3. Using a host wildcard mask, configure all three routers to advertise their respective Loopback1 networks.
4. Configure the link between R1 and R3 to disable their ability to add other OSPF routers.

A. ANSWER: See the below.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Answer as below configuration:

```

QUESTION 398
- (SIMULATION)

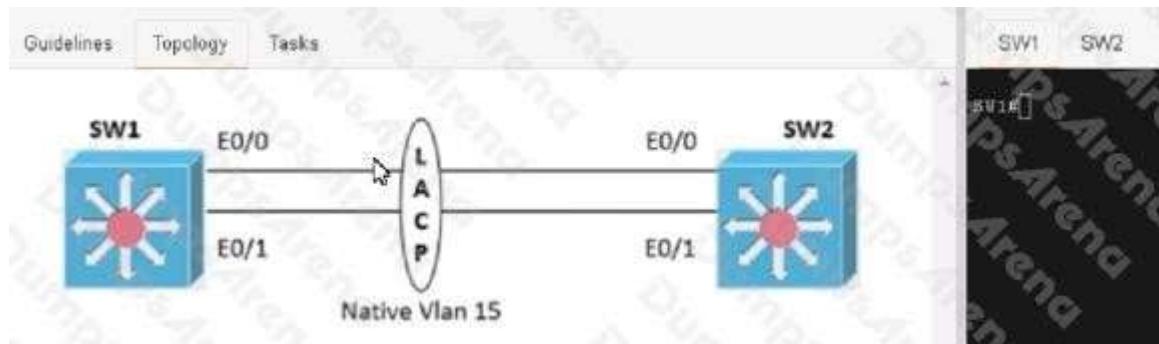

Physical connectivity is implemented between the two Layer 2 switches, and the network connectivity between them must be configured

1. Configure an LACP EtherChannel and number it as 1; configure it between switches SW1 and SVV2 using interfaces Ethernet0/0 and Ethernet0/1 on both sides. The LACP mode must match on both ends
2. Configure the EtherChannel as a trunk link.
3. Configure the trunk link with 802.1 q tags.
4. Configure the native VLAN of the EtherChannel as VLAN 15.

Guidelines

This is a lab item in which tasks will be performed on virtual devices.

- Refer to the **Tasks** tab to view the tasks for this lab item.
- Refer to the **Topology** tab to access the device console(s) and perform the tasks.
- Console access is available for all required devices by clicking the device icon or using the tab(s) above the console window.
- All necessary preconfigurations have been applied.
- Do not change the enable password or hostname for any device.
- **Save your configurations to NVRAM** before moving to the next item.
- Click **Next** at the bottom of the screen to submit this lab and move to the next question.
- When **Next** is clicked, the lab closes and cannot be reopened.

A. ANSWER: See the below.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Answer as below configuration:

On SW1:

```
conf terminal
```

```
vlan 15
```

```
exit
```

```
interface range eth0/0 - 1
```

```
channel-group 1 mode active
```

```
exit
```

```
interface port-channel 1
```

```
switchport trunk encapsulation dot1q
```

```
switchport mode trunk
```

```
switchport trunk native vlan 15
```

```
end
```

```
copy run start
```

```
on SW2:
```

```
conf terminal
```

```
vlan 15
```

```
exit
```

```
interface range eth0/0 - 1
```

```
channel-group 1 mode active
```

```
exit
```

```
interface port-channel 1
```

```
switchport trunk encapsulation dot1q
```

```
switchport mode trunk
```

```
switchport trunk native vlan 15
```

```
end
```

```
copy run start
```

QUESTION 399

- (SIMULATION)

Configure IPv4 and IPv6 connectivity between two routers. For IPv4, use a /28 network from the 192.168.1.0/24 private range. For IPv6, use the first /64 subnet from the 2001:0db8:aaaa::/48 subnet.

1. Using Ethernet0/1 on routers R1 and R2, configure the next usable/28 from the 192.168.1.0/24 range. The network 192.168.1.0/28 is unavailable.
2. For the IPv4 /28 subnet, router R1 must be configured with the first usable host address.
3. For the IPv4 /28 subnet, router R2 must be configured with the last usable host address.
4. For the IPv6 /64 subnet, configure the routers with the IP addressing provided from the topology.
5. A ping must work between the routers on the IPv4 and IPv6 address ranges.

Guidelines Topology Tasks

Guidelines

This is a lab item in which tasks will be performed on virtual devices.

- Refer to the **Tasks** tab to view the tasks for this lab item.
- Refer to the **Topology** tab to access the device console(s) and perform the tasks.
- Console access is available for all required devices by clicking the device icon or using the tab(s) above the console window.
- All necessary preconfigurations have been applied.
- Do not change the enable password or hostname for any device.
- Save your configurations to NVRAM before moving to the next item.
- Click **Next** at the bottom of the screen to submit this lab and move to the next question.
- When **Next** is clicked, the tab closes and cannot be reopened.

A. ANSWER: See the below.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Answer as below configuration:

on R1

config terminal

ipv6 unicast-routing

inter eth0/1

ip addre 192.168.1.1 255.255.255.240

ipv6 addre 2001:db8:aaaa::1/64

not shut

end

copy running start

on R2

```

config terminal
ipv6 unicast-routing
inter eth0/1
ip address 192.168.1.14 255.255.255.240
ipv6 address 2001:db8:aaaa::2/64
not shut
end
copy running start
-----

```

for test from R1

ping ipv6 2001:db8:aaaa::1

for test from R2

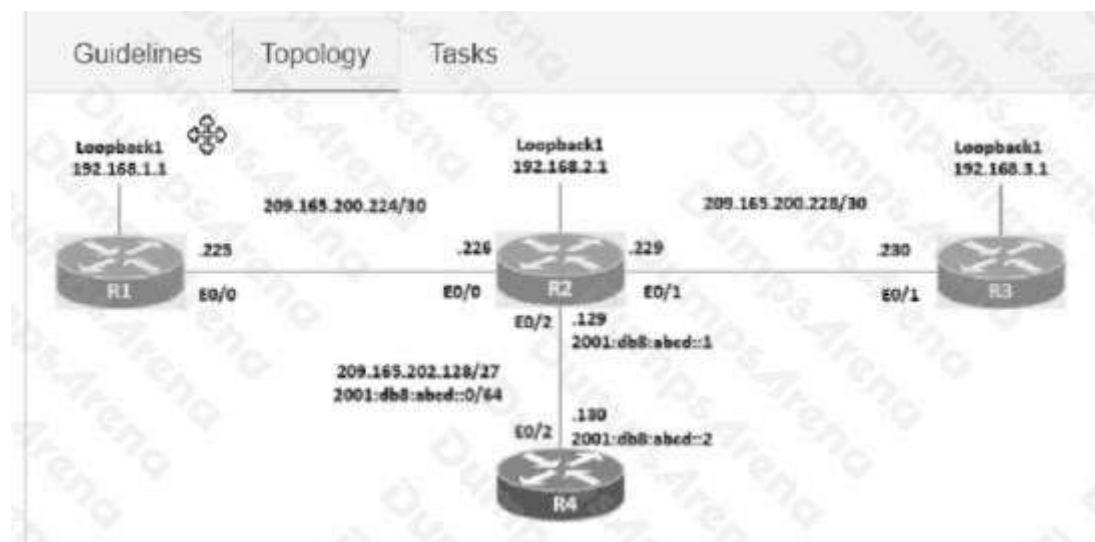

ping ipv6 2001:db8:aaaa::2

QUESTION 400

- (SIMULATION)

Connectivity between four routers has been established. IP connectivity must be configured in the order presented to complete the implementation. No dynamic routing protocols are included.

1. Configure static routing using host routes to establish connectivity from router R3 to the router R1 Loopback address using the source IP of 209.165.200.230.
2. Configure an IPv4 default route on router R2 destined for router R4.
3. Configure an IPv6 default router on router R2 destined for router R4.

Guidelines

This is a lab item in which tasks will be performed on virtual devices.

- Refer to the **Tasks** tab to view the tasks for this lab item.
- Refer to the **Topology** tab to access the device console(s) and perform the tasks.
- Console access is available for all required devices by clicking the device icon or using the tab(s) above the console window.
- All necessary preconfigurations have been applied.
- Do not change the enable password or hostname for any device.
- **Save your configurations** to NVRAM before moving to the next item.
- Click **Next** at the bottom of the screen to submit this lab and move to the next question.
- When **Next** is clicked, the lab closes and cannot be reopened.

A. ANSWER: See the below.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Answer as below configuration:

1.- on R3

config terminal

ip route 192.168.1.1 255.255.255.255 209.165.200.229

end

copy running start

2.- on R2

config terminal

ip route 0.0.0.0 0.0.0.0 209.165.202.130

end

copy running start

3.- on R2

config terminal

ipv6 route ::/0 2001:db8:abcd::2

end

copy running start

QUESTION 401

- (SIMULATION)

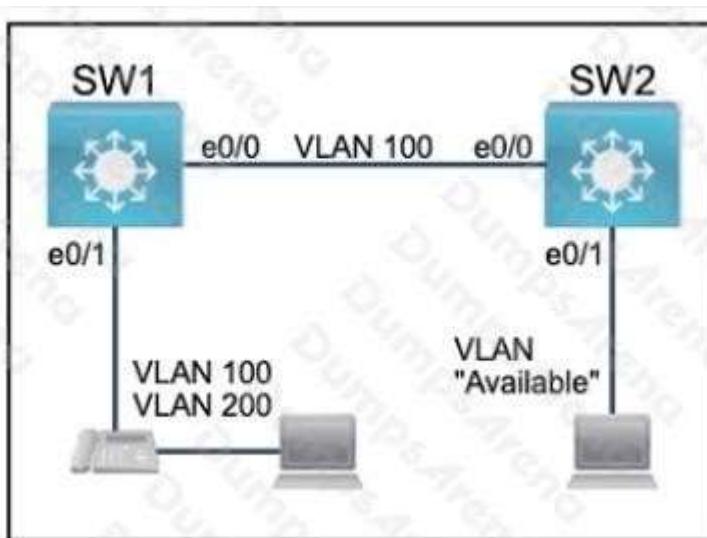

Guidelines

This is a lab item in which tasks will be performed on virtual devices.

- Refer to the **Tasks** tab to view the tasks for this lab item.
- Refer to the **Topology** tab to access the device console(s) and perform the tasks.
- Console access is available for all required devices by clicking the device icon or using the tab(s) above the console window.
- All necessary preconfigurations have been applied.
- Do not change the enable password or hostname for any device.
- **Save your configurations** to NVRAM before moving to the next item.
- Click **Next** at the bottom of the screen to submit this lab and move to the next question.
- When **Next** is clicked, the lab closes and cannot be reopened.

All physical cabling between the two switches is installed. Configure the network connectivity between the switches using the designated VLANs and interfaces.

1. Configure VLAN 100 named Compute and VLAN 200 named Telephony where required for each task.
2. Configure Ethernet0/1 on SW2 to use the existing VLAN named Available.
3. Configure the connection between the switches using access ports.
4. Configure Ethernet0/1 on SW1 using data and voice VLANs.
5. Configure Ethernet0/1 on SW2 so that the Cisco proprietary neighbor discovery protocol is turned off for the designated interface only.

A. ANSWER: See the below.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Answer as below configuration:

```
on sw1
enable
conf t
vlan 100
name Compute
vlan 200
name Telephony
int e0/1
switchport voice vlan 200
switchport access vlan 100
int e0/0
switchport mode access
do wr
on sw2
Vlan 99
Name Available
Int e0/1
Switchport access vlan 99
do wr
```

QUESTION 402

- (SIMULATION)

Guidelines

This is a lab item in which tasks will be performed on virtual devices.

- Refer to the **Tasks** tab to view the tasks for this lab item.
- Refer to the **Topology** tab to access the device console(s) and perform the tasks.
- Console access is available for all required devices by clicking the device icon or using the tab(s) above the console window.
- All necessary preconfigurations have been applied.
- Do not change the enable password or hostname for any device.
- **Save your configurations** to NVRAM before moving to the next item.
- Click **Next** at the bottom of the screen to submit this lab and move to the next question.
- When **Next** is clicked, the lab closes and cannot be reopened.

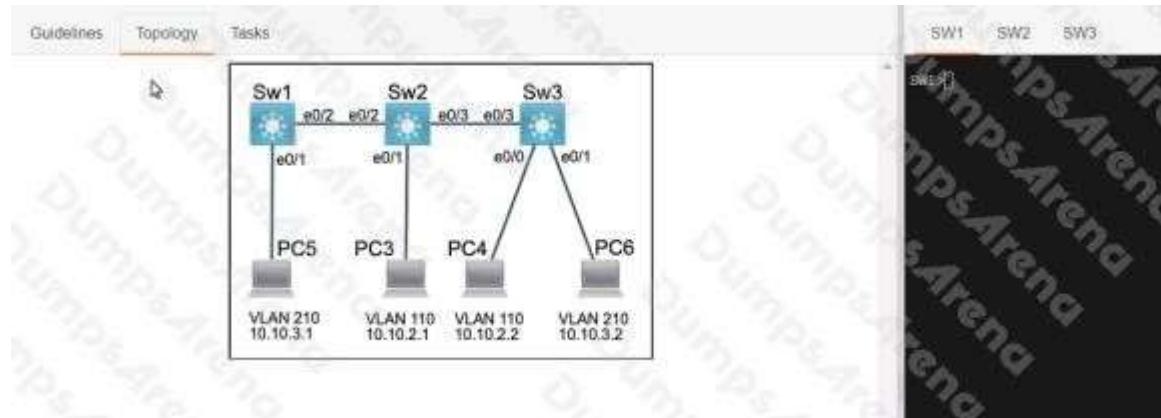

Three switches must be configured for Layer 2 connectivity. The company requires only the designated VLANs to be configured on their respective switches and permitted across any links between switches for security purposes. Do not modify or delete VTP configurations.

The network needs two user-defined VLANs configured:

VLAN 110: MARKETING

VLAN 210: FINANCE

1. Configure the VLANs on the designated switches and assign them as access ports to the interfaces connected to the PCs.
2. Configure the e0/2 interfaces on Sw1 and Sw2 as 802.1q trunks with only the required VLANs permitted.
3. Configure the e0/3 interfaces on Sw2 and Sw3 as 802.1q trunks with only the required VLANs permitted.

A. ANSWER: See the below.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Answer as below configuration:

Sw1
enbale
config t
Vlan 210
Name FINANCE
Inter e0/1
Switchport access vlan 210
do wr
Sw2
Enable
config t
Vlan 110
Name MARKITING
Int e0/1
Switchport aceses vlan 110
do wr
Sw3
Enable
config t
Vlan 110
Name MARKITING
Vlan 210
Name FINANCE
Int e0/0
Switchport access vlan 110
Int e0/1
Switchport access vlan 210
Sw1
Int e0/1
Switchport allowed vlan 210

Sw2

Int e0/2

Switchport trunk allowed vlan 210

Sw3

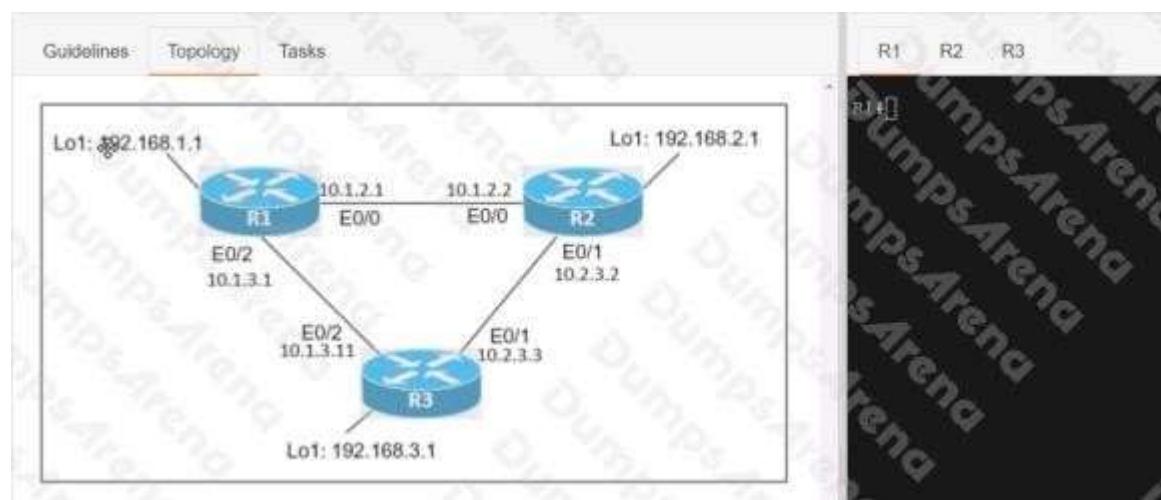

Int e0/3

Switchport trunk allowed vlan 210

Switchport trunk allowed vlan 210,110

QUESTION 403

- (SIMULATION)

Guidelines

This is a lab item in which tasks will be performed on virtual devices.

- Refer to the **Tasks** tab to view the tasks for this lab item.
- Refer to the **Topology** tab to access the device console(s) and perform the tasks.
- Console access is available for all required devices by clicking the device icon or using the tab(s) above the console window.
- All necessary preconfigurations have been applied.
- Do not change the enable password or hostname for any device.
- Save your configurations to NVRAM before moving to the next item.
- Click **Next** at the bottom of the screen to submit this lab and move to the next question.
- When **Next** is clicked, the lab closes and cannot be reopened.

Connectivity between three routers has been established, and IP services must be configured in the order presented to complete the implementation. Tasks assigned include configuration of NAT, NTP, DHCP, and SSH services.

1. All traffic sent from R3 to the R1 Loopback address must be configured for NAT on R2. All source addresses must be translated from R3 to the IP address of Ethernet0/0 on R2, while using only a standard access list named NAT To verify, a ping must be successful to the R1 Loopback address sourced from R3. Do not use NVI NAT configuration.

2. Configure R1 as an NTP server and R2 as a client, not as a peer, using the IP address of the R1 Ethernet0/2 interface.

Set the clock on the NTP server for midnight on January 1, 2019.

3. Configure R1 as a DHCP server for the network 10.1.3.0/24 in a pool named TEST. Using a single command, exclude addresses 1-10 from the range. Interface Ethernet0/2 on R3 must be issued the IP address of 10.1.3.11 via DHCP.

4. Configure SSH connectivity from R1 to R3, while excluding access via other remote connection protocols. Access for user root and password Cisco must be set on router R3 using RSA and 1024 bits. Verify connectivity using an SSH session from router R1 using a destination address of 10.1.3.11. Do NOT modify console access or line numbers to accomplish this task.

A. ANSWER: See the below.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Answer as below configuration:

conf t

R1(config)#ntp master 1

R2(config)#ntp server 10.1.2.1

Exit

Router#clock set 00:00:00 jan 1 2019

ip dhcp pool TEST

network 10.1.3.0 255.255.255.0

ip dhcp excluded-address 10.1.3.1 10.1.3.10

R3(config)#int e0/3

R3(config)#int e0/2

ip address dhcp

no shut

crypto key generate RSA

Copy run start

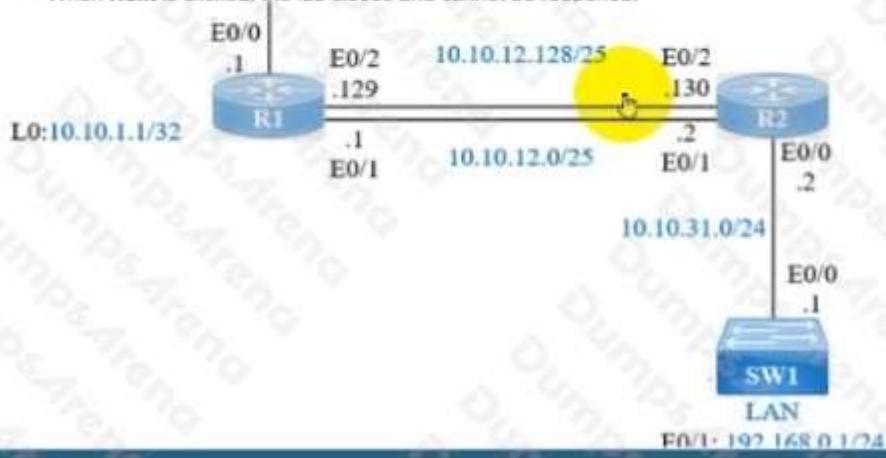

QUESTION 404

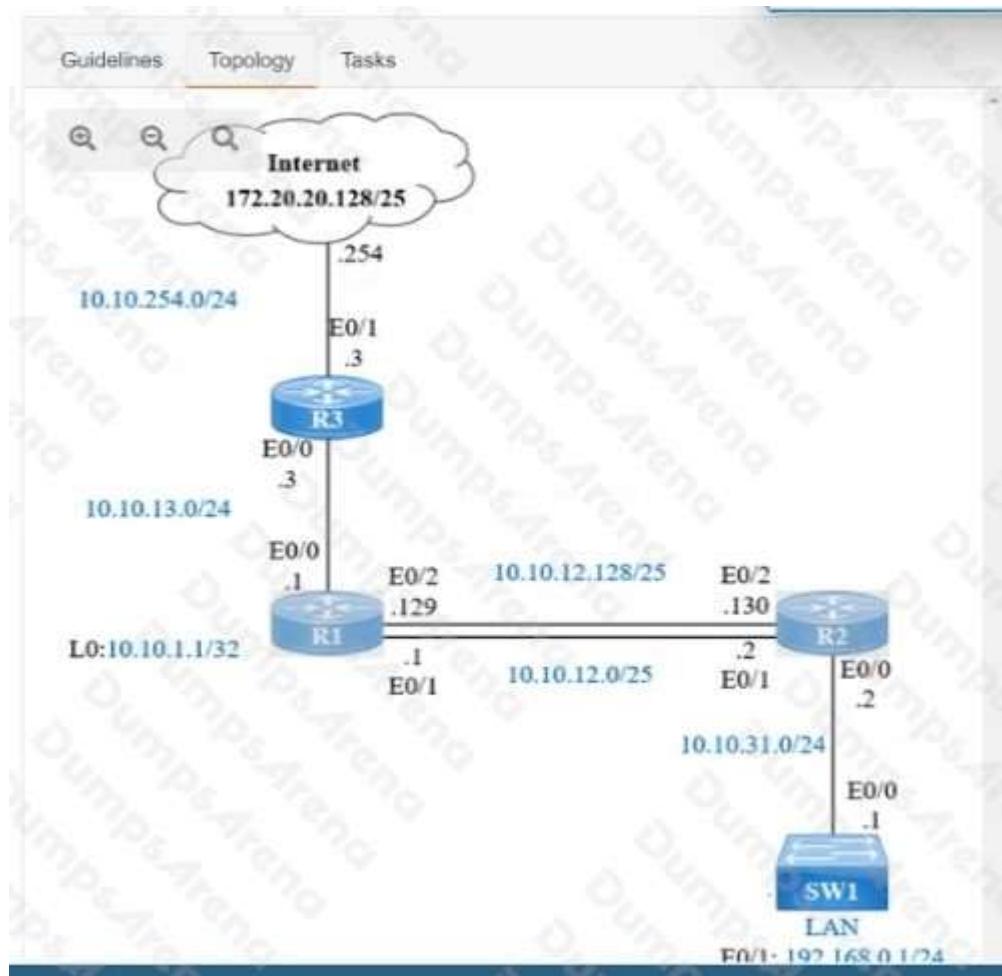

- (SIMULATION)

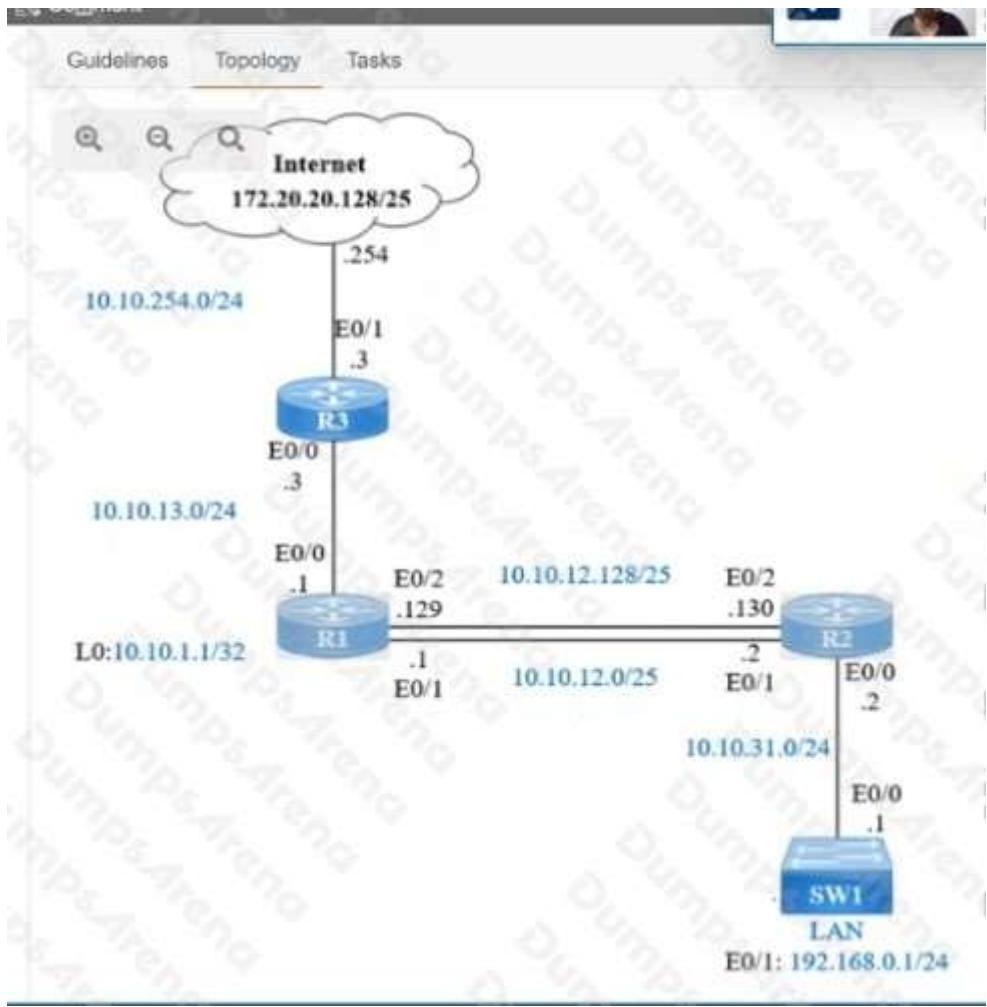

Guidelines

This is a lab item in which tasks will be performed on virtual devices.

- Refer to the **Tasks** tab to view the tasks for this lab item.
- Refer to the **Topology** tab to access the device console(s) and perform the tasks.
- Console access is available for all required devices by clicking the device icon or using the tab(s) above the console window.
- All necessary preconfigurations have been applied.
- Do not change the enable password or hostname for any device.

- Click **Next** at the bottom of the screen to submit this lab and move to the next question.
- When **Next** is clicked, the lab closes and cannot be reopened.

IP connectivity and OSPF are preconfigured on all devices where necessary. Do not make any changes to the IP addressing or OSPF. The company policy uses connected interfaces and next hops when configuring static routes except for load balancing or redundancy without floating static. Connectivity must be established between subnet 172.20.20.128/25 on the Internet and the LAN at 192.168.0.0/24 connected to SW1:

1. Configure reachability to the switch SW1 LAN subnet in router R2.
2. Configure default reachability to the Internet subnet in router R1.
3. Configure a single static route in router R2 to reach to the Internet subnet considering both redundant links between routers R1 and R2. A default route is NOT allowed in router R2.
4. Configure a static route in router R1 toward the switch SW1 LAN subnet where the primary link must be through Ethernet0/1. and the backup link must be through Ethernet0/2 using a floating route. Use the minimal administrative distance value when required.

A. ANSWER: See the below.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Answer as below configuration:

On R2:

Enable

Conf t

Ip route 192.168.1.0 255.255.255.0 10.10.31.1

On R1:

Enable

Conf t

Ip route 0.0.0.0 0.0.0.0 10.10.13.3

On R2

Ip route 172.20.20.128 255.255.255.128 e0/2

Ip route 172.20.20.128 255.255.255.128 e0/1

On R1

Ip route 192.168.0.0 255.255.255.0 e0/1

Ip route 192.168.0.0 255.255.255.0 10.10.12.2 3

Save all configurations after every router from anyone of these command

Do wr

Or

Copy run start

QUESTION 405

When a WPA2-PSK WLAN is configured in the wireless LAN Controller, what is the minimum number of characters that in ASCII format?

- A. 6
- B. 8
- C. 12
- D. 18

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 406

A network administrator must to configure SSH for remote access to router R1. The requirement is to use a public and private key pair to encrypt management traffic to and from the connecting client.

Which configuration, when applied, meets the requirements?

```
R1#enable
R1#configure terminal
R1(config)#ip domain-name cisco.com
R1(config)#crypto key generate ec keysize 2048
```

```
R1#enable
R1#configure terminal
R1(config)#ip domain-name cisco.com
R1(config)#crypto key generate rsa modulus 1024
```

```
R1#enable
R1#configure terminal
R1(config)#ip domain-name cisco.com
R1(config)#crypto key generate ec keysize 1024
```

```
R1#enable
R1#configure terminal
R1(config)#ip domain-name cisco.com
R1(config)#crypto key encrypt rsa name myKey
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 407

What is a function of TFTP in network operations?

- A. transfers a backup configuration file from a server to a switch using a username and password
- B. transfers files between file systems on a router
- C. transfers a configuration files from a server to a router on a congested link
- D. transfers IOS images from a server to a router for firmware upgrades

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

TFTP is mostly used (Firmware upgrade) whereby the admin have the IOS image on one device and uses TFTP to load the image to all other devices quickly.

QUESTION 408

Why does a switch flood a frame to all ports?

- A. The frame has zero destination MAC addresses.
- B. The source MAC address of the frame is unknown

- C. The source and destination MAC addresses of the frame are the same
- D. The destination MAC address of the frame is unknown.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 409

What are two benefits of network automation? (Choose two)

- A. reduced operational costs
- B. reduced hardware footprint
- C. faster changes with more reliable results
- D. fewer network failures
- E. increased network security

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 410

What are two recommendations for protecting network ports from being exploited when located in an office space outside of an IT closet? (Choose two.)

- A. enable the PortFast feature on ports
- B. implement port-based authentication
- C. configure static ARP entries
- D. configure ports to a fixed speed
- E. shut down unused ports

Correct Answer: BE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 411

Which protocol does an access point use to draw power from a connected switch?

- A. Internet Group Management Protocol
- B. Adaptive Wireless Path Protocol
- C. Cisco Discovery Protocol
- D. Neighbor Discovery Protocol

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 412

Refer to the exhibit.

```
R1# show ip route

D 192.168.16.0/26 [90/2679326] via 192.168.1.1
R 192.168.16.0/24 [120/3] via 192.168.1.2
O 192.168.16.0/21 [110/2] via 192.168.1.3
i Li 192.168.16.0/27 [115/30] via 192.168.1.4
```

Which route does R1 select for traffic that is destined to 192.168.16.2?

- A. 192.168.16.0/21
- B. 192.168.16.0/24
- C. 192.168.26.0/26
- D. 192.168.16.0/27

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

The destination IP addresses match all four entries in the routing table but the 192.168.16.0/27 has the longest prefix so it will be chosen. This is called the "longest prefix match" rule.

QUESTION 413

What is the purpose of an SSID?

- A. It provides network security
- B. It differentiates traffic entering access points
- C. It identifies an individual access point on a WLAN
- D. It identifies a WLAN

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

"In IEEE 802.11 wireless local area networking standards (including Wi-Fi), a service set is a group of wireless network devices which share a service set identifier (SSID)... A service set forms a logical network of nodes operating with shared link-layer networking parameters; they form one logical network segment."

QUESTION 414

An engineer must configure an OSPF neighbor relationship between router R1 and R3. The authentication configuration has been configured and the connecting interfaces are in the same 192.168.1.0/30 subnet. What are the next two steps to complete the configuration? (Choose two.)

- A. configure the hello and dead timers to match on both sides
- B. configure the same process ID for the router OSPF process

- C. configure the same router ID on both routing processes
- D. Configure the interfaces as OSPF active on both sides.
- E. configure both interfaces with the same area ID

Correct Answer: AE

Section: (none)

Explanation

QUESTION 415

Which action does the router take as it forwards a packet through the network?

- A. The router replaces the source and destination labels with the sending router interface label as a source and the next hop router label as a destination
- B. The router encapsulates the source and destination IP addresses with the sending router IP address as the source and the neighbor IP address as the destination
- C. The router replaces the original source and destination MAC addresses with the sending router MAC address as the source and neighbor MAC address as the destination
- D. The router encapsulates the original packet and then includes a tag that identifies the source router MAC address and transmit transparently to the destination

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 416

An engineer must configure traffic for a VLAN that is untagged by the switch as it crosses a trunk link. Which command should be used?

- A. switchport trunk allowed vlan 10
- B. switchport trunk native vlan 10
- C. switchport mode trunk
- D. switchport trunk encapsulation dot1q

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 417

Which IPv6 address type provides communication between subnets and is unable to route on the Internet?

- A. global unicast
- B. unique local
- C. link-local
- D. multicast

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 418

Which condition must be met before an NMS handles an SNMP trap from an agent?

- A. The NMS software must be loaded with the MIB associated with the trap.
- B. The NMS must be configured on the same router as the SNMP agent
- C. The NMS must receive a trap and an inform message from the SNMP agent within a configured interval
- D. The NMS must receive the same trap from two different SNMP agents to verify that it is reliable.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 419

Refer to the exhibit.

R1#show ip interface brief					
Interface	IP-Address	OK?	Method	Status	Protocol
FastEthernet0/0	unassigned	YES	NVRAM	administratively down	down
GigabitEthernet1/0	192.168.0.1	YES	NVRAM	up	up
GigabitEthernet2/0	10.10.1.10	YES	manual	up	up
GigabitEthernet3/0	10.10.10.20	YES	manual	up	up
GigabitEthernet4/0	unassigned	YES	NVRAM	administratively down	down
Loopback0	172.16.15.10	YES	manual		

What does router R1 use as its OSPF router-ID?

- A. 10.10.1.10
- B. 10.10.10.20
- C. 172.16.15.10
- D. 192.168.0.1

Correct Answer: C

Section: (none)

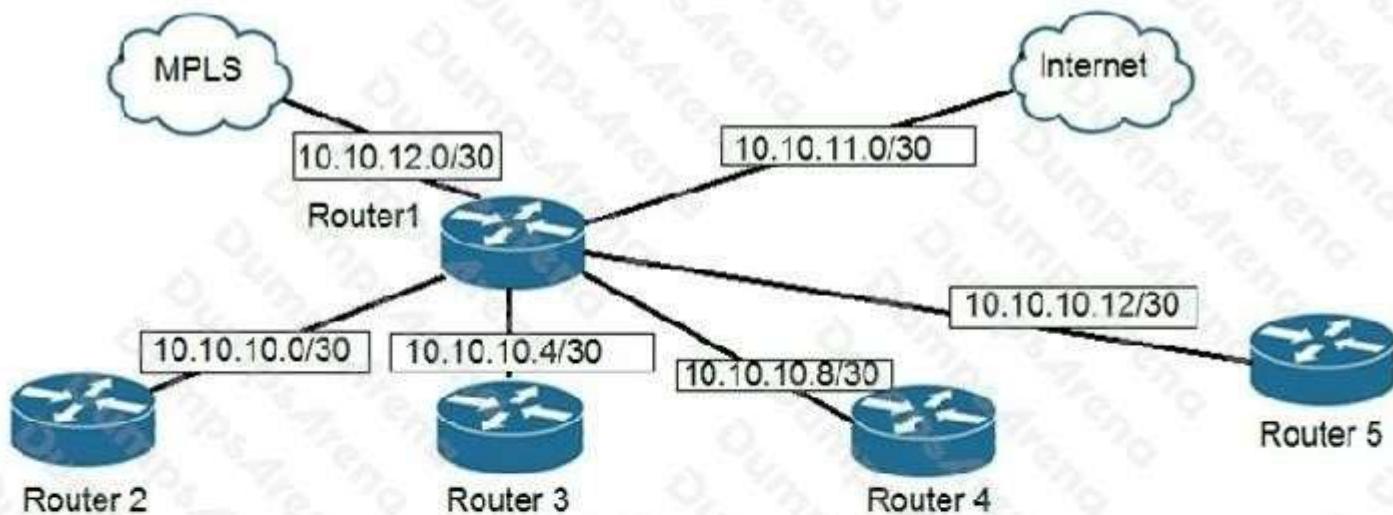

Explanation

Explanation/Reference:

OSPF uses the following criteria to select the router ID:1. Manual configuration of the router ID (via the "router-id x.x.x.x" command under OSPF router configuration mode).2. Highest IP address on a loopback interface.3. Highest IP address on a non-loopback and active (no shutdown) interface.

QUESTION 420

Refer to the exhibit.

Router1#show ip route

Gateway of last resort is 10.10.11.2 to network 0.0.0.0

209.165.200.0/27 is subnetted, 1 subnets

B 209.165.200.224 [20/0] via 10.10.12.2, 03:22:14

209.165.201.0/27 is subnetted, 1 subnets

B 209.165.201.0 [20/0] via 10.10.12.2, 02:26:33

209.165.202.0/27 is subnetted, 1 subnets

B 209.165.202.128 [20/0] via 10.10.12.2, 02:26:03

10.0.0.0/8 is variably subnetted, 10 subnets, 4 masks

O 10.10.13.0/25 [110/2] via 10.10.10.1, 00:00:04, GigabitEthernet0/0

O 10.10.13.128/28 [110/2] via 10.10.10.5, 00:00:12, GigabitEthernet0/1

O 10.10.13.144/28 [110/2] via 10.10.10.9, 00:01:57, GigabitEthernet0/2

O 10.10.13.160/29 [110/2] via 10.10.10.5, 00:00:12, GigabitEthernet0/1

O 10.10.13.208/29 [110/2] via 10.10.10.13, 00:01:57, GigabitEthernet0/3

S* 0.0.0.0/0 [1/0] via 10.10.11.2

To which device does Router1 send packets that are destined to host 10.10.13.165?

- A. Router2
- B. Router3
- C. Router4
- D. Router5

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 421
 - (DRAG DROP)

Refer to the exhibit.

```
C:\>ipconfig/all
Windows IP Configuration

Host Name . . . . . : Inspiron15
Primary Dns Suffix . . . . . :
Node Type . . . . . : Mixed
IP Routing Enabled . . . . . : No
WINS Proxy Enabled . . . . . : No

Wireless LAN adapter Local Area Connection* 12:
  Media State . . . . . : Media disconnected
  Connection-specific DNS Suffix . . . . . :
  Description . . . . . : Microsoft Wi-Fi Direct Virtual Adapter
  Physical Address . . . . . : 10-76-3F-7C-57-DF
  DHCP Enabled . . . . . : Yes
  Auto-configuration Enabled . . . . . : Yes

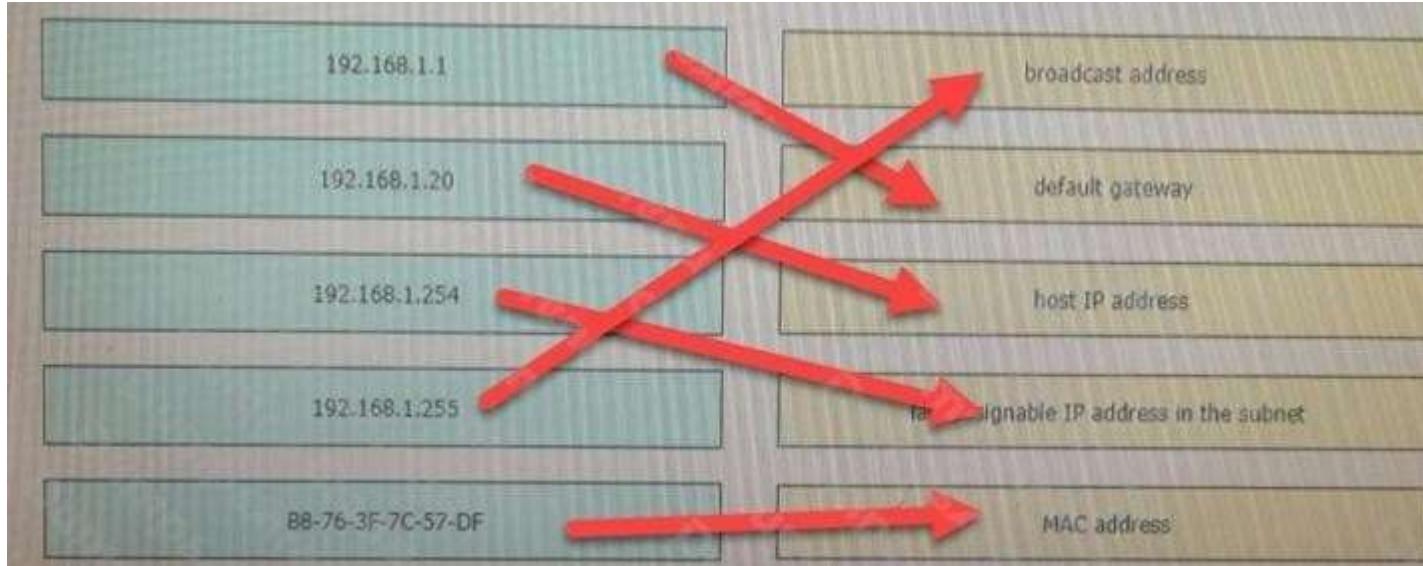

Wireless LAN adapter Wi-Fi:
  Connection-specific DNS Suffix . . . . . :
  Description . . . . . : Dell Wireless 1703 802.11b/g/n (2.4GHz)
  Physical Address . . . . . : B8-76-3F-7C-57-DF
  DHCP Enabled . . . . . : No
  Auto-configuration Enabled . . . . . : Yes
  Link-local IPv6 Address . . . . . :
    fe80::e09f:9839%12<Preferred>
    192.168.1.20<Preferred>
    255.255.255.0
    192.168.1.1
    263247135
  DHCPv6 IAID . . . . . : 00-01-00-01-18-E6-32-43-B8-76-3F-7C-57-DF
  DHCPv6 Client DUID . . . . . :
    192.168.1.15
    192.168.1.16
  NetBIOS over Tcpip . . . . . : Enabled
```

An engineer is tasked with verifying network configuration parameters on a client workstation to report back to the team lead. Drag and drop the node identifiers from the left onto the network parameters on the right.

192.168.1.1	broadcast address
192.168.1.20	default gateway
192.168.1.254	host IP address
192.168.1.255	last assignable IP address in the subnet
B8-76-3F-7C-57-DF	MAC address

Answer:

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

```
R1# sh ip ospf int gig0/0
Gig0/0 is up, line protocol is up
  Internet Address 10.201.24.8/28, Area 1, Attached via Network Statement
  Process ID 100, Router ID 192.168.1.1, Network Type BROADCAST, Cost: 1
  Topology-MTID    Cost    Disabled    Shutdown    Topology Name
                0        1        no        no        Base
  Transmit Delay is 1 sec, State DR, Priority 1
  Designated Router (ID) 192.168.1.1, Interface address 10.201.24.8
  No backup designated router on this network
  Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
    oob-resync timeout 40
    Hello due in 00:00:07

R2#sh ip ospf int gig0/0
gig0/0 is up, line protocol is up
  Internet Address 10.201.24.1/28, Area 1
  Process ID 100, Router ID 172.16.1.1, Network Type BROADCAST, Cost: 1
  Transmit Delay is 1 sec, State DR, Priority 1
  Designated Router (ID) 172.16.1.1, Interface address 10.201.24.1
  No backup designated router on this network
  Timer intervals configured, Hello 20, Dead 80, Wait 80, Retransmit 5
```

QUESTION 422

Refer to the exhibit.

What action establishes the OSPF neighbor relationship without forming an adjacency?

- A. modify hello interval
- B. modify process ID
- C. modify priority
- D. modify network type

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 423

What are two descriptions of three-tier network topologies? (Choose two)

- A. The core and distribution layers perform the same functions
- B. The access layer manages routing between devices in different domains
- C. The network core is designed to maintain continuous connectivity when devices fail.
- D. The core layer maintains wired connections for each host
- E. The distribution layer runs Layer 2 and Layer 3 technologies

Correct Answer: CE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 424

Which set of action satisfy the requirement for multifactor authentication?

- A. The user swipes a key fob, then clicks through an email link
- B. The user enters a user name and password, and then clicks a notification in an authentication app on a mobile device
- C. The user enters a PIN into an RSA token, and then enters the displayed RSA key on a login screen
- D. The user enters a user name and password and then re-enters the credentials on a second screen

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

This is an example of how two-factor authentication (2FA) works:
1. The user logs in to the website or service with their username and password.
2. The password is validated by an authentication server and, if correct, the user becomes eligible for the second factor.
3. The authentication server sends a unique code to the user's second-factor method (such as a smartphone app).
4. The user confirms their identity by providing the additional authentication for their second-factor method.

QUESTION 425

Refer to the exhibit.

Designated Router (ID) 10.11.11.11, Interface address 10.10.10.1
Backup Designated router (ID) 10.3.3.3, Interface address 10.10.10.3
Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
oob-resync timeout 40
Hello due in 00:00:08
Supports Link-local Signaling (LLS)
Cisco NSF helper support enabled
IETF NSF helper support enabled
Index 1/1/1, flood queue length 0
Next 0x0(0)/0x0(0)/0x0(0)
Last flood scan length is 1, maximum is 6
Last flood scan time is 0 msec, maximum is 1 msec
Neighbor Count is 3, Adjacent neighbor count is 3
Adjacent with neighbor 10.1.1.4
Adjacent with neighbor 10.2.2.2
Adjacent with neighbor 10.3.3.3 (Backup Designated Router)
Suppress hello for 0 neighbor(s)

The show ip ospf interface command has been executed on R1. How is OSPF configured?

- A. The interface is not participating in OSPF
- B. A point-to-point network type is configured
- C. The default Hello and Dead timers are in use
- D. There are six OSPF neighbors on this interface

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

<https://www.cisco.com/c/en/us/support/docs/ip/open-shortest-path-first-ospf/13689-17.html>

QUESTION 426

Which two values or settings must be entered when configuring a new WLAN in the Cisco Wireless LAN Controller GUI? (Choose two)

- A. management interface settings
- B. QoS settings
- C. IP address of one or more access points
- D. SSID

E. Profile name

Correct Answer: DE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 427

Which two outcomes are predictable behaviors for HSRP? (Choose two)

- A. The two routers share a virtual IP address that is used as the default gateway for devices on the LAN.
- B. The two routers negotiate one router as the active router and the other as the standby router
- C. Each router has a different IP address both routers act as the default gateway on the LAN, and traffic is load balanced between them.
- D. The two routers synchronize configurations to provide consistent packet forwarding
- D. The two routers share the same IP address, and default gateway traffic is load-balanced between them

Correct Answer: AB

Section: (none)

Explanation

Explanation/Reference:

QUESTION 428

A user configured OSPF and advertised the Gigabit Ethernet interface in OSPF. By default, which type of OSPF network does this interface belong to?

- A. point-to-multipoint
- B. point-to-point
- C. broadcast
- D. nonbroadcast

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

<https://www.oreilly.com/library/view/cisco-ios-cookbook/0596527225/ch08s15.html>

The Broadcast network type is the default for an OSPF enabled ethernet interface (while Point-toPoint is the default OSPF network type for Serial interface with HDLC and PPP encapsulation).

QUESTION 429

Which goal is achieved by the implementation of private IPv4 addressing on a network?

- A. provides an added level of protection against Internet exposure
- B. provides a reduction in size of the forwarding table on network routers
- C. allows communication across the Internet to other private networks
- D. allows servers and workstations to communicate across public network boundaries

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 430

Refer to the exhibit.

```
R1# show ip route | begin gateway
Gateway of last resort is 209.165.200.246 to network 0.0.0.0
S* 0.0.0.0/0 [1/0] via 209.165.200.246, Serial0/1/0
    is directly connected, Serial0/1/0
    172.16.0.0/16 is variably subnetted, 3 subnets, 3 masks
S   172.16.0.0/24 [1/0] via 207.165.200.250, Serial0/0/0
O   172.16.0.128/25 [110/38443] via 207.165.200.254, 00:00:23, Serial0/0/1
D   172.16.0.192/29 [90/3184439] via 207.165.200.254, 00:00:25, Serial0/0/1
    209.165.200.0/24 is variably subnetted, 4 subnets, 2 masks
C   209.165.200.248/30 is directly connected, Serial0/0/0
L   209.165.200.249/32 is directly connected, Serial0/0/0
C   209.165.200.252/30 is directly connected, Serial0/0/1
L   209.165.200.253/32 is directly connected, Serial0/0/1
```

With which metric was the route to host 172.16.0.202 learned?

- A. 0
- B. 110
- C. 38443
- D. 3184439

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Both the line "O 172.16.0.128/25" and "S 172.16.0.0/24" cover the host 172.16.0.202 but with the "longest (prefix) match" rule the router will choose the first route.

QUESTION 431

How does WPA3 improve security?

- A. It uses SAE for authentication.
- B. It uses a 4-way handshake for authentication.
- C. It uses RC4 for encryption.
- D. It uses TKIP for encryption.

Correct Answer: A

Section: (none)

QUESTION 440

Refer to the exhibit.

An engineer must configure GigabitEthernet1/1 to accommodate voice and data traffic. Which configuration accomplishes this task?

```
interface gigabitethernet1/1
switchport mode access
switchport access vlan 300
switchport voice vlan 400
```

```
interface gigabitethernet1/1
switchport mode trunk
switchport trunk vlan 300
switchport voice vlan 400
```

```
interface gigabitethernet1/1
switchport mode trunk
switchport trunk vlan 300
switchport trunk vlan 400
```

```
interface gigabitethernet1/1
switchport mode access
switchport voice vlan 300
switchport access vlan 400
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 441

Refer to the exhibit.

```
R1#show running-config
Building configuration...
!
interface GigabitEthernet1/0
  mtu 1600
  ip address 192.168.0.1 255.255.255.252
  negotiation auto
!
router ospf 1
  router-id 1.1.1.1
  passive-interface default
  no passive-interface GigabitEthernet1/0
  network 192.168.0.1 0.0.0.0 area 0
!
R2#show running-config
Building configuration...
!
interface GigabitEthernet2/0
  ip address 192.168.0.2 255.255.255.252
  negotiation auto
!
router ospf 1
  router-id 2.2.2.2
  passive-interface default
  no passive-interface GigabitEthernet2/0
  network 192.168.0.2 0.0.0.0 area 0
```

Which configuration issue is preventing the OSPF neighbor relationship from being established between the two routers?

- A. R2 is using the passive-interface default command
- B. R1 has an incorrect network command for interface Gi1/0
- C. R2 should have its network command in area 1
- D. R1 interface Gi1/0 has a larger MTU size

Correct Answer: D

Section: (none)

QUESTION 446

Which protocol requires authentication to transfer a backup configuration file from a router to a remote server?

- A. DTP
- B. FTP
- C. SMTP
- D. TFTP

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 447

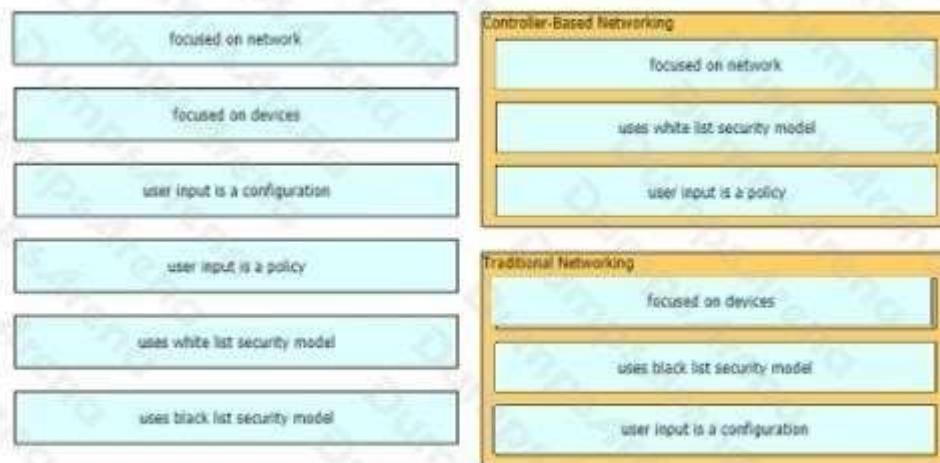

- (DRAG DROP)

Drag and drop to the characteristics of networking from the left onto the correct networking types on the right.

Answer:

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Controller-Based Networking

Traditional Networking

focused on network
 uses white list security model
 user input is a policy

focused on devices
 uses black list security model
 user input is a configuration

QUESTION 448

Which type of traffic is sent with pure IPsec?

- A. broadcast packets from a switch that is attempting to locate a MAC address at one of several remote sites
- B. multicast traffic from a server at one site to hosts at another location
- C. spanning-tree updates between switches that are at two different sites
- D. unicast messages from a host at a remote site to a server at headquarters

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

"The original poster makes a correct observation that EIGRP does not work in a pure IPSEC environment. IPSEC was designed to process unicast traffic.

QUESTION 449

What is the function of a server?

- A. It transmits packets between hosts in the same broadcast domain.
- B. It provides shared applications to end users.
- C. It routes traffic between Layer 3 devices.
- D. It creates security zones between trusted and untrusted networks

Correct Answer: B

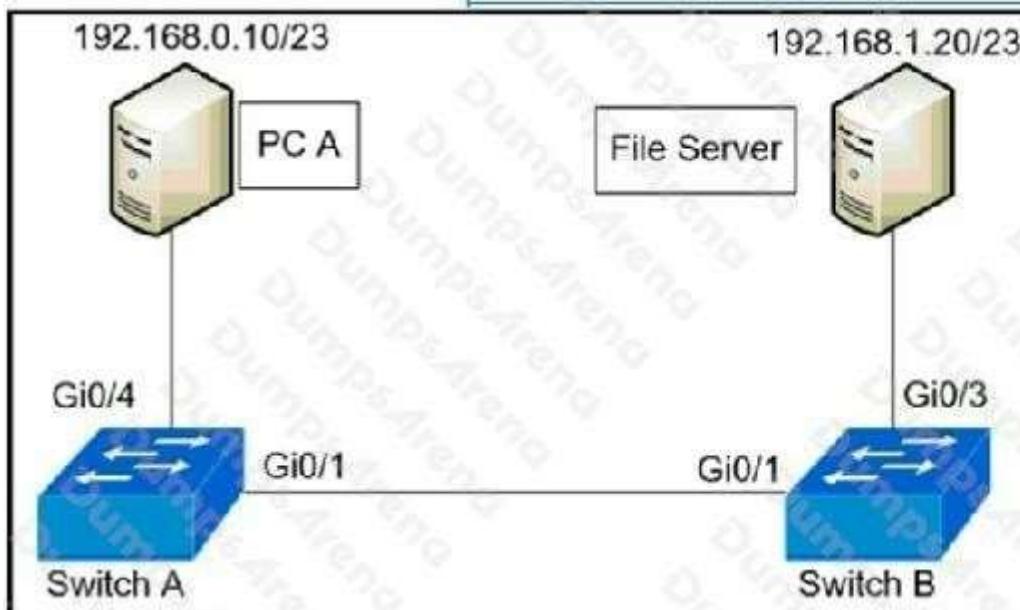

Section: (none)

Explanation

Explanation/Reference:

QUESTION 450

Refer to the exhibit.

Switch A

Vlan 10,11,12,13

```

interface GigabitEthernet0/1
switchport mode trunk
switchport trunk allowed vlan 10-12
!
interface GigabitEthernet0/4
switchport access vlan 13
switchport mode access
  
```

Switch B

Vlan 10,11,12,13

```

interface GigabitEthernet0/1
switchport mode trunk
!
interface GigabitEthernet0/3
switchport access vlan 13
switchport mode access
  
```

A network administrator assumes a task to complete the connectivity between PC A and the File Server. Switch A and Switch B have been partially configured with VLAN 10, 11, 12, and 13. What is the next step in the configuration?

- A. Add PC A to VLAN 10 and the File Server to VLAN 11 for VLAN segmentation
- B. Add VLAN 13 to the trunk links on Switch A and Switch B for VLAN propagation
- C. Add a router on a stick between Switch A and Switch B allowing for Inter-VLAN routing.
- D. Add PC A to the same subnet as the File Server allowing for intra-VLAN communication.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 451

Which two primary drivers support the need for network automation? (Choose two.)

- A. Eliminating training needs
- B. Increasing reliance on self-diagnostic and self-healing
- C. Policy-derived provisioning of resources
- D. Providing a single entry point for resource provisioning
- E. Reducing hardware footprint

Correct Answer: CD

Section: (none)

Explanation

QUESTION 452

Which network plane is centralized and manages routing decisions?

- A. policy plane
- B. management plane
- C. control plane
- D. data plane

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 453

An implementer is preparing hardware for virtualization to create virtual machines on a host. What is needed to provide communication between hardware and virtual machines?

- A. hypervisor
- B. router
- C. straight cable
- D. switch

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 454

What does an SDN controller use as a communication protocol to relay forwarding changes to a southbound API?

- A. OpenFlow
- B. Java
- C. REST
- D. XML

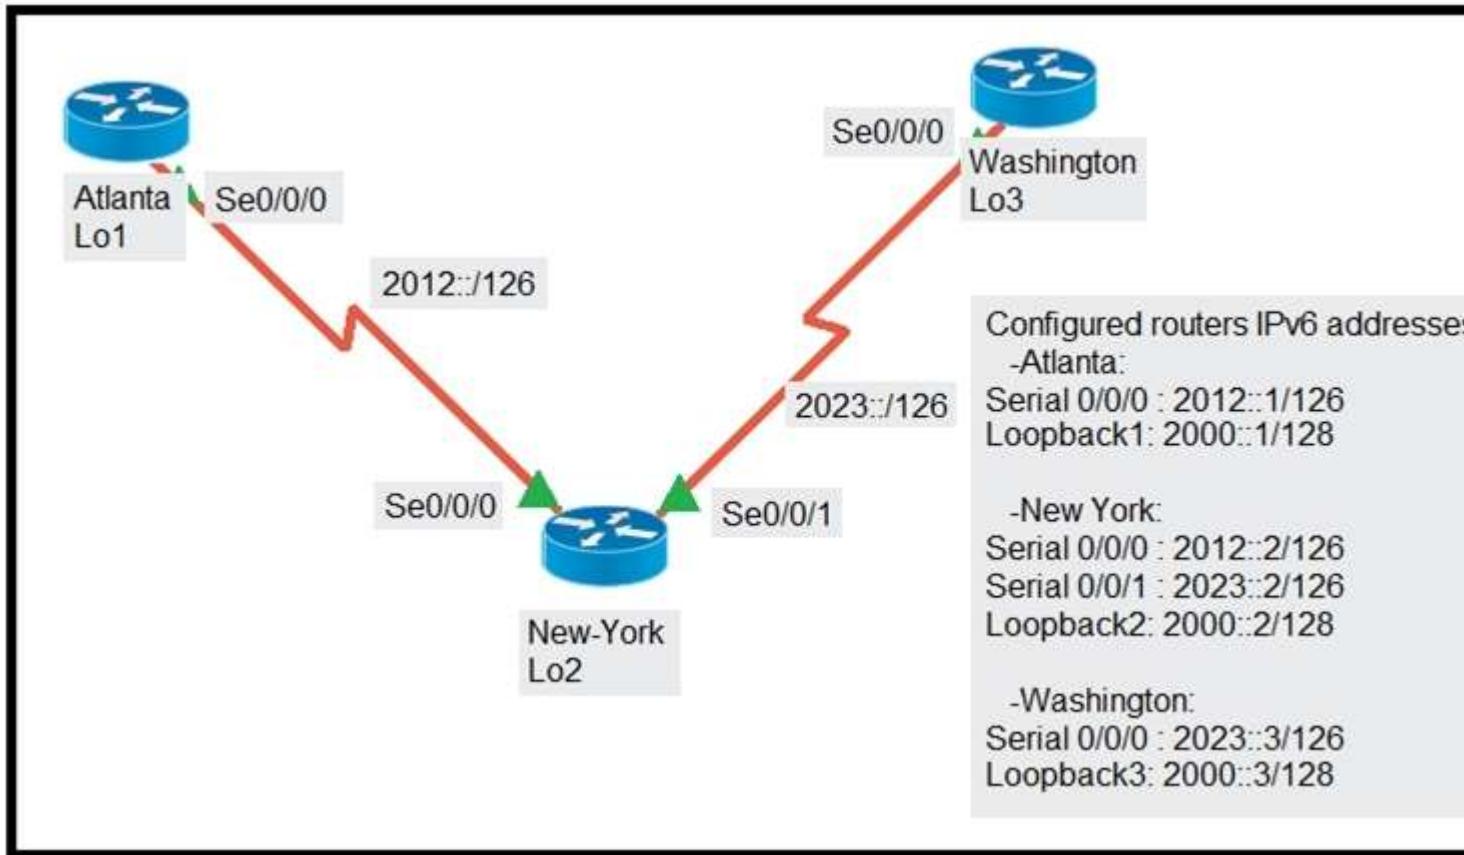

Correct Answer: A

Section: (none)
Explanation

Explanation/Reference:

QUESTION 455

Refer to the exhibit.

The New York router is configured with static routes pointing to the Atlanta and Washington sites. Which two tasks must be performed so that the Serial0/0/0 interfaces on the Atlanta and Washington routers can reach one another? (Choose two.)

- A. Configure the ipv6 route 2012::/126 2023::1 command on the Washington router.
- B. Configure the ipv6 route 2023::/126 2012::1 command on the Atlanta router.
- C. Configure the Ipv6 route 2012::/126 s0/0/0 command on the Atlanta router.
- D. Configure the ipv6 route 2023::/126 2012::2 command on the Atlanta router.
- E. Configure the ipv6 route 2012::/126 2023::2 command on the Washington router.

Correct Answer: DE

Section: (none)
Explanation

Explanation/Reference:

The short syntax of static IPv6 route is:ipv6 route {next-hop-IPv6-address | exit-interface}

QUESTION 456

What are two differences between optical-fiber cabling and copper cabling? (Choose two)

- A. Light is transmitted through the core of the fiber
- B. A BNC connector is used for fiber connections
- C. The glass core component is encased in a cladding
- D. Fiber connects to physical interfaces using Rj-45 connections
- E. The data can pass through the cladding

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 457

Which QoS tool is used to optimize voice traffic on a network that is primarily intended for data traffic?

- A. FIFO
- B. WFQ
- C. PQ
- D. WRED

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 458

Refer to the exhibit.

```

Switch1#show etherchannel summary
Flags:  D - down          P - in port-channel
        I - stand-alone  s - suspended
        H - Hot-standby (LACP only)
        R - Layer3         S - Layer2
        U - in use          f - failed to allocate aggregator
        u - unsuitable for bundling
        w - waiting to be aggregated
        d - default port

```

```

Number of channel-groups in use: 1
Number of aggregators: 1
Group  Port-channel  Protocol  Ports
-----+-----+-----+
1      Po1 (SD)      LACP      Fa0/2 (I) Fa0/1 (I)

```

```

Switch1#show run
Building configuration...
interface Port-channel1
!
interface FastEthernet0/1
  channel-group 1 mode passive
!
interface FastEthernet0/2
  channel-group 1 mode passive

```

```

Switch2#show run
Building configuration...
interface Port-channel1
!
interface FastEthernet0/1
  channel-group 1 mode passive
!
interface FastEthernet0/2
  channel-group 1 mode passive

```

Which change to the configuration on Switch?

allows the two switches to establish an EtherChannel?

- A. Change the protocol to EtherChannel mode on.
- B. Change the LACP mode to active
- C. Change the LACP mode to desirable
- D. Change the protocol to PAQP and use auto mode

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 459

What is the same for both copper and fiber interfaces when using SFP modules?

- A. They support an inline optical attenuator to enhance signal strength
- B. They provide minimal interruption to services by being hot-swappable
- C. They offer reliable bandwidth up to 100 Mbps in half duplex mode
- D. They accommodate single-mode and multi-mode in a single module

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 460

Refer to Exhibit.

```
SW2
vtp domain cisco
vtp mode transparent
vtp password ciscotest
interface fastethernet0/1
  description connection to sw1
  switchport mode trunk
  switchport trunk encapsulation dot1q
```

How does SW2 interact with other switches in this VTP domain?

- A. It processes VTP updates from any VTP clients on the network on its access ports.
- B. It receives updates from all VTP servers and forwards all locally configured VLANs out all trunk ports
- C. It forwards only the VTP advertisements that it receives on its trunk ports.
- D. It transmits and processes VTP updates from any VTP Clients on the network on its trunk ports

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 461

Refer to the exhibit.

The `nip server 192.168.0.3` command has been configured on router 1 to make it an NTP client of router 2. Which command must be configured on router 2 so that it operates in server-only mode and relies only on its internal clock?

- A. Router2(config)#ntp passive
- B. Router2(config)#ntp server 172.17.0.1
- C. Router2(config)#ntp master 4
- D. Router2(config)#ntp server 192.168.0.2

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

To use internal clock of this router, use any configured IP address in any interface of this router.

```
10.0.0.0/24 is subnetted, 1 subnets
C      10.0.0.0 is directly connected, FastEthernet0/1
C      172.160.0/16 is directly connected, FastEthernet0/0
D      192.168.0.0/24 [90/30720] via 172.16.0.2, 00:00:03, FastEthernet0/0
```

QUESTION 462

Refer to the exhibit.

- C 10.0.0.0/24 is subnetted, 1 subnets
- C 10.0.0.0 is directly connected, FastEthernet0/1
- C 172.160.0/16 is directly connected, FastEthernet0/0
- D 192.168.0.0/24 [90/30720] via 172.16.0.2, 00:00:03, FastEthernet0/0

Which route type does the routing protocol Code D represent in the output?

- A. internal BGP route
- B. 724 route of a locally configured IP
- C. statically assigned route
- D. route learned through EIGRP

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 463

A device detects two stations transmitting frames at the same time. This condition occurs after the first 64 bytes of the frame is received interface counter increments?

- A. collision
- B. CRC
- C. runt
- D. late collision

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

<https://www.cisco.com/c/en/us/support/docs/interfaces-modules/port-adapters/12768-eth-collisions.html>

QUESTION 464

- (DRAG DROP)

fundamental configuration elements are stored in a manifest

uses TCP port 10002 for configuration push jobs

uses Ruby for fundamental configuration elements

uses SSH for remote device communication

uses TCP 8140 for communication

uses YAML for fundamental configuration elements

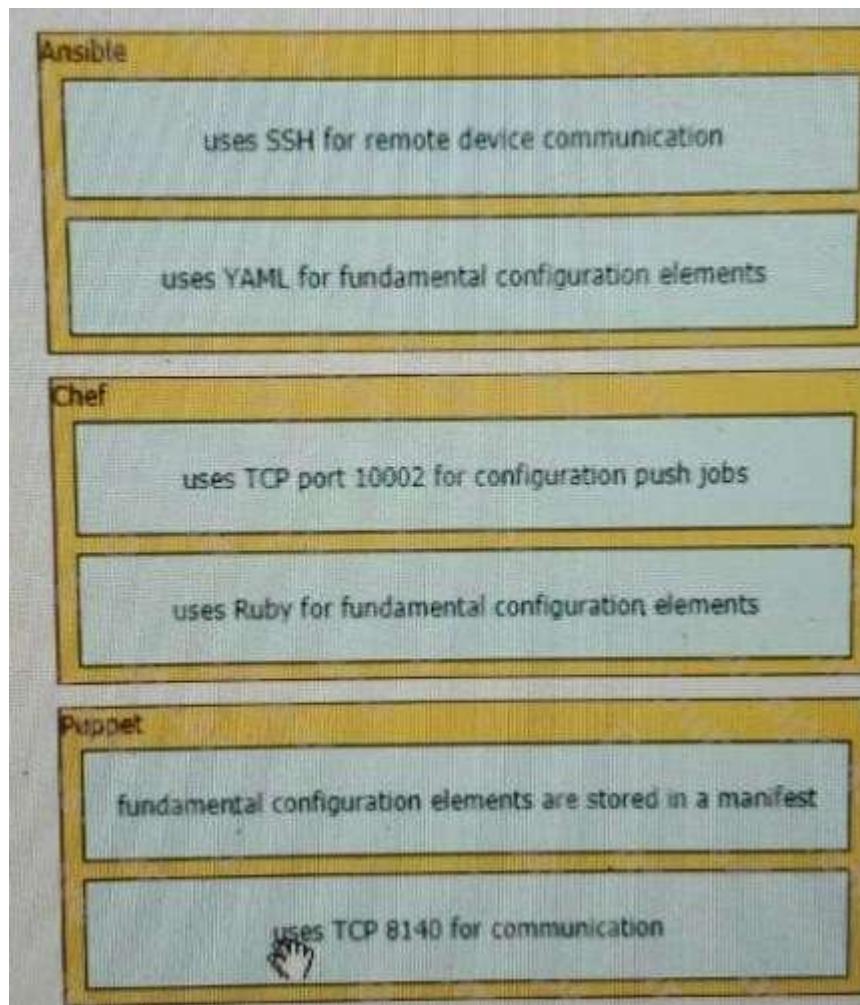

Ansible

Chef

Puppet

Answer:

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Ansible: uses SSH for remote device communication uses YAML for fundamental configuration elements
Chef:- uses TCP port 10002 for configuration push jobs uses Ruby for fundamental configuration elements
Puppet:- fundamental configuration elements are stored in a manifest uses TCP 8140 for communication

The focus of Ansible is to be streamlined and fast, and to require no node agent installation. Thus, Ansible performs all functions over SSH. Ansible is built on Python, in contrast to the Ruby foundation of Puppet and Chef. TCP port 10002 is the command port. It may be configured in the Chef Push Jobs configuration file. This port allows Chef Push Jobs clients to communicate with the Chef Push Jobs server. Puppet is an open-source configuration management solution, which is built with Ruby and offers custom Domain Specific Language (DSL) and Embedded Ruby (ERB) templates to create custom Puppet language files, offering a declarative-paradigm programming approach. A Puppet piece of code is called a manifest, and is a file with .pp extension.

QUESTION 465

Which command must be entered when a device is configured as an NTP server?

- A. ntp authenticate
- B. ntp server
- C. ntp peer
- D. ntp master

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

To configure a Cisco device as an Authoritative NTP Server, use the `ntp master [stratum]` command. To configure a Cisco device as a NTP client, use the command `ntp server`. For example: Router(config)#`ntp server 192.168.1.1`. This command will instruct the router to query 192.168.1.1 for the time.

QUESTION 466

Which unified access point mode continues to serve wireless clients after losing connectivity to the Cisco Wireless LAN Controller?

- A. sniffer
- B. mesh
- C. flexconnect
- D. local

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 467

When a client and server are not on the same physical network, which device is used to forward requests and replies between client and server for DHCP?

- A. DHCP relay agent
- B. DHCP server
- C. DHCPDISCOVER
- D. DHCPOFFER

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 468

Refer to the exhibit.

```
R1# show ip route
D  192.168.10.0/24  [90/2679326]  via 192.168.1.1
R  192.168.10.0/27  [120/3]    via 192.168.1.2
O  192.168.10.0/23  [110/2]    via 192.168.1.3
i  L1   192.168.10.0/13 [115/30]   via 192.168.1.4
```

How does router R1 handle traffic to 192.168.10.16?

- A. It selects the IS-IS route because it has the shortest prefix inclusive of the destination address.
- B. It selects the EIGRP route because it has the lowest administrative distance.
- C. It selects the OSPF route because it has the lowest cost.
- D. It selects the RIP route because it has the longest prefix inclusive of the destination address.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 469

Which plane is centralized by an SDN controller?

- A. management-plane
- B. control-plane
- C. data-plane
- D. services-plane

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 470

What are two reasons for an engineer to configure a floating state route? (Choose two)

- A. to automatically route traffic on a secondary path when the primary path goes down
- B. to route traffic differently based on the source IP of the packet
- C. to enable fallback static routing when the dynamic routing protocol fails
- D. to support load balancing via static routing
- E. to control the return path of traffic that is sent from the router

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 471

What is a role of access points in an enterprise network?

- A. connect wireless devices to a wired network
- B. support secure user logins to devices or the network
- C. integrate with SNMP in preventing DDoS attacks
- D. serve as a first line of defense in an enterprise network

Correct Answer: A

Section: (none)**Explanation****Explanation/Reference:****QUESTION 472**

A user configured OSPF in a single area between two routers A serial interface connecting R1 and R2 is running encapsulation PPP. By default which OSPF network type is seen on this interface when the user types show ip ospf interface on R1 or R2?

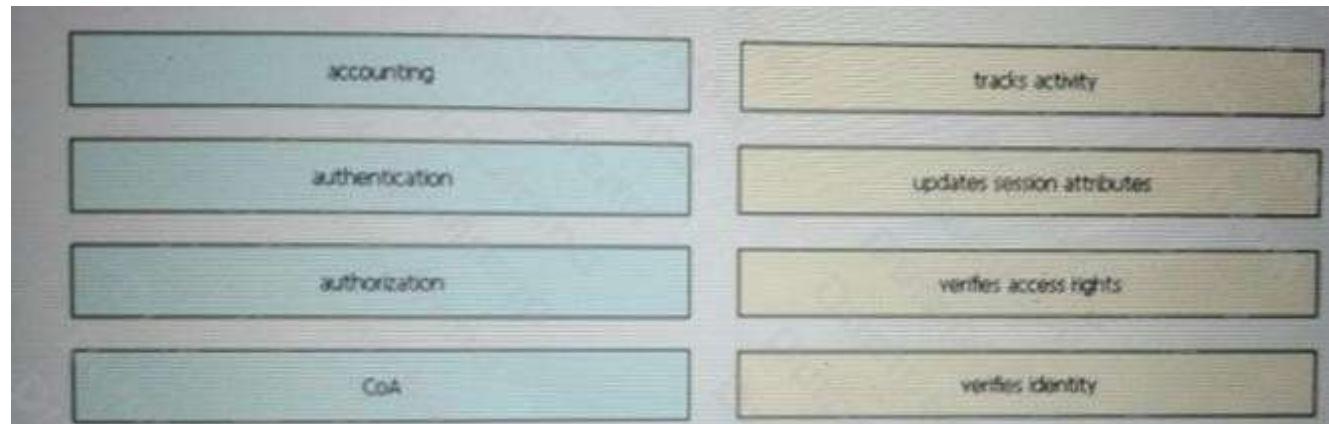

- A. port-to-multipoint
- B. broadcast
- C. point-to-point
- D. nonbroadcast

Correct Answer: C**Section: (none)****Explanation****Explanation/Reference:**

The default OSPF network type for HDLC and PPP on Serial link is point-to-point (while the default OSPF network type for Ethernet link is Broadcast).

QUESTION 473**- (DRAG DROP)**

Drag and drop the AAA terms from the left onto the description on the right.

**Answer:**

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

1-1, 2-4, 3-3, 4-2

QUESTION 474

What are two reasons that cause late collisions to increment on an Ethernet interface? (Choose two)

- A. when the sending device waits 15 seconds before sending the frame again
- B. when the cable length limits are exceeded
- C. when one side of the connection is configured for half-duplex
- D. when Carrier Sense Multiple Access/Collision Detection is used
- E. when a collision occurs after the 32nd byte of a frame has been transmitted

Correct Answer: BC

Section: (none)

Explanation

Explanation/Reference:

The usual possible causes are full-duplex/half-duplex mismatch, exceeded Ethernet cable length limits, or defective hardware such as incorrect cabling, non-compliant number of hubs in the network, or a bad NIC.

QUESTION 475

Which type of IPv6 address is publicly routable in the same way as IPv4 public address?

- A. global unicast
- B. link-local
- C. unique local
- D. multicast

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 476

When OSPF learns multiple paths to a network, how does it select a route?

- A. It multiplies the active K value by 256 to calculate the route with the lowest metric.
- B. For each existing interface, it adds the metric from the source router to the destination to calculate the route with the lowest bandwidth.
- C. It divides a reference bandwidth of 100 Mbps by the actual bandwidth of the existing interface to calculate the router with the lowest cost.
- D. It counts the number of hops between the source router and the destination to determine the router with the lowest metric

Correct Answer: C

Section: (none)

Explanation

Explanation

Explanation/Reference:

QUESTION 478

What makes Cisco DNA Center different from traditional network management applications and their management of networks?

- A. It omits supports auto-discovery of network elements in a greenfield deployment.
- B. Its modular design allows someone to implement different versions to meet the specific needs of an organization
- C. It abstracts policy from the actual device configuration
- D. It does not support high availability of management functions when operating in cluster mode

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 479

A wireless administrator has configured a WLAN; however, the clients need access to a less congested 5-GHz network for their voice quality. What action must be taken to meet the requirement?

- A. enable AAA override

- B. enable RX-SOP
- C. enable DTIM
- D. enable Band Select

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 480

What are two characteristics of a controller-based network? (Choose two)

- A. The administrator can make configuration updates from the CLI
- B. It uses northbound and southbound APIs to communicate between architectural layers
- C. It moves the control plane to a central point.
- D. It decentralizes the control plane, which allows each device to make its own forwarding decisions
- E. It uses Telnet to report system issues.

Correct Answer: BC

QUESTION 486

R1 as an NTP server must have:

- NTP authentication enabled
- NTP packets sourced from Interface loopback 0
- NTP stratum 2
- NTP packets only permitted to client IP 209.165 200 225 How should R1 be configured?

A.

```
ntp authenticate
ntp authentication-key 2 md5 CISCO123
ntp source Loopback0
nntp access-group server-only 10
ntp master 2
!
access-list 10 permit 209.165.200.225
```

B.

```
ntp authenticate
ntp authentication-key 2 md5 CISCO123
ntp source Loopback0
ntp access-group server-only 10
ntp stratum 2
!
access-list 10 permit udp host 209.165.200.225 any eq 123
```

- C. `ntp authenticate
ntp authentication-key 2 sha1 CISCO123
ntp source Loopback0
ntp access-group server-only 10
ntp master 2
!
access-list 10 permit udp host 209.165.200.225 any eq 123`

```

An engineer has started to configure replacement switch SW1. To verify part of the configuration, the engineer issued the commands as shown and noticed that the entry for PC2 is missing. Which change must be applied to SW1 so that PC1 and PC2 communicate normally?

- A. `SW1(config)#interface fa0/2
SW1(config-if)#no switchport mode trunk
SW1(config-if)#no switchport trunk allowed vlan 3
SW1(config-if)#switchport mode access`

- B. SW1(config)#interface fa0/1
SW1(config-if)#no switchport access vlan 2
SW1(config-if)#switchport trunk native vlan 2
SW1(config-if)#switchport trunk allowed vlan 3
- C. SW1(config)#interface fa0/1
SW1(config-if)#no switchport access vlan 2
SW1(config-if)#switchport access vlan 3
SW1(config-if)#switchport trunk allowed vlan 2
- D. SW1(config)#interface fa0/2
SW1(config-if)#no switchport access vlan 2
SW1(config-if)#no switchport trunk allowed vlan 3
SW1(config-if)#switchport trunk allowed vlan 2

Correct Answer: A

QUESTION 502

Refer to the exhibit.

The router has been configured with a supernet to accommodate the requirement for 380 users on a subnet. The requirement already considers 30% future growth. Which configuration verifies the IP subnet on router R4?

- A.
 - Subnet: 10.7.54.0
 - Subnet mask: 255.255.254.0
 - Broadcast address: 10.7.55.255
 - Usable IP address range: 10.7.54.1 - 10.7.55.254
- B.

Subnet: 10.7.54.0
Subnet mask: 255.255.254.0
Broadcast address: 10.7.55.255
Usable IP address range: 10.7.54.1 - 10.7.55.254

C. Subnet: 10.7.54.0
Subnet mask: 255.255.128.0
Broadcast address: 10.7.55.255
Usable IP address range: 10.7.54.1 - 10.7.55.254

D. Subnet: 10.7.54.0
Subnet mask: 255.255.255.0
Broadcast address: 10.7.54.255
Usable IP address range: 10.7.54.1 - 10.7.55.254

QUESTION 507

Refer to the exhibit.

The screenshot shows the Cisco Wireless LAN Controller (WLC) interface. The top navigation bar includes links for MONITOR, WLANs, CONTROLLER, WIRELESS, SECURITY, MANAGEMENT, and COMMANDS. The SECURITY tab is currently selected. On the left, a navigation tree under the AAA section includes: General, RADIUS (selected), Authentication, Accounting, Fallback, DNS, Downloaded AvP, TACACS+, LDAP, Local Net Users, MAC Filtering, Disabled Clients, User Login Policies, AP Policies, Password Policies, Local EAP, Advanced EAP, Priority Order, Certificate, Access Control Lists, and Wireless Protection Policies. The RADIUS section is expanded. The main content area is titled "RADIUS Authentication Servers > New". It contains the following configuration fields:

Server Index (Priority)	1
Server IP Address(Ipv4/Ipv6)	192.168.25.2
Shared Secret Format	ASCII
Shared Secret	*****
Confirm Shared Secret	*****
Key Wrap	<input type="checkbox"/> (Designed for FIPS customers and requires a key wrap compliant RADIUS server)
Port Number	1812
Server Status	Enabled
Support for CoA	Disabled
Server Timeout	2 seconds
Network User	<input type="checkbox"/> Enable
Management	<input type="checkbox"/> Enable
Management Retransmit Timeout	2 seconds
Tunnel Proxy	<input type="checkbox"/> Enable
IPSec	<input type="checkbox"/> Enable

A network engineer configures the Cisco WLC to authenticate local wireless clients against a RADIUS server. Which task must be performed to complete the process?

- A. Change the Server Status to Disabled
- B. Select Enable next to Management
- C. Select Enable next to Network User
- D. Change the Support for CoA to Enabled.

```

The DHCP server and clients are connected to the same switch. What is the next step to complete the DHCP configuration to allow clients on VLAN 1 to receive addresses from the DHCP server?

- A. Configure the ip dhcp snooping trust command on the interface that is connected to the DHCP client.
- B. Configure the ip dhcp relay information option command on the interface that is connected to the DHCP client.
- C. Configure the ip dhcp snooping trust command on the interface that is connected to the DHCP server.
- D. Configure the ip dhcp relay information option command on the interface that is connected to the DHCP server.

Correct Answer: C

QUESTION 532

- (DRAG DROP)

Drag and drop the elements of a security program from the left onto the corresponding descriptions on the right

awareness

document that outlines an organization's security goals and practices and the roles and responsibilities of the organization's personnel

education

tactical document that sets out specific tasks and methods to maintain security

security policy

user-awareness learning level that focuses on learning about topics and practices beyond what is typically required by the user's job

security standard

user-awareness learning level that focuses on security practices that all employees must understand and enforce

training

user-awareness learning level that focuses on teaching employees how to perform tasks specifically required by their jobs

Answer:

A.

awareness	document that outlines an organization's security goals and practices and the roles and responsibilities of the organization's personnel
education	tactical document that sets out specific tasks and methods to maintain security
security policy	user-awareness learning level that focuses on learning about topics and practices beyond what is typically required by the user's job
security standard	user-awareness learning level that focuses on security practices that all employees must understand and enforce
training	user-awareness learning level that focuses on teaching employees how to perform tasks specifically required by their jobs

Correct Answer: A

QUESTION 534

Refer to the exhibit.

The screenshot shows a Cisco configuration interface for a WLAN. The top navigation bar includes tabs for General, Security, QoS, Policy-Mapping, Advanced, Layer 2, Layer 3, and AAA Servers. The Layer 3 tab is selected. The main configuration area is titled 'Layer 2 Security' and shows 'WPA+WPA2' selected. Under 'WPA+WPA2 Parameters', 'WPA2 Policy' is checked, and 'CCMP128(AES)' is selected for WPA2 Encryption, while TKIP, CCMP256, GCMP128, and GCMP256 are disabled. The 'Fast Transition' section shows 'Fast Transition' set to 'Disable'. The 'Protected Management Frame' section shows 'PMF' set to 'Disabled'. The 'Authentication Key Management' section shows '802.1X-SHA1' set to 'Enable'.

What must be configured to enable 802.11w on the WLAN?

- A. Set PMF to Required.
- B. Enable MAC Filtering.
- C. Enable WPA Policy.
- D. Set Fast Transition to Enabled

Correct Answer: A

QUESTION 547

Which command do you enter so that a switch configured with Rapid PVST + listens and learns for a specific time period?

- A. switch(config)#spanning-tree vlan 1 max-age 6
- B. switch(config)#spanning-tree vlan 1 hello-time 10
- C. switch(config)#spanning-tree vlan 1 priority 4096
- D. switch(config)#spanning-tree vlan 1 forward-time 20

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Forward time : Determines how long each of the listening and learning states last before the port begins forwarding.

Switch(config)# [no] spanning-tree vlan vlan_ID forward-time forward_timeConfigures the forward time of a VLAN. The forward_time value can be from 4 to 30 seconds.

https://www.cisco.com/c/en/us/td/docs/switches/lan/catalyst4500/12-2/15-02SG/configuration/guide/config_spantree.html#56177

QUESTION 548

What is a feature of WPA?

- A. 802.1x authentication
- B. preshared key
- C. TKIP/MIC encryption
- D. small Wi-Fi application

Correct Answer: A

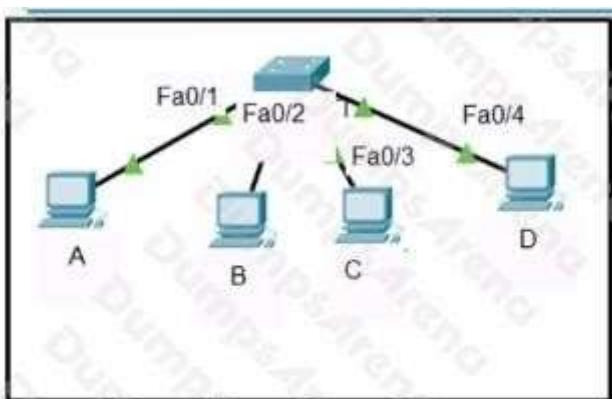

Section: (none)

Explanation

Explanation/Reference:

QUESTION 549

Refer to the exhibit.

Host A sent a data frame destined for host D

```
SwitchA#show mac-address table  
Mac Address Table
```

Vlan	Mac Address	Type	Ports
2	000c.859c.bb7b	DYNAMIC	Fa0/1
2	0010.11dc.3e91	DYNAMIC	Fa0/2
2	0041.45d7.c451	DYNAMIC	Fa0/3

What does the switch do when it receives the frame from host A?

- A. It drops the frame from the switch CAM table.
- B. It floods the frame out of all ports except port Fa0/1.
- C. It shuts down the port Fa0/1 and places it in err-disable mode.
- D. It experiences a broadcast storm.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 550

What is the function of "off-the-shelf" switches in a controller-based network?

- A. providing a central view of the deployed network
- B. forwarding packets
- C. making routing decisions
- D. setting packet-handling policies

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 551

What is a function of an endpoint on a network?

- A. forwards traffic between VLANs on a network
- B. connects server and client devices to a network
- C. allows users to record data and transmit to a tile server
- D. provides wireless services to users in a building

Correct Answer: C

Section: (none)

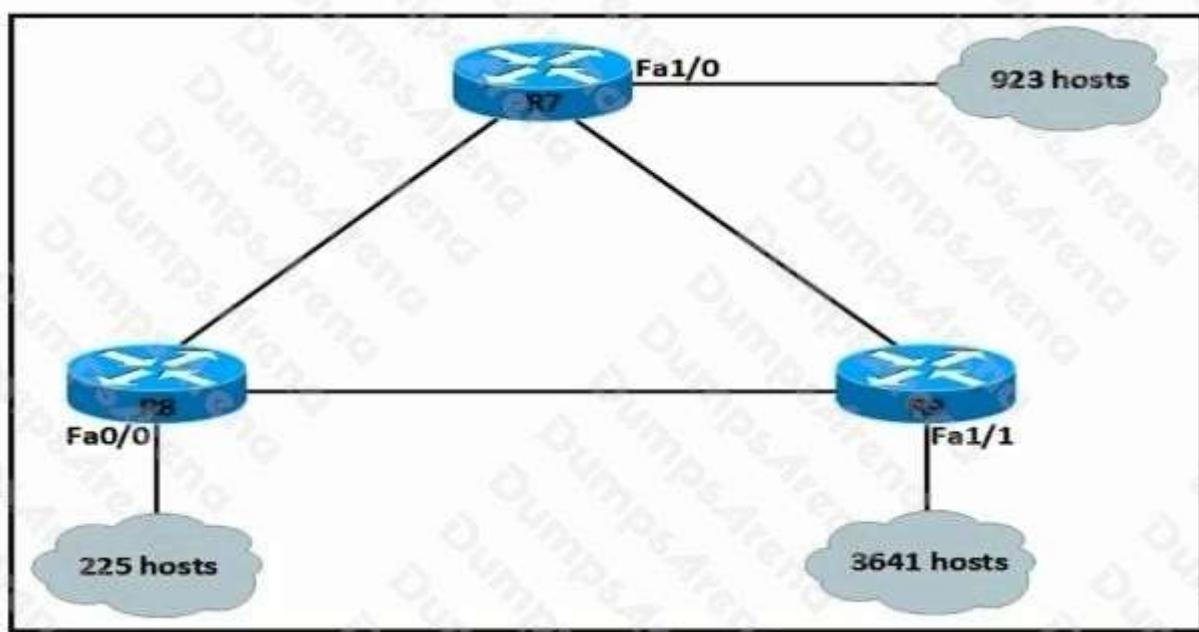

Explanation

Explanation/Reference:

An endpoint is a host that acts as the source or destination of data traffic flowing through a network. When you are at your PC, editing your CV and uploading it to a file server, you are sitting at an endpoint.

QUESTION 552

Refer to the exhibit.

An IP subnet must be configured on each router that provides enough addresses for the number of assigned hosts and anticipates no more than 10% growth for new hosts. Which configuration script must be used?

A.

```

R7#
configure terminal
interface Fa1/0
ip address 10.1.56.1 255.255.252.0
no shutdown

R8#
configure terminal
interface Fa0/0
ip address 10.9.32.1 255.255.255.0
no shutdown

R9#
configure terminal
interface Fa1/1
ip address 10.23.96.1 255.255.240.0
no shutdown

```

B.

```

R7#
configure terminal
interface Fa1/0
ip address 10.1.56.1 255.255.248.0
no shutdown

R8#
configure terminal
interface Fa0/0
ip address 10.9.32.1 255.255.254.0
no shutdown

R9#
configure terminal
interface Fa1/1
ip address 10.23.96.1 255.255.248.0
no shutdown

```

C. R7#
configure terminal
interface Fa1/0
ip address 10.1.56.1 255.255.240.0
no shutdown

R8#
configure terminal
interface Fa0/0
ip address 10.9.32.1 255.255.224.0
no shutdown

R9#
configure terminal
interface Fa1/1
ip address 10.23.96.1 255.255.192.0
no shutdown

D. R7#
configure terminal
interface Fa1/0
ip address 10.1.56.1 255.255.192.0
no shutdown

R8#
configure terminal
interface Fa0/0
ip address 10.9.32.1 255.255.224.0
no shutdown

R9#
configure terminal
interface Fa1/1
ip address 10.23.96.1 255.255.128.0
no shutdown

QUESTION 556

An engineer is configuring remote access to a router from IP subnet 10.139.58.0/28. The domain name, crypto keys, and SSH have been configured. Which configuration enables the traffic on the destination router?

- A.

```
interface FastEthernet0/0
  ip address 10.122.49.1 255.255.255.240
  access-group 120 in

  ip access-list extended 120
  permit tcp 10.139.58.0 255.255.255.248 any eq 22
```

- B. **interface FastEthernet0/0**
 ip address 10.122.49.1 255.255.255.252
 ip access-group 110 in

 ip access-list extended 110
 permit tcp 10.139.58.0 0.0.0.15 host 10.122.49.1 eq 22
- C. **interface FastEthernet0/0**
 ip address 10.122.49.1 255.255.255.248
 ip access-group 10 in

 ip access-list standard 10
 permit udp 10.139.58.0 0.0.0.7 host 10.122.49.1 eq 22
- D. **interface FastEthernet0/0**
 ip address 10.122.49.1 255.255.255.252
 ip access-group 105 in

 ip access-list standard 105
 permit tcp 10.139.58.0 0.0.0.7 eq 22 host 10.122.49.1

QUESTION 557

Which REST method updates an object in the Cisco DNA Center Intent API?

- A. CHANGE
- B. UPDATE
- C. POST
- D. PUT

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

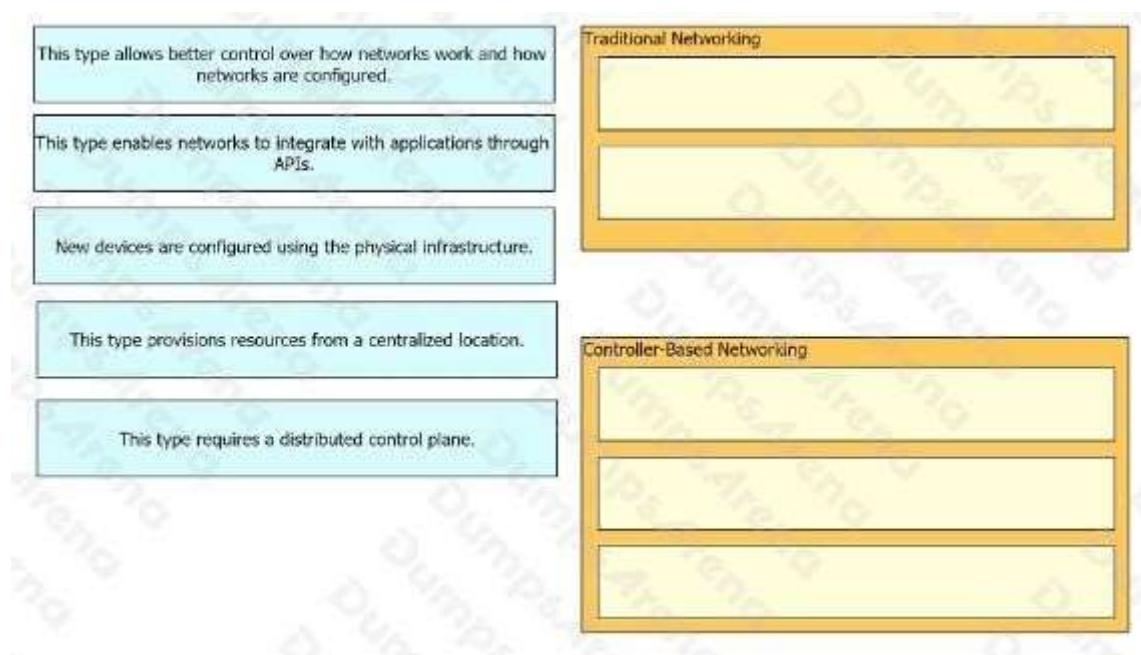

PUT is most-often utilized for **update** capabilities, PUT-ing to a known resource URI with the request body containing the newly-updated representation of the original resource. However, PUT can also be used to create a resource in the case where the resource ID is chosen by the client instead of by the server. In other words, if the PUT is to a URI that contains the value of a non-existent resource ID. Again, the request body contains a resource representation. Many feel this is convoluted and confusing. Consequently, this method of creation

should be used sparingly, if at all. Alternatively, use POST to create new resources and provide the client-defined ID in the body representation--presumably to a URI that doesn't include the ID of the resource (see POST below). On successful update, return 200 (or 204 if not returning any content in the body) from a PUT. If using PUT for create, return HTTP status 201 on successful creation. A body in the response is optional--providing one consumes more bandwidth. It is not necessary to return a link via a Location header in the creation case since the client already set the resource ID. PUT is not a safe operation, in that it modifies (or creates) state on the server, but it is idempotent. In other words, if you create or update a resource using PUT and then make that same call again, the resource is still there and still has the same state as it did with the first call. If, for instance, calling PUT on a resource increments a counter within the resource, the call is no longer idempotent. Sometimes that happens and it may be enough to document that the call is not idempotent. However, it's recommended to keep PUT requests idempotent. It is strongly recommended to use POST for non-idempotent requests.

QUESTION 558
- (DRAG DROP)

Drag and drop the statements about networking from the left onto the corresponding networking types on the right.

Answer:

A.

This type allows better control over how networks work and how networks are configured.	Traditional Networking
This type enables networks to integrate with applications through APIs.	New devices are configured using the physical infrastructure.
New devices are configured using the physical infrastructure.	This type provisions resources from a centralized location.
This type provisions resources from a centralized location.	Controller-Based Networking
This type requires a distributed control plane.	This type requires a distributed control plane.
	This type enables networks to integrate with applications through APIs.
	This type allows better control over how networks work and how networks are configured.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Traditional Networking

New devices are configured using the physical infrastructure.

This type provisions resources from a centralized location.

Controller-Based Networking

This type requires a distributed control plane.

This type enables networks to integrate with applications through APIs.

This type allows better control over how networks work and how networks are configured.

QUESTION 559

Refer to the exhibit.

```

interface GigabitEthernet0/0
 ip address 172.16.0.5 255.255.255.0
 duplex auto
 speed auto
!
interface GigabitEthernet0/1
 ip address 209.165.202.130 255.255.255.224
 duplex auto
 speed auto
!
ip nat inside source list 1 interface GigabitEthernet0/1 overload
!
access-list 1 permit 172.16.0.1
access-list 1 permit 172.16.0.2

```

How should the configuration be updated to allow PC1 and PC2 access to the Internet?

- A. Modify the configured number of the second access list.
- B. Add either the ip nat {inside|outside} command under both interfaces.
- C. Remove the overload keyword from the ip nat inside source command.
- D. Change the ip nat inside source command to use interface GigabitEthernet0/0.

Correct Answer: B

QUESTION 563

Which set of 2.4 GHz nonoverlapping wireless channels is standard in the United States?

- A. channels 2, 7, 9, and 11
- B. channels 1, 6, 11, and 14
- C. channels 2, 7, and 11
- D. channels 1, 6, and 11

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

In the United States, while channels 1-13 can be used for 2.4 GHz WiFi, only three channels are considered non-overlapping (channels 12 and 13 are allowed under low powered conditions, but for most cases are not used). For best results, it is highly recommended to keep the 2.4 GHz channels to 1, 6, and 11, as these channel settings will allow for virtually no overlap in the WiFi signal. Shown below is a channel graph from WiFi Scanner showing three access points configured for channels 1, 6, and 11. As you can see, the center of each signal is at 1, 6, and 11 with the actual signal extending over several channels to the left and right.

QUESTION 564

What is the MAC address used with VRRP as a virtual address?

- A. 00-00-0C-07-AD-89
- B. 00-00-5E-00-01-0a
- C. 00-07-C0-70-AB-01
- D. 00-C6-41-93-90-91

Correct Answer: B

QUESTION 576

Refer to the exhibit.

```
Switch2# show lldp
Global LLDP Information
  Status: ACTIVE
  LLDP advertisements are sent every 30 seconds
  LLDP hold time advertised is 120 seconds
  LLDP interface reinitialization delay is 2 seconds
```

A network engineer must update the configuration on Switch2 so that it sends LLDP packets every minute and the information sent via LLDP is refreshed every 3 minutes. Which configuration must the engineer apply?

- A. **Switch2(config)#lldp timer 60**
Switch2(config)#lldp holdtime 180
- B. **Switch2(config)#lldp timer 60**
Switch2(config)#lldp tlv-select 180
- C. **Switch2(config)#lldp timer 1**
Switch2(config)#lldp holdtime 3
- D. **Switch2(config)#lldp timer 1**
Switch2(config)#lldp tlv-select 3

QUESTION 581

- (DRAG DROP)

Drag and drop the Rapid PVST+ forwarding slate actions from the left to the right. Not all actions are used.

BPDUs received are forwarded to the system module.	action
BPDUs received from the system module are processed and transmitted.	action
Frames received from the attached segment are discarded.	action
Frames received from the attached segment are processed.	action
Switched frames received from other ports are advanced.	
The port in the forwarding state responds to network management messages.	action

Answer:

A.

BPDUs received are forwarded to the system module.
BPDUs received from the system module are processed and transmitted.
Frames received from the attached segment are discarded.
The port in the forwarding state responds to network management messages.

QUESTION 590

- (DRAG DROP)

Drag and drop the IPv6 addresses from the left onto the corresponding address types on the right.

Answer:

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 591

Refer to the exhibit.

```
R1#show run
!
router ospf 1
auto-cost reference-bandwidth 100000
!
interface GigabitEthernet0/0
bandwidth 10000000
!
interface GigabitEthernet0/1
bandwidth 100000000
!
interface GigabitEthernet0/2
ip ospf cost 100
!
interface GigabitEthernet0/3
ip ospf cost 1000
end
```

Router R1 resides in OSPF Area 0. After updating the R1 configuration to influence the paths that it will use to direct traffic, an engineer verified that each of the four Gigabit interfaces has the same route to 10.10.0.0/16.

Which interface will R1 choose to send traffic to reach the route?

- A. GigabitEthernet0/0
- B. GigabitEthernet0/1
- C. GigabitEthernet0/2
- D. GigabitEthernet0/3

Correct Answer: B

Section: (none)

Explanation

QUESTION 601

Refer to the exhibit.

The image shows a screenshot of a Cisco Wireless Controller configuration interface. The configuration is as follows:

- Protected Management Frame:** PMF is set to **Disabled**.
- WPA+WPA2 Parameters:**
 - WPA Policy:** Enabled (checkbox checked).
 - WPA2 Policy:** Enabled (checkbox checked).
 - WPA2 Encryption:** AES is selected, while TKIP, CCMP256, GCMP128, and GCMP256 are disabled.
 - OSEN Policy:** Enabled (checkbox checked).
- Authentication Key Management:**
 - 802.1X:** Enabled.
 - CCKM:** Enabled.
 - PSK:** Enabled (checkbox checked).
 - FT 802.1X:** Enabled.
 - FT PSK:** Enabled (checkbox checked).

Users need to connect to the wireless network with IEEE 802.11r-compatible devices. The connection must be maintained as users travel between floors or to other areas in the building. What must be the configuration of the connection?

- A. Select the WPA Policy option with the CCKM option.
- B. Disable AES encryption.
- C. Enable Fast Transition and select the FT 802.1x option.
- D. Enable Fast Transition and select the FT PSK option.

QUESTION 638

- (SIMULATION)

Configure IPv4 and IPv6 connectivity between two routers. For IPv4, use a /28 network from the 192.168.1.0/24 private range. For IPv6, use the first /64 subnet from the 2001:0db8:aaaa::/48 subnet.

1. Using Ethernet0/1 on routers R1 and R2, configure the next usable/28 from the 192.168.1.0/24 range. The network 192.168.1.0/28 is unavailable.
2. For the IPv4 /28 subnet, router R1 must be configured with the first usable host address.
3. For the IPv4 /28 subnet, router R2 must be configured with the last usable host address.
4. For the IPv6 /64 subnet, configure the routers with the IP addressing provided from the topology.
5. A ping must work between the routers on the IPv4 and IPv6 address ranges.

Guidelines Topology Tasks

Guidelines

This is a lab item in which tasks will be performed on virtual devices.

- Refer to the **Tasks** tab to view the tasks for this lab item.
- Refer to the **Topology** tab to access the device console(s) and perform the tasks.
- Console access is available for all required devices by clicking the device icon or using the tab(s) above the console window.
- All necessary preconfigurations have been applied.
- Do not change the enable password or hostname for any device.
- **Save your configurations** to NVRAM before moving to the next item.
- Click **Next** at the bottom of the screen to submit this lab and move to the next question.
- When **Next** is clicked, the lab closes and cannot be reopened.

QUESTION 639

- (SIMULATION)

Physical connectivity is implemented between the two Layer 2 switches, and the network connectivity between them must be configured

1. Configure an LACP EtherChannel and number it as 1; configure it between switches SW1 and SVV2 using interfaces Ethernet0/0 and Ethernet0/1 on both sides. The LACP mode must match on both ends
2. Configure the EtherChannel as a trunk link.
3. Configure the trunk link with 802.1 q tags.
4. Configure the native VLAN of the EtherChannel as VLAN 15.

A. ANSWER: See Explanation for Details

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

On SW1:

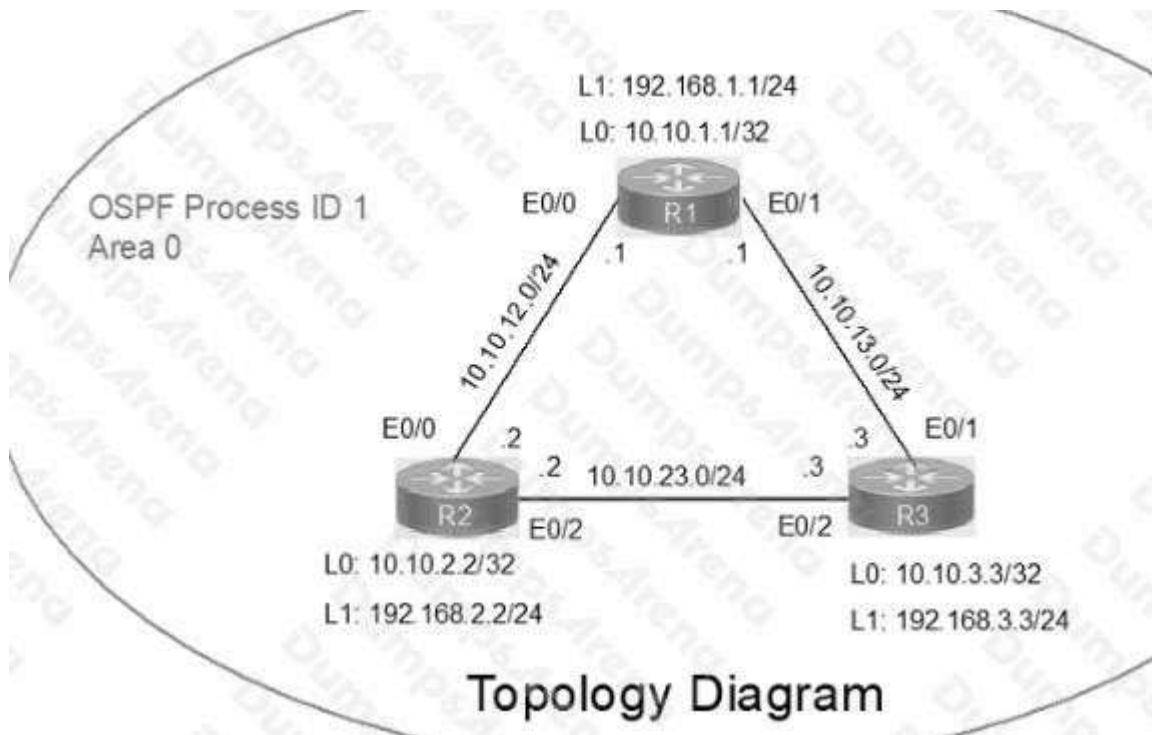

```
conf terminal vlan 15
exit
interface range eth0/0 - 1 channel-group 1 mode active exit
interface port-channel 1
switchport trunk encapsulation dot1q switchport mode trunk
switchport trunk native vlan 15 end
copy run start
```

on SW2:

```
conf terminal vlan 15
exit
interface range eth0/0 - 1 channel-group 1 mode active exit
interface port-channel 1
switchport trunk encapsulation dot1q switchport mode trunk
switchport trunk native vlan 15 end
copy run start
```

QUESTION 640

- (SIMULATION)

Guidelines

This is a lab item in which tasks will be performed on virtual devices.

- Refer to the **Tasks** tab to view the tasks for this lab item.
- Refer to the **Topology** tab to access the device console(s) and perform the tasks.
- Console access is available for all required devices by clicking the device icon or using the tab(s) above the console window.
- All necessary preconfigurations have been applied.
- Do not change the enable password or hostname for any device.
- Save your configurations** to NVRAM before moving to the next item.
- Click **Next** at the bottom of the screen to submit this lab and move to the next question.
- When **Next** is clicked, the lab closes and cannot be reopened.

IP connectivity between the three routers is configured. OSPF adjacencies must be established.

- Configure R1 and R2 Router IDs using the interface IP addresses from the link that is shared between them.
- Configure the R2 links with a max value facing R1 and R3. R2 must become the DR. R1 and R3 links facing R2 must remain with the default OSPF configuration for DR election. Verify the configuration after clearing the OSPF process.

3. Using a host wildcard mask, configure all three routers to advertise their respective Loopback1 networks.

4. Configure the link between R1 and R3 to disable their ability to add other OSPF routers.

QUESTION 641

- (SIMULATION)

Guidelines

This is a lab item in which tasks will be performed on virtual devices

- Refer to the **Tasks** tab to view the tasks for this lab item.
- Refer to the **Topology** tab to access the device console(s) and perform the tasks
- Console access is available for all required devices by clicking the device icon or using the tab(s) above the console window.
- All necessary preconfigurations have been applied.
- Do not change the enable password or hostname for any device.
- Save your configurations** to NVRAM before moving to the next item
- Click **Next** at the bottom of the screen to submit this lab and move to the next question.
- When **Next** is clicked, the lab closes and cannot be reopened.

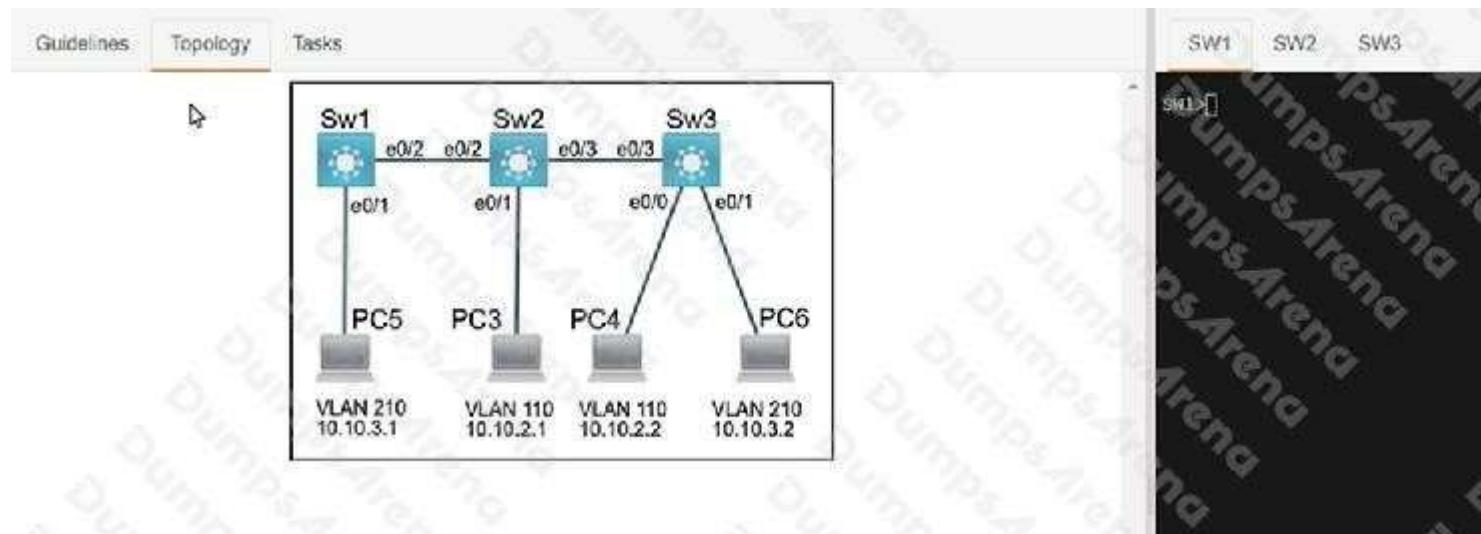

Three switches must be configured for Layer 2 connectivity. The company requires only the designated VLANs to be configured on their respective switches and permitted across any links between switches for security purposes. Do not modify or delete VTP configurations.

The network needs two user-defined VLANs configured:

VLAN 110: MARKETING

VLAN 210: FINANCE

- Configure the VLANs on the designated switches and assign them as access ports to the interfaces connected to the PCs.
- Configure the e0/2 interfaces on Sw1 and Sw2 as 802.1q trunks with only the required VLANs permitted.
- Configure the e0/3 interfaces on Sw2 and Sw3 as 802.1q trunks with only the required VLANs permitted.

A. ANSWER: See Explanation for Details

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Sw1 enable config t Vlan 210

Name FINANCE

Int e0/1

Switchport access vlan 210 do wr

QUESTION 642

- (SIMULATION)

Connectivity between four routers has been established. IP connectivity must be configured in the order presented to complete the implementation. No dynamic routing protocols are included.

1. Configure static routing using host routes to establish connectivity from router R3 to the router R1 Loopback address using the source IP of 209.165.200.230.
2. Configure an IPv4 default route on router R2 destined for router R4.
3. Configure an IPv6 default router on router R2 destined for router R4.

Guidelines

Topology

Tasks

Guidelines

This is a lab item in which tasks will be performed on virtual devices.

- Refer to the **Tasks** tab to view the tasks for this lab item.
- Refer to the **Topology** tab to access the device console(s) and perform the tasks.
- Console access is available for all required devices by clicking the device icon or using the tab(s) above the console window.
- All necessary preconfigurations have been applied.
- Do not change the enable password or hostname for any device.
- **Save your configurations** to NVRAM before moving to the next item.
- Click **Next** at the bottom of the screen to submit this lab and move to the next question.
- When **Next** is clicked, the lab closes and cannot be reopened.

A. ANSWER: See Explanation for Details

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

1.- on R3

config terminal

ip route 192.168.1.1 255.255.255.255 209.165.200.229

end

copy running start

2.- on R2

config terminal

```
ip route 0.0.0.0 0.0.0.0 209.165.202.130
```

```
end
```

```
copy running start
```

```
3.- on R2
```

```
config terminal
```

```
ipv6 route ::/0 2001:db8:abcd::2 end
```

```
copy running start
```

QUESTION 643

- (SIMULATION)

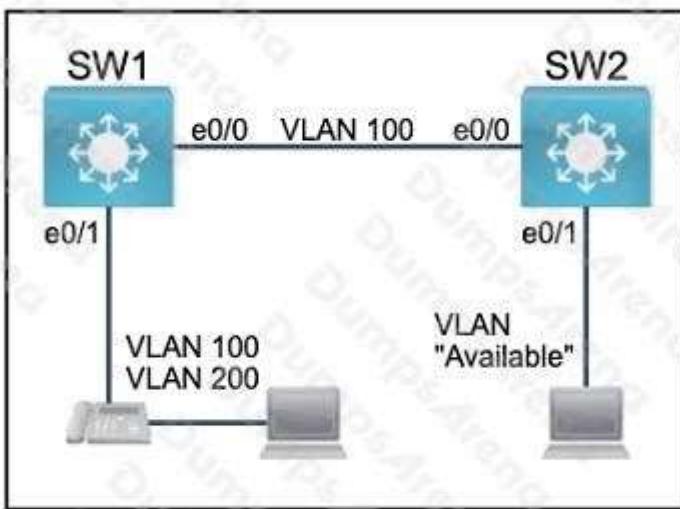

Guidelines

This is a lab item in which tasks will be performed on virtual devices.

- Refer to the **Tasks** tab to view the tasks for this lab item
- Refer to the **Topology** tab to access the device console(s) and perform the tasks.
- Console access is available for all required devices by clicking the device icon or using the tab(s) above the console window.
- All necessary preconfigurations have been applied.
- Do not change the enable password or hostname for any device.
- **Save your configurations** to NVRAM before moving to the next item.
- Click **Next** at the bottom of the screen to submit this lab and move to the next question
- When **Next** is clicked, the lab closes and cannot be reopened.

All physical cabling between the two switches is installed. Configure the network connectivity between the switches using the designated VLANs and interfaces.

1. Configure VLAN 100 named Compute and VLAN 200 named Telephony where required for each task.
2. Configure Ethernet0/1 on SW2 to use the existing VLAN named Available.
3. Configure the connection between the switches using access ports.
4. Configure Ethernet0/1 on SW1 using data and voice VLANs.
5. Configure Ethernet0/1 on SW2 so that the Cisco proprietary neighbor discovery protocol is turned off for the designated interface only.

A. ANSWER: See Explanation for Details

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

```

on sw1 enable conf t
vlan 100
name Compute
vlan 200
name Telephony
int e0/1
switchport voice
vlan 200
switchport access
vlan 100
int e0/0
switchport mode access
do wr

on sw2
Vlan 99
Name Available
Int e0/1
Switchport access
vlan 99
do wr

```

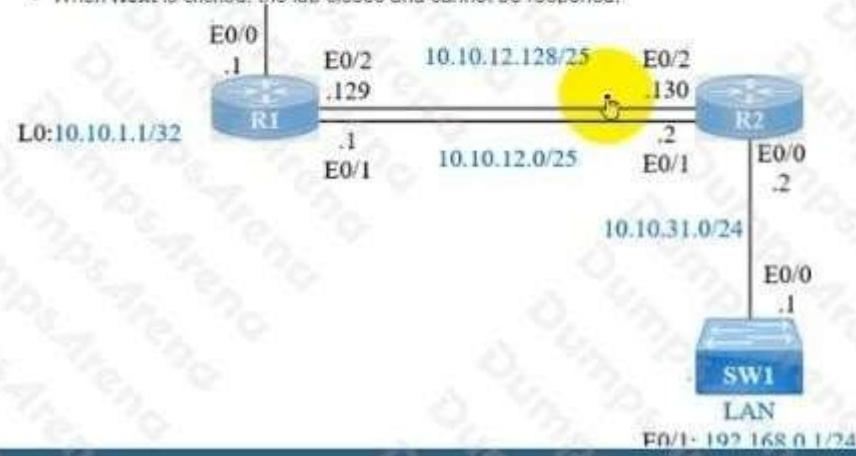

QUESTION 644

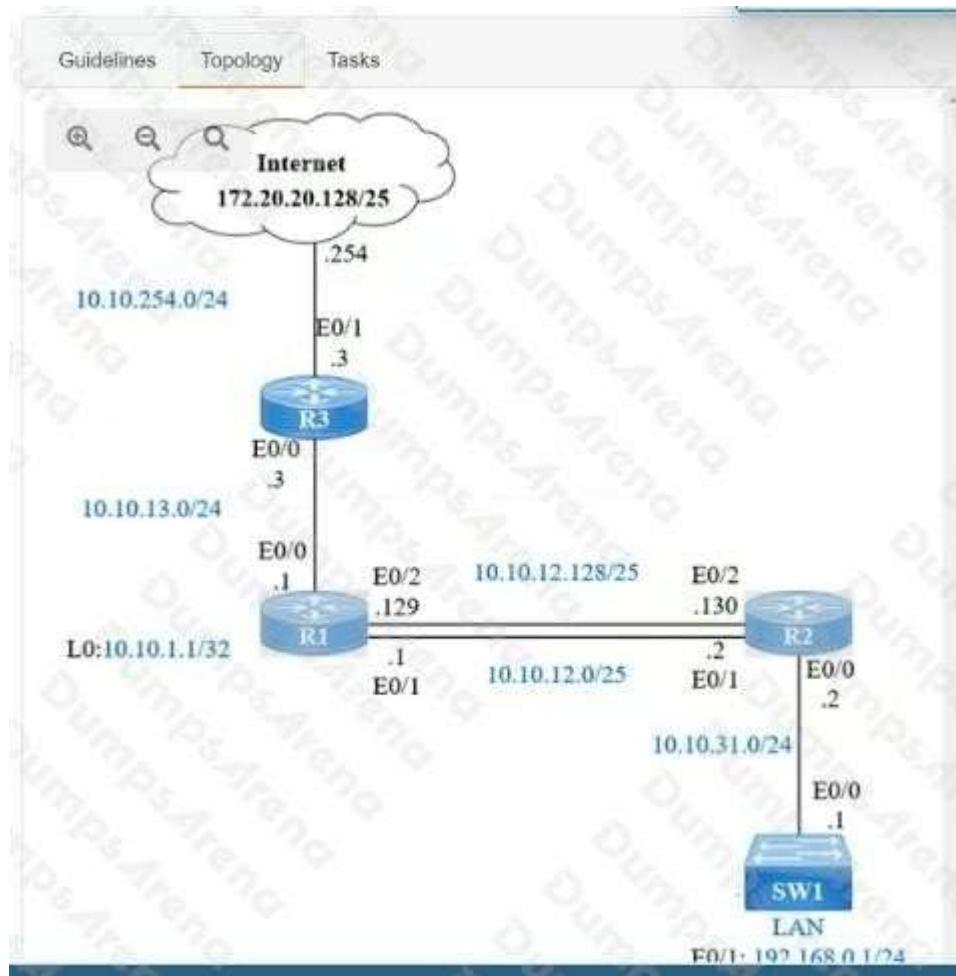

- (SIMULATION)

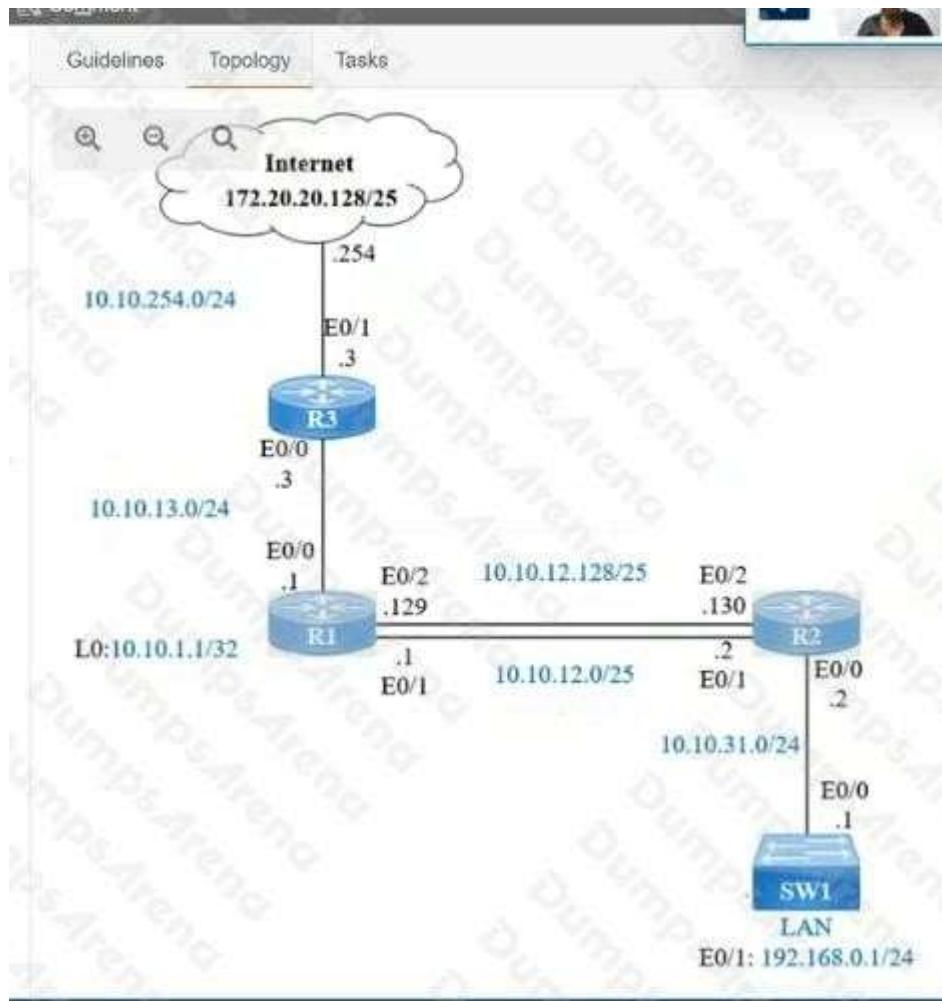

Guidelines

This is a lab item in which tasks will be performed on virtual devices.

- Refer to the **Tasks** tab to view the tasks for this lab item.
- Refer to the **Topology** tab to access the device console(s) and perform the tasks.
- Console access is available for all required devices by clicking the device icon or using the tab(s) above the console window.
- All necessary preconfigurations have been applied.
- Do not change the enable password or hostname for any device.
- **Save your configurations** to NVRAM before moving to the next item.
- Click **Next** at the bottom of the screen to submit this lab and move to the next question.
- When **Next** is clicked, the lab closes and cannot be reopened.

IP connectivity and OSPF are preconfigured on all devices where necessary. Do not make any changes to the IP addressing or OSPF. The company policy uses connected interfaces and next hops when configuring static routes except for load balancing or redundancy without floating static. Connectivity must be established between subnet 172.20.20.128/25 on the Internet and the LAN at 192.168.0.0/24 connected to SW1:

1. Configure reachability to the switch SW1 LAN subnet in router R2.
 2. Configure default reachability to the Internet subnet in router R1.
 3. Configure a single static route in router R2 to reach to the Internet subnet considering both redundant links between routers R1 and R2. A default route is NOT allowed in router R2.
 4. Configure a static route in router R1 toward the switch SW1 LAN subnet where the primary link must be through Ethernet0/1, and the backup link must be through Ethernet0/2 using a floating route. Use the minimal administrative distance value when required.

A. ANSWER: See Explanation for Details

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

On R2:

Enable Conf t

Ip route 192.168.1.0 255.255.255.0 10.10.31.1

On R1:

Enable Conf t

Ip route 0.0.0.0 0.0.0.0 10.10.13.3

On R2

Ip route 172.20.20.128 255.255.255.128 e0/2

Ip route 172.20.20.128 255.255.255.128 e0/1

On R1

Ip route 192.168.0.0 255.255.255.0 e0/1

Ip route 192.168.0.0 255.255.255.0 10.10.12.2 3

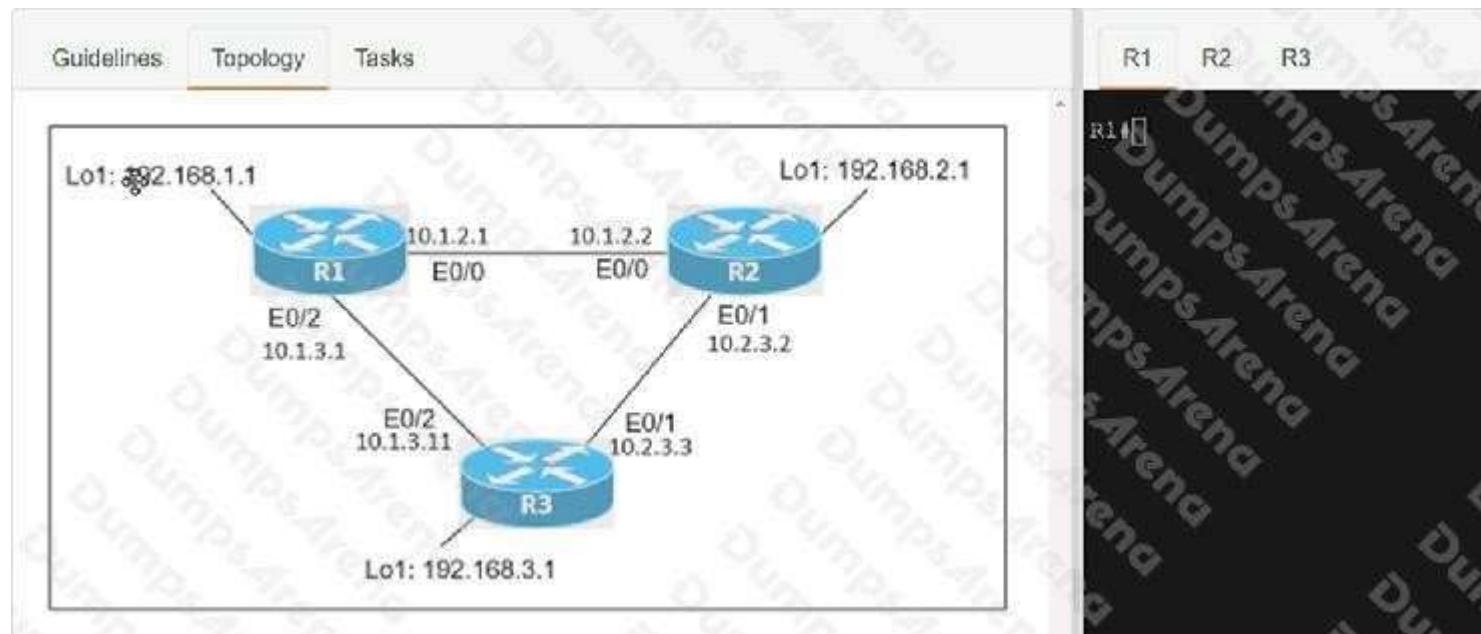

Save all configurations after every router from anyone of these command Do wr

Or

Copy run start

QUESTION 645

- (SIMULATION)

Guidelines Topology Tasks

Guidelines

This is a lab item in which tasks will be performed on virtual devices.

- Refer to the **Tasks** tab to view the tasks for this lab item.
- Refer to the **Topology** tab to access the device console(s) and perform the tasks.
- Console access is available for all required devices by clicking the device icon or using the tab(s) above the console window.
- All necessary preconfigurations have been applied.
- Do not change the enable password or hostname for any device.
- **Save your configurations** to NVRAM before moving to the next item.
- Click **Next** at the bottom of the screen to submit this lab and move to the next question.
- When **Next** is clicked, the lab closes and cannot be reopened.

Connectivity between three routers has been established, and IP services must be configured in the order presented to complete the implementation. Tasks assigned include configuration of NAT, NTP, DHCP, and SSH services.

1. All traffic sent from R3 to the R1 Loopback address must be configured for NAT on R2. All source addresses must be translated from R3 to the IP address of Ethernet0/0 on R2, while using only a standard access list named NAT. To verify, a ping must be successful to the R1 Loopback address sourced from R3. Do not use NVI NAT configuration.

2. Configure R1 as an NTP server and R2 as a client, not as a peer, using the IP address of the R1 Ethernet0/2 interface.

Set the clock on the NTP server for midnight on January 1, 2019.

3. Configure R1 as a DHCP server for the network 10.1.3.0/24 in a pool named TEST. Using a single command, exclude addresses 1-10 from the range. Interface Ethernet0/2 on R3 must be issued the IP address of 10.1.3.11 via DHCP.

4. Configure SSH connectivity from R1 to R3, while excluding access via other remote connection protocols. Access for user root and password Cisco must be set on router R3 using RSA and 1024 bits. Verify connectivity using an SSH session from router R1 using a destination address of 10.1.3.11. Do NOT modify console access or line numbers to accomplish this task.

A. ANSWER: See Explanation for Details

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

conf t

```
R1(config)#ntp master 1
R2(config)#ntp server 10.1.2.1 Exit
Router#clock set 00:00:00 jan 1 2019 ip dhcp pool TEST
network 10.1.3.0 255.255.255.0
ip dhcp excluded-address 10.1.3.1 10.1.3.10 R3(config)#int e0/3
```

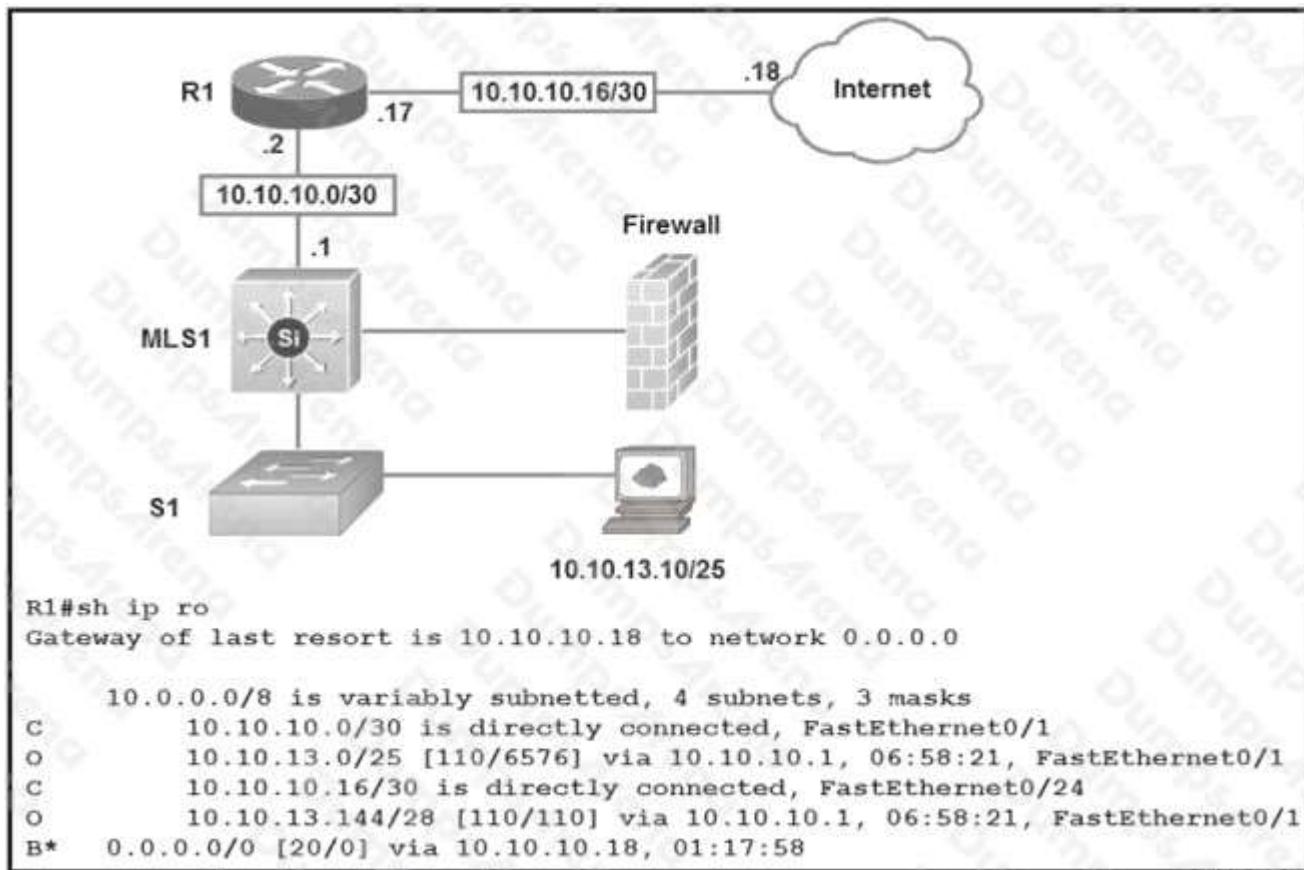

```
R3(config)#int e0/2 ip address dhcp
```

```
no shut
```

```
crypto key generate RSA 1024
```

```
Copy run start
```

QUESTION 646

Refer to the exhibit. Which type of route does R1 use to reach host 10.10.13.10/32?

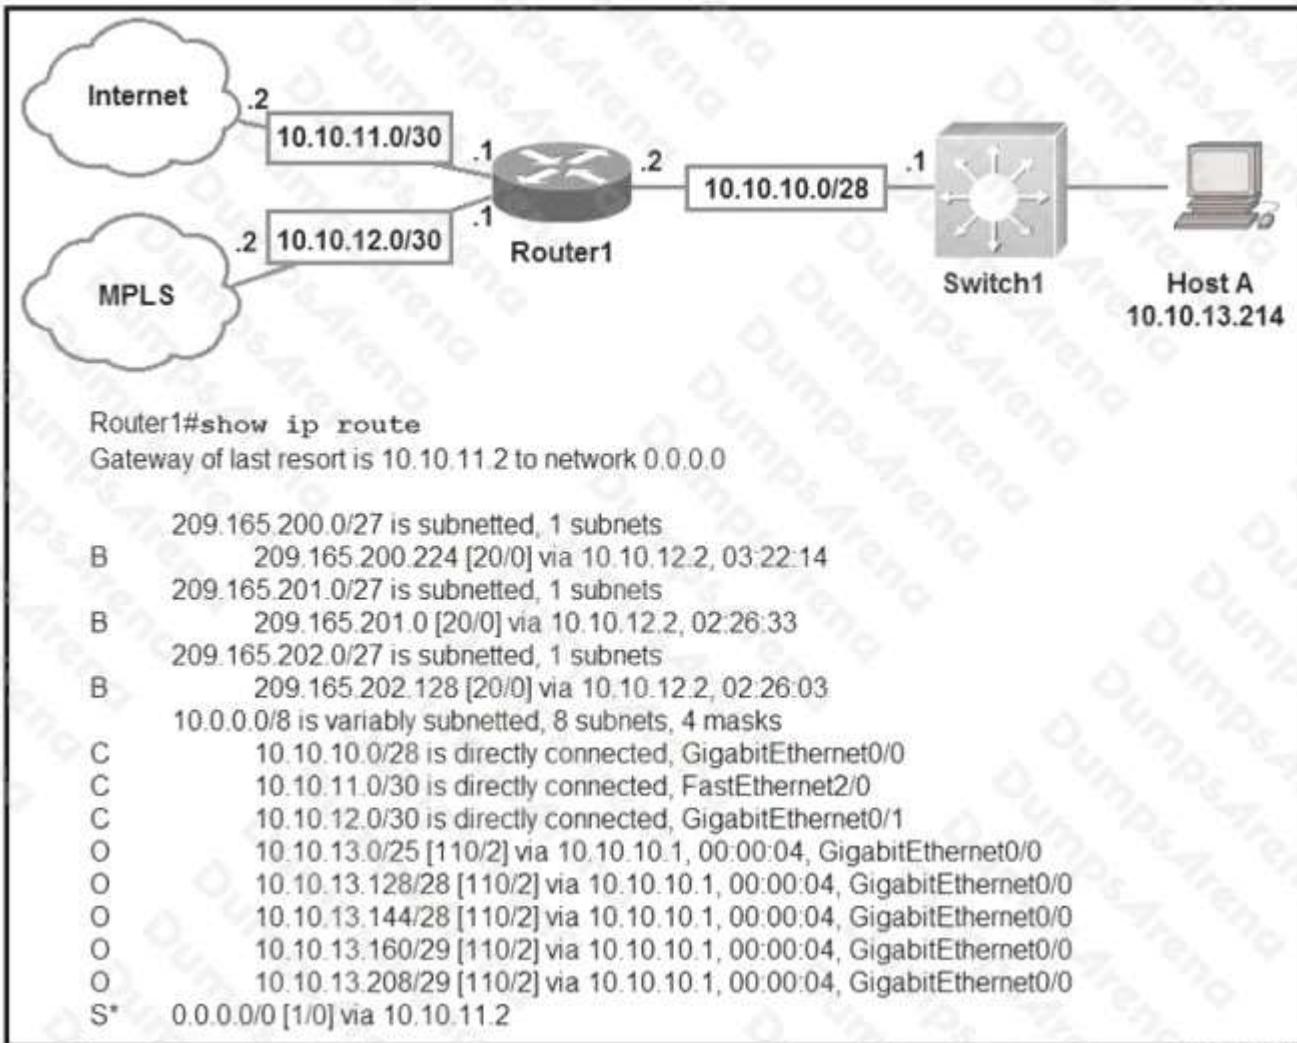

- A. default route
- B. network route
- C. host route
- D. floating static route

Correct Answer: B

Section: (none)
Explanation

Explanation/Reference:

QUESTION 647

Refer to the exhibit. Which prefix does Router1 use for traffic to Host A?

- A. 10.10.10.0/28
- B. 10.10.13.0/25
- C. 10.10.13.144/28
- D. 10.10.13.208/29

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

The prefix with "longest prefix" will be matched first, in this case is "/29".

QUESTION 648
DRAG DROP

Drag and drop the descriptions of file-transfer protocols from the left onto the correct protocols on the right.

Select and Place:

Answer Area

provides reliability when loading an IOS image upon boot up

does not require user authentication

uses port 69

uses ports 20 and 21

uses TCP

uses UDP

FTP

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 649

A frame that enters a switch fails the Frame Check Sequence. Which two interface counters are incremented? (Choose two.)

- A. input errors
- B. frame
- C. giants
- D. CRC
- E. runts

Correct Answer: AD

Section: (none)

Explanation

Explanation/Reference:

Whenever the physical transmission has problems, the receiving device might receive a frame whose bits have changed values. These frames do not pass the error detection logic as implemented in the FCS field in the Ethernet trailer. The receiving device discards the frame and counts it as some kind of input error. Cisco

switches list this error as a CRC error. Cyclic redundancy check (CRC) is a term related to how the FCS math detects an error.

The "input errors" includes runts, giants, no buffer, CRC, frame, overrun, and ignored counts.

The output below show the interface counters with the "show interface s0/0/0" command:

```
66 Router#show interface s0/0/0
Serial0/0/0 is up, line protocol is up
  Hardware is M4T
  Description: Link to R2
  Internet address is 10.1.1.1/30
  MTU 1500 bytes, BW 1544 Kbit, DLY 20000 usec,
    reliability 255/255, txload 1/255, rxload 1/255
--output omitted--
  5 minute output rate 0 bits/sec, 0 packets/sec
    268 packets input, 24889 bytes, 0 no buffer
    Received 0 broadcasts, 0 runts, 0 giants, 0 throttles
    0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored, 0 abort
    251 packets output, 23498 bytes, 0 underruns
    0 output errors, 0 collisions, 0 interface resets
    0 output buffer failures, 0 output buffers swapped out
    0 carrier transitions      DCD=up  DSR=up  DTR=up  RTS=up  CTS=up
```

QUESTION 650

DRAG DROP

Drag and drop the IPv4 network subnets from the left onto the correct usable host ranges on the right.

Select and Place:

Answer Area

172.28.228.144/18
172.28.228.144/21
172.28.228.144/23
172.28.228.144/25
172.28.228.144/29

172.28.228.1 - 172.28.229.254
172.28.224.1 - 172.28.231.254
172.28.228.129 - 172.28.228.254
172.28.228.145 - 172.28.228.150
172.28.192.1 - 172.28.255.254

Answer:

A.

Answer Area

172.28.228.144/18	172.28.228.144/23
172.28.228.144/21	172.28.228.144/21
172.28.228.144/23	172.28.228.144/25
172.28.228.144/25	172.28.228.144/29
172.28.228.144/29	172.28.228.144/18

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

This subnet question requires us to grasp how to subnet very well. To quickly find out the subnet range, we have to find out the increment and the network address of each subnet. Let's take an example with the subnet 172.28.228.144/18:

From the /18 (= 1100 0000 in the 3rd octet), we find out the increment is 64. Therefore the network address of this subnet must be the greatest multiple of the increment but not greater than the value in the 3rd octet (228). We can find out the 3rd octet of the network address is 192 (because $192 = 64 * 3$ and $192 < 228$) -> The network address is 172.28.192.0. So the first usable host should be 172.28.192.1 and it matches with the 5th answer on the right. In this case we don't need to calculate the broadcast address because we found the correct answer.

Let's take another example with subnet 172.28.228.144/23 -> The increment is 2 (as /23 = 1111 1110 in 3rd octet) -> The 3rd octet of the network address is 228 (because 228 is the multiply of 2 and equal to the 3rd octet) -> The network address is 172.28.228.0 -> The first usable host is 172.28.228.1. It is not necessary but if we want to find out the broadcast address of this subnet, we can find out the next network address, which is 172.28.(228 + the increment number).0 or 172.28.230.0 then reduce 1 bit -> 172.28.229.255 is the broadcast address of our subnet. Therefore the last usable host is 172.28.229.254.

QUESTION 651

How do TCP and UDP differ in the way that they establish a connection between two endpoints?

- A. TCP uses the three-way handshake, and UDP does not guarantee message delivery.
- B. TCP uses synchronization packets, and UDP uses acknowledgment packets.
- C. UDP provides reliable message transfer, and TCP is a connectionless protocol.
- D. UDP uses SYN, SYN ACK, and FIN bits in the frame header while TCP uses SYN, SYN ACK, and ACK bits.

Correct Answer: A

Section: (none)**Explanation****Explanation/Reference:****QUESTION 652**

Which 802.11 frame type is Association Response?

- A. management
- B. protected frame
- C. action
- D. control

Correct Answer: A

Section: (none)**Explanation****Explanation/Reference:**

There are three main types of 802.11 frames: the Data Frame, the Management Frame and the Control Frame. Association Response belongs to Management Frame. Association response is sent in response to an association request.

Reference: https://en.wikipedia.org/wiki/802.11_Frame_Types

QUESTION 653

In which way does a spine-and-leaf architecture allow for scalability in a network when additional access ports are required?

- A. A spine switch and a leaf switch can be added with redundant connections between them.
- B. A spine switch can be added with at least 40 GB uplinks.
- C. A leaf switch can be added with connections to every spine switch.
- D. A leaf switch can be added with a single connection to a core spine switch.

Correct Answer: C

Section: (none)**Explanation****Explanation/Reference:**

Spine-leaf architecture is typically deployed as two layers: spines (such as an aggregation layer), and leaves (such as an access layer). Spine-leaf topologies provide high-bandwidth, low-latency, nonblocking server-to-server connectivity.

Leaf (aggregation) switches are what provide devices access to the fabric (the network of spine and leaf switches) and are typically deployed at the top of the rack. Generally, devices connect to the leaf switches. Devices can include servers, Layer 4-7 services (firewalls and load balancers), and WAN or Internet routers. Leaf switches do not connect to other leaf switches. In spine-and-leaf architecture, every leaf should connect to every spine in a full mesh.

Spine (aggregation) switches are used to connect to all leaf switches and are typically deployed at the end or middle of the row. Spine switches do not connect to other spine switches.

Reference: <https://www.cisco.com/c/en/us/products/collateral/switches/nexus-9000-series-switches/guide-c07-733228.html>

QUESTION 654

What identifies the functionality of virtual machines?

- A. The hypervisor communicates on Layer 3 without the need for additional resources.
- B. Each hypervisor supports a single virtual machine and a single software switch.
- C. The hypervisor virtualizes physical components including CPU, memory, and storage.
- D. Virtualized servers run efficiently when physically connected to a switch that is separate from the hypervisor.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 655

Which command automatically generates an IPv6 address from a specified IPv6 prefix and MAC address of an interface?

- A. ipv6 address dhcp
- B. ipv6 address 2001:DB8:5:112::/64 eui-64
- C. ipv6 address autoconfig
- D. ipv6 address 2001:DB8:5:112::2/64 link-local

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

The "ipv6 address autoconfig" command causes the device to perform IPv6 stateless address auto-configuration to discover prefixes on the link and then to add the EUI-64 based addresses to the interface. Addresses are configured depending on the prefixes received in Router Advertisement (RA) messages. The device will listen for RA messages which are transmitted periodically from the router (DHCP Server). This RA message allows a host to create a global IPv6 address from:

- Its interface identifier (EUI-64 address)
- Link Prefix (obtained via RA)

Note: Global address is the combination of Link Prefix and EUI-64 address

QUESTION 656

When configuring IPv6 on an interface, which two IPv6 multicast groups are joined? (Choose two.)

- A. 2000::/3
- B. 2002::5
- C. FC00::/7
- D. FF02::1
- E. FF02::2

Correct Answer: DE

Section: (none)

Explanation

Explanation/Reference:

When an interface is configured with IPv6 address, it automatically joins the all nodes (FF02::1) and solicited-node (FF02::1:FFxx:xxxx) multicast groups. The all-node group is used to communicate with all interfaces on the local link, and the solicited-nodes multicast group is required for link-layer address resolution. Routers also

join a third multicast group, the all-routers group (FF02::2).

<https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/ipv6/configuration/xe-3s/ipv6-xe-36s-book/ip6-multicast.html>

QUESTION 657

DRAG DROP

```
[root@HostTest ~]# ip route
default via 192.168.1.193 dev eth1 proto static
192.168.1.0/26 dev eth1 proto kernel scope link src 192.168.1.200 metric 1

[root@HostTime ~]# ip addr show eth1
eth1: mtu 1500 qdisc pfifo_fast qlen 1000
    link/ether 00:0C:22:83:79:A3 brd ff:ff:ff:ff:ff:ff
        inet 192.168.1.200/26 brd 192.168.1.255 scope global eth1
            inet6 fe80::20c:29ff:fe89:79b3/64 scope link
                valid_lft forever preferred_lft forever
```

Refer to the exhibit. Drag and drop the networking parameters from the left onto the correct values on the right.

Select and Place:

Answer Area

default gateway	00:0C:22
host IP address	00:0C:22:83:79:A3
NIC MAC address	192.168.1.193
NIC vendor OUI	192.168.1.200
subnet mask	255.255.255.192

Answer:

A.

Answer Area

default gateway
host IP address
NIC MAC address
NIC vendor OUI
subnet mask

NIC vendor OUI
NIC MAC address
default gateway
host IP address
subnet mask

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

The "ip route" and "ip addr show eth1" are Linux commands.

- "ip route": display the routing table
- "ip addr show eth1": get depth information (only on eth1 interface) about your network interfaces like IP Address, MAC Address information

QUESTION 658

What is the default behavior of a Layer 2 switch when a frame with an unknown destination MAC address is received?

- A. The Layer 2 switch forwards the packet and adds the destination MAC address to its MAC address table.
- B. The Layer 2 switch sends a copy of a packet to CPU for destination MAC address learning.
- C. The Layer 2 switch floods packets to all ports except the receiving port in the given VLAN.
- D. The Layer 2 switch drops the received frame.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

If the destination MAC address is not in the CAM table (unknown destination MAC address), the switch sends the frame out all other ports that are in the same VLAN as the received frame. This is called flooding. It does not flood the frame out the same port on which the frame was received.

QUESTION 659

An engineer must configure a /30 subnet between two routes. Which usable IP address and subnet mask combination meets this criteria?

- A. interface e0/0 description to XX-AXXX:XXXXXX ip address 10.2.1.3 255.255.255.252
- B. interface e0/0 description to XX-AXXX:XXXXXX ip address 192.168.1.1 255.255.255.248
- C. interface e0/0 description to XX-AXXX:XXXXXX ip address 172.16.1.4 255.255.255.248
- D. interface e0/0 description to XX-AXXX:XXXXXX ip address 209.165.201.2 225.255.255.252

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 660

Which network allows devices to communicate without the need to access the Internet?

- A. 172.9.0.0/16
- B. 172.28.0.0/16
- C. 192.0.0.0/8
- D. 209.165.201.0/24

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

This question asks about the private ranges of IPv4 addresses. The private ranges of each class of IPv4 are listed below:

Class A private IP address ranges from 10.0.0.0 to 10.255.255.255

Class B private IP address ranges from 172.16.0.0 to 172.31.255.255

Class C private IP address ranges from 192.168.0.0 to 192.168.255.255

Only the network 172.28.0.0/16 belongs to the private IP address (of class B).

QUESTION 661

```
Router(config)#interface GigabitEthernet 1/0/1
Router(config-if)#ip address 192.168.16.143 255.255.255.240
Bad mask /28 for address 192.168.16.143
```

Refer to the exhibit. Which statement explains the configuration error message that is received?

- A. It belongs to a private IP address range.
- B. The router does not support /28 mask.
- C. It is a network IP address.
- D. It is a broadcast IP address.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 662

Which IPv6 address type provides communication between subnets and cannot route on the Internet?

- A. link-local
- B. unique local
- C. multicast
- D. global unicast

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

A IPv6 Unique Local Address is an IPv6 address in the block FC00::/7. It is the approximate IPv6 counterpart of the IPv4 private address. It is not routable on the global Internet.

Note: In the past, Site-local addresses (FEC0::/10) are equivalent to private IP addresses in IPv4 but now they are deprecated.

Link-local addresses only used for communications within the local subnet. It is usually created dynamically using a link-local prefix of FE80::/10 and a 64-bit interface identifier (based on 48-bit MAC address).

QUESTION 663

Which IPv6 address block sends packets to a group address rather than a single address?

- A. 2000::/3
- B. FC00::/7
- C. FE80::/10
- D. FF00::/8

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

FF00::/8 is used for IPv6 multicast and this is the IPv6 type of address the question wants to ask.

FE80::/10 range is used for link-local addresses. Link-local addresses only used for communications within the local subnetwork (automatic address configuration, neighbor discovery, router discovery, and by many routing protocols). It is only valid on the current subnet. It is usually created dynamically using a link-local prefix of FE80::/10 and a 64-bit interface identifier (based on 48-bit MAC address).

QUESTION 664

What are two reasons that cause late collisions to increment on an Ethernet interface? (Choose two.)

- A. when Carrier Sense Multiple Access/Collision Detection is used
- B. when one side of the connection is configured for half-duplex
- C. when the sending device waits 15 seconds before sending the frame again

- D. when a collision occurs after the 32nd byte of a frame has been transmitted
- E. when the cable length limits are exceeded

Correct Answer: BE

Section: (none)

Explanation

Explanation/Reference:

A late collision is defined as any collision that occurs after the first 512 bits (or 64th byte) of the frame have been transmitted. The usual possible causes are full-duplex/half-duplex mismatch, exceeded Ethernet cable length limits, or defective hardware such as incorrect cabling, non-compliant number of hubs in the network, or a bad NIC.

Late collisions should never occur in a properly designed Ethernet network. They usually occur when Ethernet cables are too long or when there are too many repeaters in the network.

Reference: <https://www.cisco.com/en/US/docs/internetworking/troubleshooting/guide/tr1904.html>

QUESTION 665

What is a benefit of using a Cisco Wireless LAN Controller?

- A. It eliminates the need to configure each access point individually.
- B. Central AP management requires more complex configurations.
- C. Unique SSIDs cannot use the same authentication method.
- D. It supports autonomous and lightweight APs.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 666

Which action is taken by switch port enabled for PoE power classification override?

- A. If a monitored port exceeds the maximum administrative value for power, the port is shutdown and error-disabled.
- B. When a powered device begins drawing power from a PoE switch port, a syslog message is generated.
- C. As power usage on a PoE switch port is checked, data flow to the connected device is temporarily paused.
- D. If a switch determines that a device is using less than the minimum configured power, it assumes the device has failed and disconnects it.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

PoE monitoring and policing compares the power consumption on ports with the administrative maximum value (either a configured maximum value or the port's default value). If the power consumption on a monitored port exceeds the administrative maximum value, the following actions occur:

- A syslog message is issued.
- The monitored port is shut down and error-disabled.
- The allocated power is freed.

QUESTION 667

What occurs to frames during the process of frame flooding?

- A. Frames are sent to all ports, including those that are assigned to other VLANs.
- B. Frames are sent to every port on the switch that has a matching entry in MAC address table.
- C. Frames are sent to every port on the switch in the same VLAN except from the originating port.
- D. Frames are sent to every port on the switch in the same VLAN.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 668

Which function does the range of private IPv4 addresses perform?

- A. allows multiple companies to each use the same addresses without conflicts
- B. provides a direct connection for hosts from outside of the enterprise network
- C. ensures that NAT is not required to reach the Internet with private range addressing
- D. enables secure communications to the Internet for all external hosts

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 669

Which action must be taken to assign a global unicast IPv6 address on an interface that is derived from the MAC address of that interface?

- A. explicitly assign a link-local address
- B. disable the EUI-64 bit process
- C. enable SLAAC on an interface
- D. configure a stateful DHCPv6 server on the network

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 670

Several new coverage cells are required to improve the Wi-Fi network of an organization. Which two standard designs are recommended?
(Choose two.)

- A. 5GHz provides increased network capacity with up to 23 nonoverlapping channels.

- B. 5GHz channel selection requires an autonomous access point.
- C. Cells that overlap one another are configured to use nonoverlapping channels.
- D. Adjacent cells with overlapping channels use a repeater access point.
- E. For maximum throughput, the WLC is configured to dynamically set adjacent access points to the channel.

Correct Answer: CE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 671

How do TCP and UDP differ in the way they provide reliability for delivery of packets?

- A. TCP does not guarantee delivery or error checking to ensure that there is no corruption of data, UDP provides message acknowledgement and retransmits data if lost.
- B. TCP provides flow control to avoid overwhelming a receiver by sending too many packets at once, UDP sends packets to the receiver in a continuous stream without checking.
- C. TCP is a connectionless protocol that does not provide reliable delivery of data; UDP is a connection-oriented protocol that uses sequencing to provide reliable delivery.
- D. TCP uses windowing to deliver packets reliably; UDP provides reliable message transfer between hosts by establishing a three-way handshake.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 672

What are two differences between optical-fiber cabling and copper cabling? (Choose two.)

- A. A BNC connector is used for fiber connections
- B. The glass core component is encased in a cladding
- C. The data can pass through the cladding
- D. Light is transmitted through the core of the fiber
- E. Fiber connects to physical interfaces using RJ-45 connections

Correct Answer: BD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 673

How does CAPWAP communicate between an access point in local mode and a WLC?

- A. The access point must not be connected to the wired network, as it would create a loop
- B. The access point must be connected to the same switch as the WLC
- C. The access point must directly connect to the WLC using a copper cable
- D. The access point has the ability to link to any switch in the network, assuming connectivity to the WLC

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 674

Which IPv6 address block forwards packets to a multicast address rather than a unicast address?

- A. 2000::/3
- B. FC00::/7
- C. FE80::/10
- D. FF00::/12

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 675

What is the difference regarding reliability and communication type between TCP and UDP?

- A. TCP is reliable and is a connectionless protocol; UDP is not reliable and is a connection-oriented protocol.
- B. TCP is not reliable and is a connectionless protocol; UDP is reliable and is a connection-oriented protocol.
- C. TCP is not reliable and is a connection-oriented protocol; UDP is reliable and is a connectionless protocol.
- D. TCP is reliable and is a connection-oriented protocol; UDP is not reliable and is a connectionless protocol.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 676

What are two descriptions of three-tier network topologies? (Choose two.)

- A. The distribution layer runs Layer 2 and Layer 3 technologies
- B. The network core is designed to maintain continuous connectivity when devices fail
- C. The access layer manages routing between devices in different domains
- D. The core layer maintains wired connections for each host
- E. The core and distribution layers perform the same functions

Correct Answer: AB

Section: (none)

Explanation

Explanation/Reference:

QUESTION 677

Which type of IPv6 address is publicly routable in the same way as IPv4 public addresses?

- A. multicast
- B. unique local
- C. link-local
- D. global unicast

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 678

What is the expected outcome when an EUI-64 address is generated?

- A. The interface ID is configured as a random 64-bit value
- B. The characters FE80 are inserted at the beginning of the MAC address of the interface
- C. The seventh bit of the original MAC address of the interface is inverted
- D. The MAC address of the interface is used as the interface ID without modification

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 679

A corporate office uses four floors in a building.

Floor 1 has 24 users.

Floor 2 has 29 users.

Floor 3 has 28 users. Floor 4 has 22 users.

Which subnet summarizes and gives the most efficient distribution of IP addresses for the router configuration?

- A. 192.168.0.0/24 as summary and 192.168.0.0/28 for each floor
- B. 192.168.0.0/23 as summary and 192.168.0.0/25 for each floor
- C. 192.168.0.0/25 as summary and 192.168.0.0/27 for each floor
- D. 192.168.0.0/26 as summary and 192.168.0.0/29 for each floor

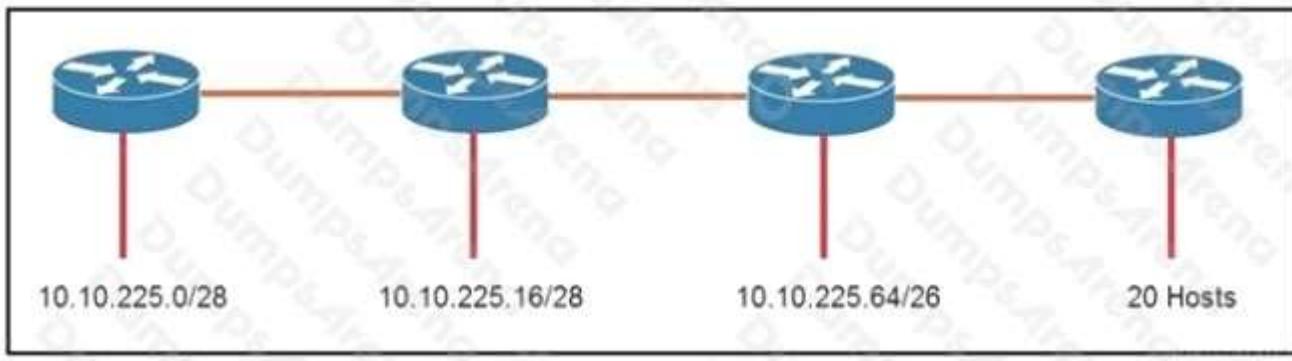

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 680

Refer to the exhibit. An engineer must add a subnet for a new office that will add 20 users to the network. Which IPv4 network and subnet mask combination does the engineer assign to minimize wasting addresses?

- A. 10.10.225.48 255.255.255.240
- B. 10.10.225.32 255.255.255.240
- C. 10.10.225.48 255.255.255.224
- D. 10.10.225.32 255.255.255.224

Correct Answer: D

Section: (none)

Explanation

QUESTION 683

DRAG DROP

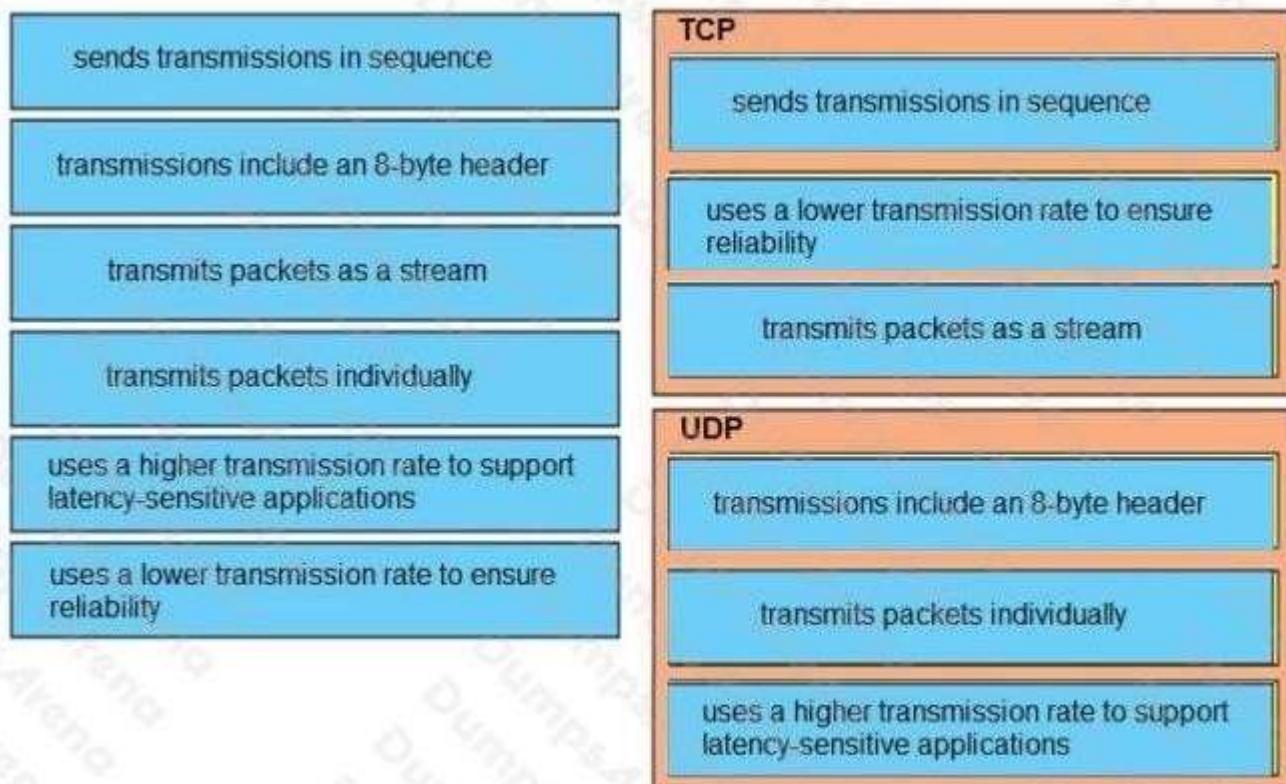

Drag and drop the descriptions of IP protocol transmissions from the left onto the IP traffic types on the right.

Select and Place:

Answer:

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 684

A device detects two stations transmitting frames at the same time. This condition occurs after the first 64 bytes of the frame is received. Which interface counter increments?

- A. runt
- B. collision
- C. late collision
- D. CRC

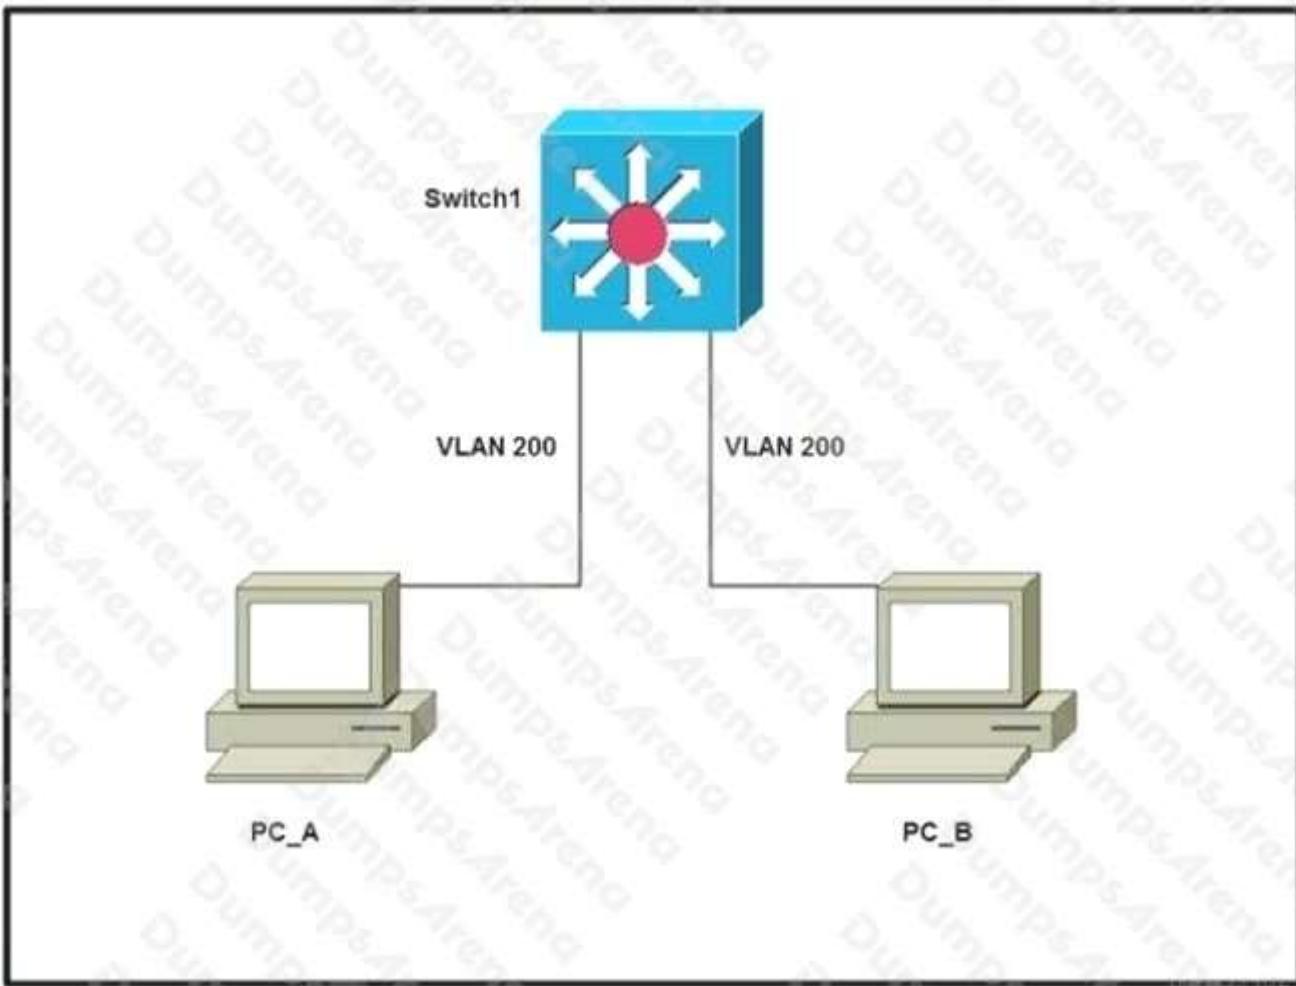

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 685

Refer to the exhibit. Which outcome is expected when PC_A sends data to PC_B after their initial communication?

- A. The source MAC address is changed.
- B. The destination MAC address is replaced with ffff.ffff.ffff.
- C. The source and destination MAC addresses remain the same.
- D. The switch rewrites the source and destination MAC addresses with its own.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 686

Using direct sequence spread spectrum, which three 2.4-GHz channels are used to limit collisions?

- A. 5, 6, 7
- B. 1, 2, 3
- C. 1, 6, 11
- D. 1, 5, 10

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 687

How do TCP and UDP differ in the way they guarantee packet delivery?

- A. TCP uses retransmissions, acknowledgment, and parity checks, and UDP uses cyclic redundancy checks only
- B. TCP uses two-dimensional parity checks, checksums, and cyclic redundancy checks, and UDP uses retransmissions only
- C. TCP uses checksum, acknowledgements, and retransmissions, and UDP uses checksums only
- D. TCP uses checksum, parity checks, and retransmissions, and UDP uses acknowledgements only

Correct Answer: C

Section: (none)

Explanation/Reference:

QUESTION 688

A wireless administrator has configured a WLAN; however, the clients need access to a less congested 5-GHz network for their voice quality. Which action must be taken to meet the requirement?

- A. enable Band Select
- B. enable DTIM
- C. enable RX-SOP
- D. enable AAA override

Correct Answer: A

Section: (none)

Explanation

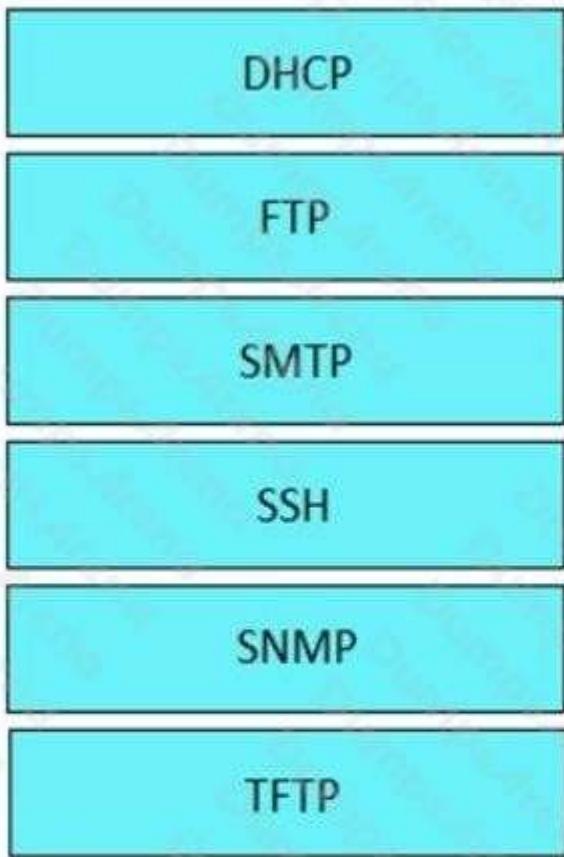

Explanation/Reference:

QUESTION 689

DRAG DROP

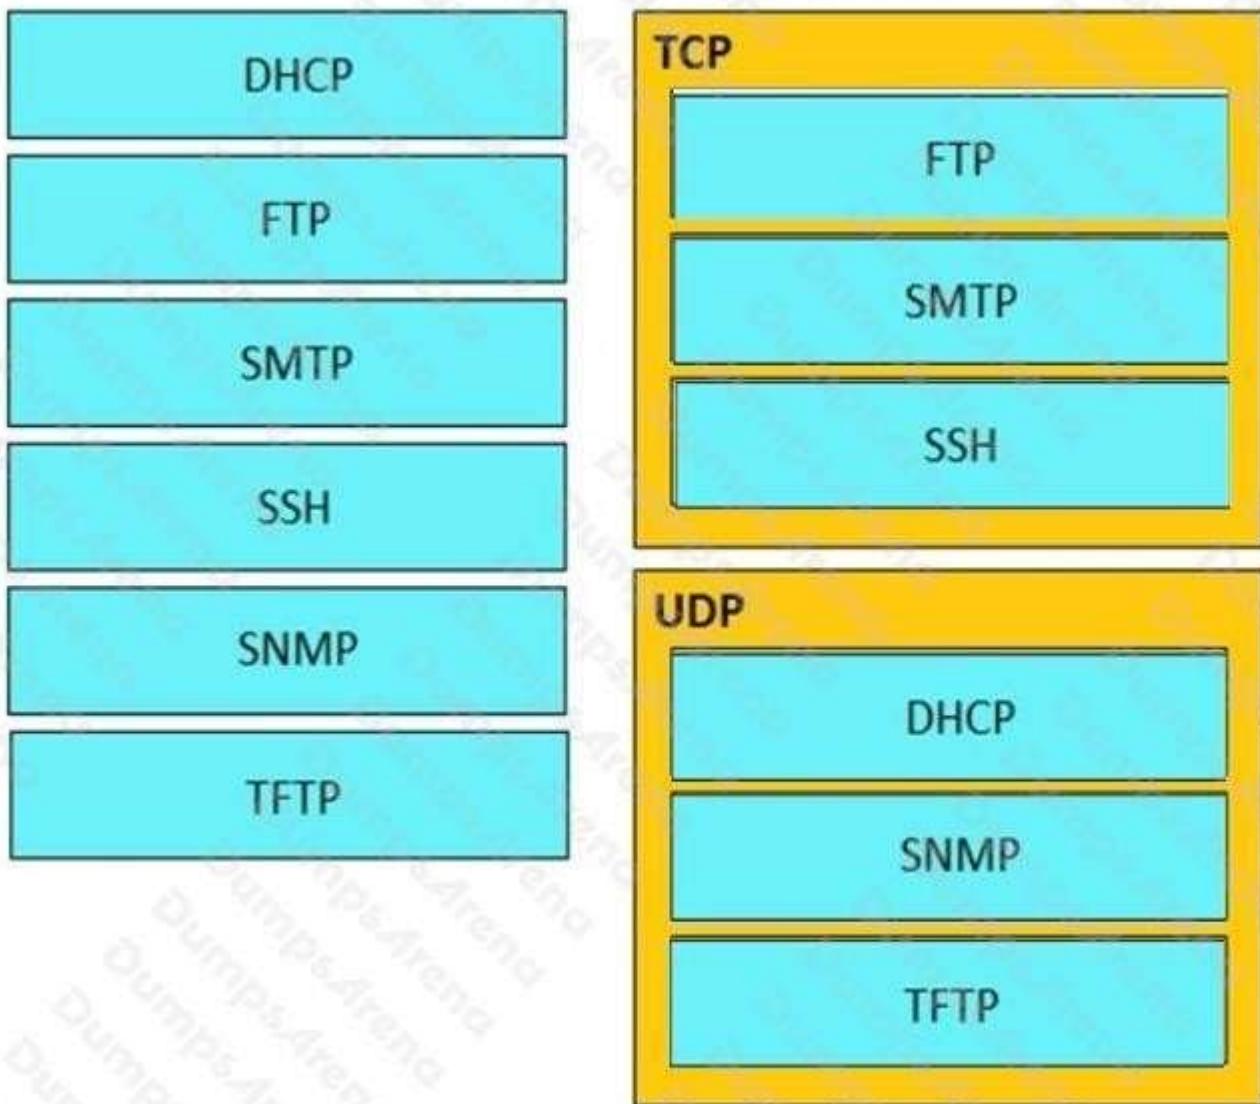

Drag and drop the application protocols from the left onto the transport protocols that is uses on the right.

Select and Place:

Answer:

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 690

What is the destination MAC address of a broadcast frame?

- A. 00:00:0c:07:ac:01
- B. ff:ff:ff:ff:ff:ff

- C. 43:2e:08:00:00:0c
- D. 00:00:0c:43:2e:08
- E. 00:00:0c:ff:ff:ff

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 691

For what two purposes does the Ethernet protocol use physical addresses?

- A. to uniquely identify devices at Layer 2
- B. to allow communication with devices on a different network
- C. to differentiate a Layer 2 frame from a Layer 3 packet
- D. to establish a priority system to determine which device gets to transmit first
- E. to allow communication between different devices on the same network
- F. to allow detection of a remote device when its physical address is unknown

Correct Answer: AE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 692

DRAG DROP

Drag and drop the networking parameters from the left on to the correct values on the right.

Select and Place:

Answer:

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

SSH uses TCP port 22 while SNMP uses UDP port 161 and 162.

QUESTION 693

Which component of an Ethernet frame is used to notify a host that traffic is coming?

- A. start of frame delimiter
- B. Type field
- C. preamble
- D. Data field

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Preamble is a 7 Byte field in the Ethernet frame which helps to receiver to know that it is an actual data (Ethernet Frame) and not some random noise in the transmission medium. It acts like a doorbell telling about the incoming data.

QUESTION 694

You are configuring your edge routers interface with a public IP address for Internet connectivity. The router needs to obtain the IP address from the service provider dynamically. Which command is needed on interface FastEthernet 0/0 to accomplish this?

- A. ip default-gateway
- B. ip route
- C. ip default-network
- D. ip address dhcp
- E. ip address dynamic

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 695

Which two statements about the purpose of the OSI model are accurate? (Choose two.)

- A. Defines the network functions that occur at each layer
- B. Facilitates an understanding of how information travels throughout a network
- C. Changes in one layer do not impact other layer
- D. Ensures reliable data delivery through its layered approach

Correct Answer: AB

Section: (none)

Explanation

Explanation/Reference:

QUESTION 696

Which three statements about MAC addresses are correct? (Choose three.)

- A. To communicate with other devices on a network, a network device must have a unique MAC address
- B. The MAC address is also referred to as the IP address
- C. The MAC address of a device must be configured in the Cisco IOS CLI by a user with administrative privileges
- D. A MAC address contains two main components, the first of which identifies the manufacturer of the hardware and the second of which uniquely identifies the hardware
- E. An example of a MAC address is 0A:26:B8:D6:65:90
- F. A MAC address contains two main components, the first of which identifies the network on which the host resides and the second of which uniquely identifies the host on the network

Correct Answer: ADE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 697

Which technique can you use to route IPv6 traffic over an IPv4 infrastructure?

- A. NAT
- B. 6 to 4 tunneling
- C. L2TPv3

- D. dual-stack

Correct Answer: B

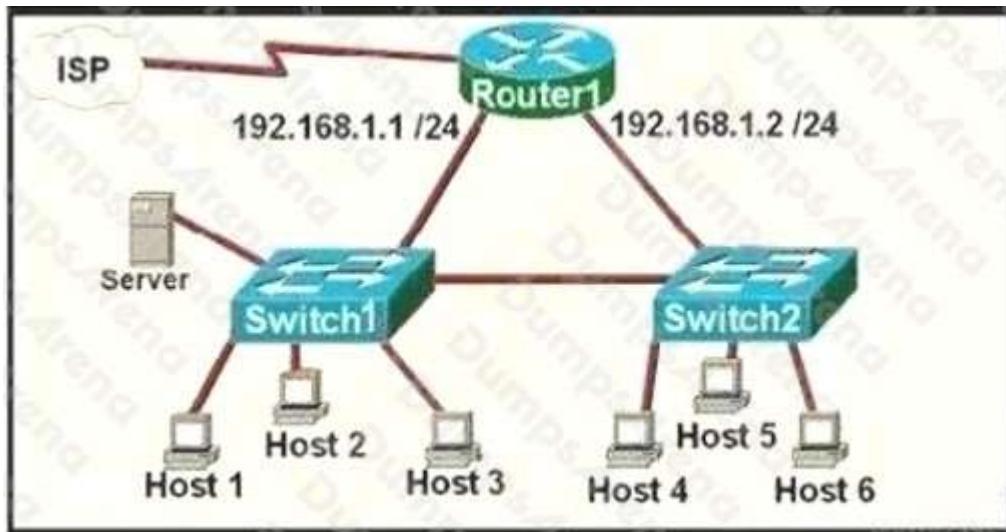

Section: (none)

Explanation

Explanation/Reference:

QUESTION 698

Refer to the exhibit. A network technician is asked to design a small network with redundancy. The exhibit represents this design, with all hosts configured in the same VLAN. What conclusions can be made about this design?

- A. This design will function as intended.
- B. Spanning-tree will need to be used.
- C. The router will not accept the addressing scheme.
- D. The connection between switches should be a trunk.
- E. The router interfaces must be encapsulated with the 802.1Q protocol.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Each interface on a router must be in a different network. If two interfaces are in the same network, the router will not accept it and show error when the administrator assigns it.

QUESTION 699

Which two statements are true about the command ip route 172.16.3.0 255.255.255.0 192.168.2.4? (Choose two.)

- A. It establishes a static route to the 172.16.3.0 network.
- B. It establishes a static route to the 192.168.2.0 network.
- C. It configures the router to send any traffic for an unknown destination to the 172.16.3.0 network.
- D. It configures the router to send any traffic for an unknown destination out the interface with the address 192.168.2.4.
- E. It uses the default administrative distance.

F. It is a route that would be used last if other routes to the same destination exist.

Correct Answer: AE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 700

What are two benefits of private IPv4 IP addresses? (Choose two.)

- A. They are routed the same as public IP addresses.
- B. They are less costly than public IP addresses.
- C. They can be assigned to devices without Internet connections.
- D. They eliminate the necessity for NAT policies.
- E. They eliminate duplicate IP conflicts.

Correct Answer: BC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 701

What are two benefits that the UDP protocol provide for application traffic? (Choose two.)

- A. UDP traffic has lower overhead than TCP traffic
- B. UDP provides a built-in recovery mechanism to retransmit lost packets
- C. The CTL field in the UDP packet header enables a three-way handshake to establish the connection
- D. UDP maintains the connection state to provide more stable connections than TCP
- E. The application can use checksums to verify the integrity of application data

Correct Answer: AE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 702

Which two goals reasons to implement private IPv4 addressing on your network? (Choose two.)

- A. Comply with PCI regulations
- B. Conserve IPv4 address
- C. Reduce the size of the forwarding table on network routers
- D. Reduce the risk of a network security breach
- E. Comply with local law

Correct Answer: BD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 703

Which WAN access technology is preferred for a small office / home office architecture?

- A. broadband cable access
- B. frame-relay packet switching
- C. dedicated point-to-point leased line
- D. Integrated Services Digital Network switching

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 704

Which two WAN architecture options help a business scalability and reliability for the network? (Choose two.)

- A. asynchronous routing
- B. single-homed branches
- C. dual-homed branches
- D. static routing
- E. dynamic routing

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 705

What is the binary pattern of unique ipv6 unique local address?

- A. 00000000
- B. 11111100
- C. 11111111
- D. 11111101

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

A IPv6 Unique Local Address is an IPv6 address in the block FC00::/7, which means that IPv6 Unique Local addresses begin with 7 bits with exact binary pattern as 1111 110 -> Answer B is correct. Note: IPv6 Unique Local Address is the approximate IPv6 counterpart of the IPv4 private address. It is not routable on the global Internet.

QUESTION 706

Which two options are the best reasons to use an IPV4 private IP space? (Choose two.)

- A. to enable intra-enterprise communication

- B. to implement NAT
- C. to connect applications
- D. to conserve global address space
- E. to manage routing overhead

Correct Answer: AD

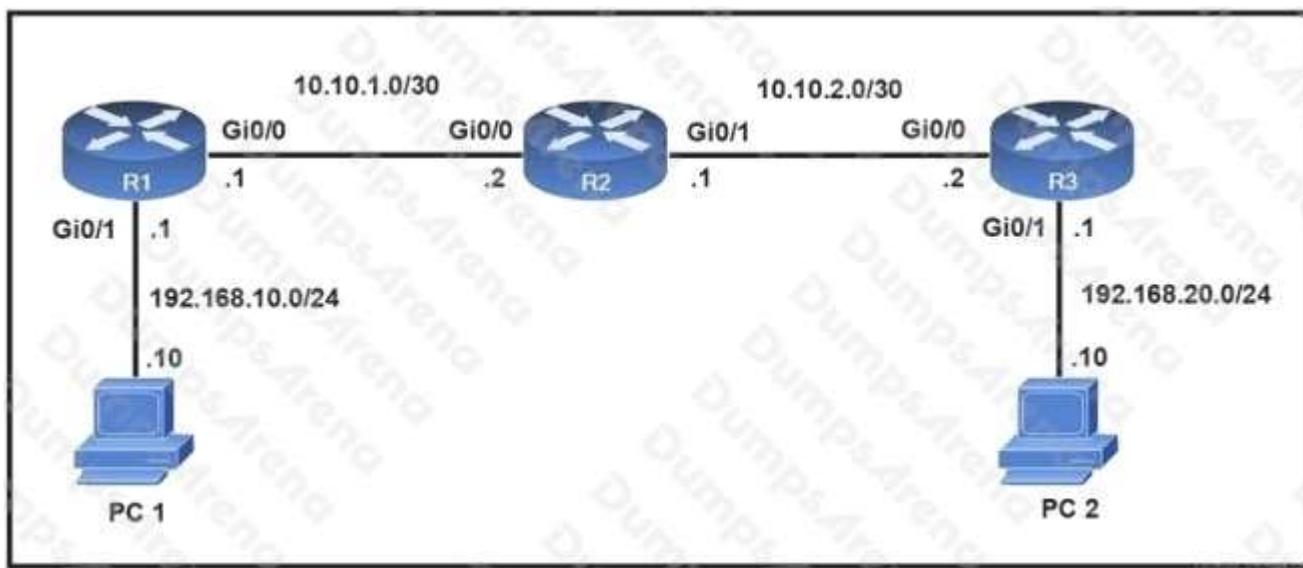

Section: (none)

Explanation

Explanation/Reference:

QUESTION 707

Refer to the exhibit. When PC1 sends a packet to PC2, the packet has which source and destination IP address when it arrives at interface Gi0/0 on router R2?

- A. source 192.168.10.10 and destination 10.10.2.2
- B. source 192.168.20.10 and destination 192.168.20.1
- C. source 192.168.10.10 and destination 192.168.20.10
- D. source 10.10.1.1 and destination 10.10.2.2

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

The source and destination IP addresses of the packets are unchanged on all the way. Only source and destination MAC addresses are changed.

QUESTION 708

What is the same for both copper and fiber interfaces when using SFP modules?

- A. They support an inline optical attenuator to enhance signal strength
- B. They accommodate single-mode and multi-mode in a single module
- C. They provide minimal interruption to services by being hot-swappable

- D. They offer reliable bandwidth up to 100 Mbps in half duplex mode

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 709

What are two functions of a server on a network? (Choose two.)

- A. handles requests from multiple workstations at the same time
- B. achieves redundancy by exclusively using virtual server clustering
- C. housed solely in a data center that is dedicated to a single client
- D. runs the same operating system in order to communicate with other servers
- E. runs applications that send and retrieve data for workstations that make requests

Correct Answer: AE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 710

Which function is performed by the collapsed core layer in a two-tier architecture?

- A. enforcing routing policies
- B. marking interesting traffic for data policies
- C. applying security policies
- D. attaching users to the edge of the network

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 711

What is the primary function of a Layer 3 device?

- A. to transmit wireless traffic between hosts
- B. to analyze traffic and drop unauthorized traffic from the Internet
- C. to forward traffic within the same broadcast domain
- D. to pass traffic between different networks

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 712

Which two functions are performed by the core layer in a three-tier architecture? (Choose two.)

- A. Provide uninterrupted forwarding service
- B. Inspect packets for malicious activity
- C. Ensure timely data transfer between layers
- D. Provide direct connectivity for end user devices
- E. Police traffic that is sent to the edge of the network

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

Reference: https://www.mcmcse.com/cisco/guides/hierarchical_model.shtml

QUESTION 713

What is a recommended approach to avoid co-channel congestion while installing access points that use the 2.4 GHz frequency?

- A. different nonoverlapping channels
- B. one overlapping channel
- C. one nonoverlapping channel
- D. different overlapping channels

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 714

A manager asks a network engineer to advise which cloud service models are used so employees do not have to waste their time installing, managing, and updating software that is only used occasionally. Which cloud service model does the engineer recommend?

- A. infrastructure-as-a-service
- B. platform-as-a-service
- C. business process as service to support different types of service
- D. software-as-a-service

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 715

What are two functions of a Layer 2 switch? (Choose two.)

- A. acts as a central point for association and authentication servers
- B. selects the best route between networks on a WAN

- C. moves packets within a VLAN
- D. moves packets between different VLANs
- E. makes forwarding decisions based on the MAC address of a packet

Correct Answer: CE

Section: (none)

Explanation

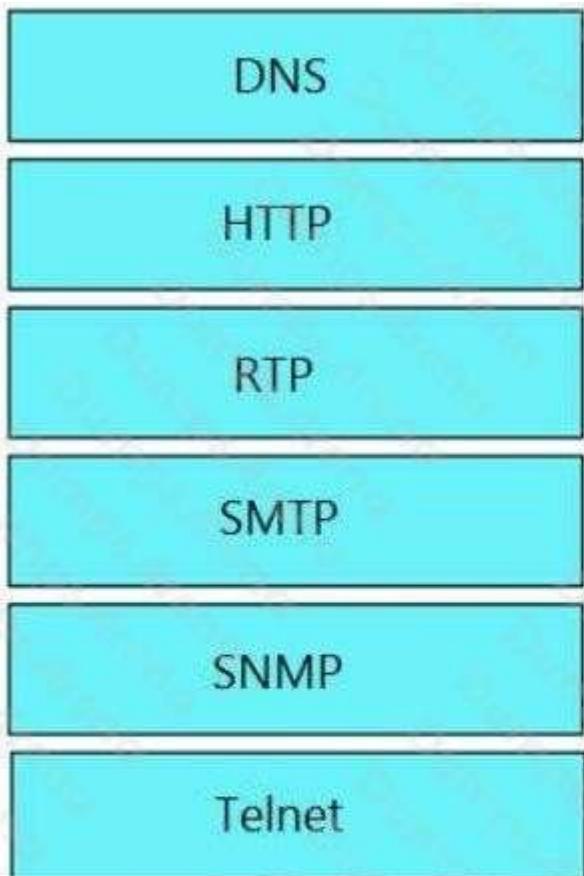

Explanation/Reference:

QUESTION 716

- (DRAG DROP)

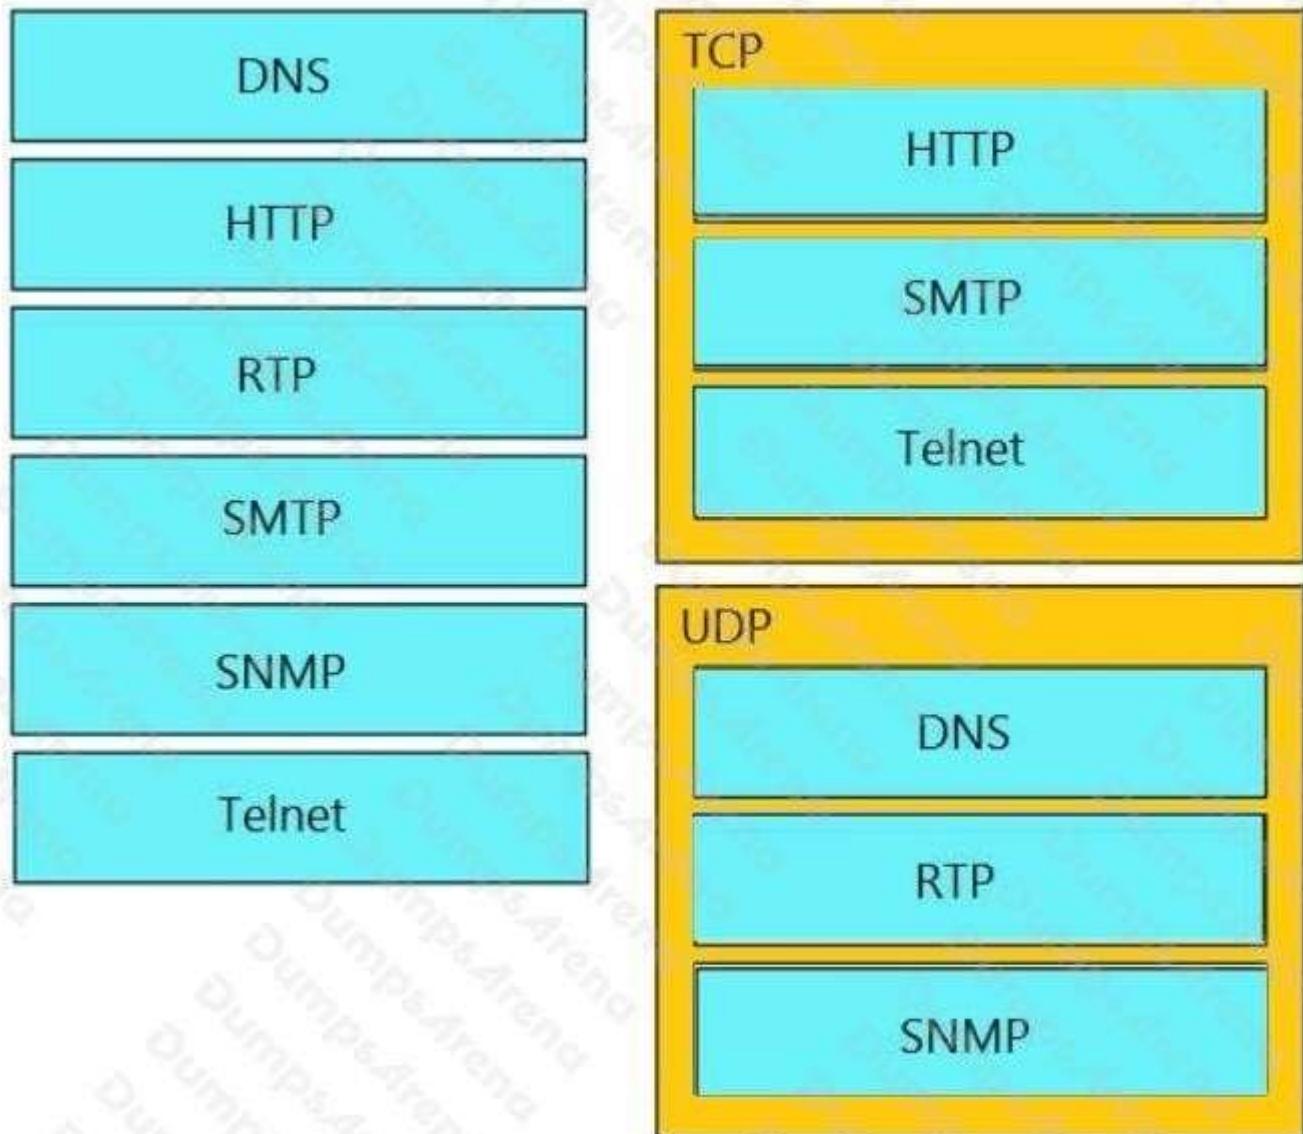

Drag and drop the TCP/IP protocols from the left onto their primary transmission protocols on the right.

Select and Place:

Answer:

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 717

An engineer observes high usage on the 2.4GHz channels and lower usage on the 5GHz channels. What must be configured to allow clients to preferentially use 5GHz access points?

- A. Client Band Select
- B. Re-Anchor Roamed Clients

- C. OEAP Spilt Tunnel
- D. 11ac MU-MIMO

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 718

Which networking function occurs on the data plane?

- A. processing inbound SSH management traffic
- B. sending and receiving OSPF Hello packets
- C. facilitates spanning-tree elections
- D. forwarding remote client/server traffic

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 719

Under which condition is TCP preferred over UDP?

- A. UDP is used when low latency is optimal, and TCP is used when latency is tolerable.
- B. TCP is used when dropped data is more acceptable, and UDP is used when data is accepted out-of-order.
- C. TCP is used when data reliability is critical, and UDP is used when missing packets are acceptable.
- D. UDP is used when data is highly interactive, and TCP is used when data is time-sensitive.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 720

```

SiteA#show interface TenGigabitEthernet0/1/0
TenGigabitEthernet0/1/0 is up, line protocol is up
  Hardware is BUILT-IN-EPA-8x10G, address is 780c.f02a.db91 (bia 780a.f02b.db91)
  Description: Connection to SiteB
  Internet address is 10.10.10.1/30
  MTU 8146 bytes, BW 10000000 Kbit/sec, DLY 10 usec,
    reliability 166/255, txload 1/255, rxload 1/255
  Full Duplex, 10000Mbps, link type is force-up, media type is SFP-LR
  5 minute input rate 264797000 bits/sec, 26672 packets/sec
  5 minute output rate 122464000 bits/sec, 15724 packets/sec

SiteB#show interface TenGigabitEthernet0/1/0
TenGigabitEthernet0/1/0 is up, line protocol is up
  Hardware is BUILT-IN-EPA-8x10G, address is 780c.f02c.db26 (bia 780c.f02c.db26)
  Description: Connection to SiteA
  Internet address is 10.10.10.2/30
  MTU 8146 bytes, BW 10000000 Kbit/sec, DLY 10 usec,
    reliability 255/255, txload 1/255, rxload 1/255
  Full Duplex, 10000Mbps, link type is force-up, media type is SFP-LR
  5 minute input rate 122464000 bits/sec, 15724 packets/sec
  5 minute output rate 264797000 bits/sec, 26672 packets/sec

```

Refer to the exhibit. Shortly after SiteA was connected to SiteB over a new single-mode fiber path, users at SiteA report intermittent connectivity issues with applications hosted at SiteB. What is the cause of the intermittent connectivity issue?

- A. Interface errors are incrementing.
- B. High usage is causing high latency.
- C. An incorrect SFP media type was used at SiteA.
- D. The sites were connected with the wrong cable type.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 721

A network engineer must configure the router R1 GigabitEthernet1/1 interface to connect to the router R2 GigabitEthernet1/1 interface. For the configuration to be applied, the engineer must compress the address 2001:0db8:0000:0000:0500:000a:400F:583B. Which command must be issued on the interface?

- A. ipv6 address 2001::db8:0000::500:a:400F:583B
- B. ipv6 address 2001:db8:0::500:a:4F:583B
- C. ipv6 address 2001:db8::500:a:400F:583B
- D. ipv6 address 2001:0db8::5:a:4F:583B

Correct Answer: C

QUESTION 722

What is a network appliance that checks the state of a packet to determine whether the packet is legitimate?

- A. Layer 2 switch
- B. LAN controller
- C. load balancer
- D. firewall

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 723

What is a role of access points in an enterprise network?

- A. integrate with SNMP in preventing DDoS attacks
- B. serve as a first line of defense in an enterprise network
- C. connect wireless devices to a wired network
- D. support secure user logins to devices on the network

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 724

An implementer is preparing hardware for virtualization to create virtual machines on a host. What is needed to provide communication between hardware and virtual machines?

- A. router
- B. hypervisor
- C. switch
- D. straight cable

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 725

How does a Cisco Unified Wireless Network respond to Wi-Fi channel overlap?

- A. It allows the administrator to assign the channels on a per-device or per-interface basis.
- B. It segregates devices from different manufacturers onto different channels.
- C. It analyzes client load and background noise and dynamically assigns a channel.
- D. It alternates automatically between 2.4 GHz and 5 GHz on adjacent access points.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 726

In which situation is private IPv4 addressing appropriate for a new subnet on the network of an organization?

- A. The network has multiple endpoint listeners, and it is desired to limit the number of broadcasts.
- B. The ISP requires the new subnet to be advertised to the Internet for web services.
- C. There is limited unique address space, and traffic on the new subnet will stay local within the organization.
- D. Traffic on the subnet must traverse a site-to-site VPN to an outside organization.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

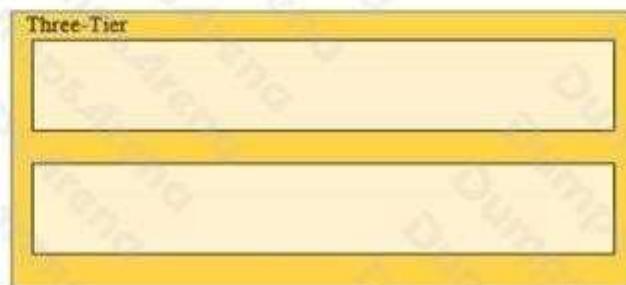

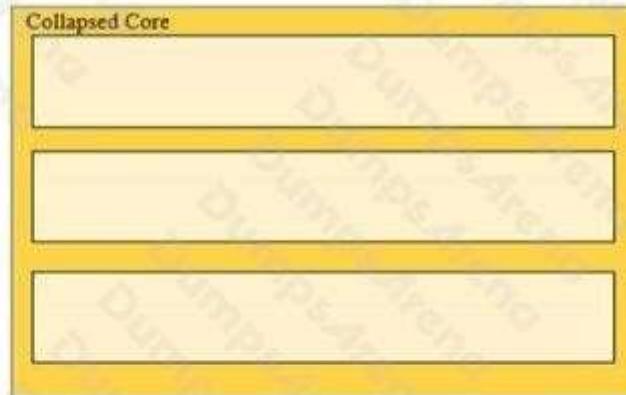

QUESTION 727

DRAG DROP

Drag and drop the characteristics of network architectures from the left onto the type of architecture on the right.

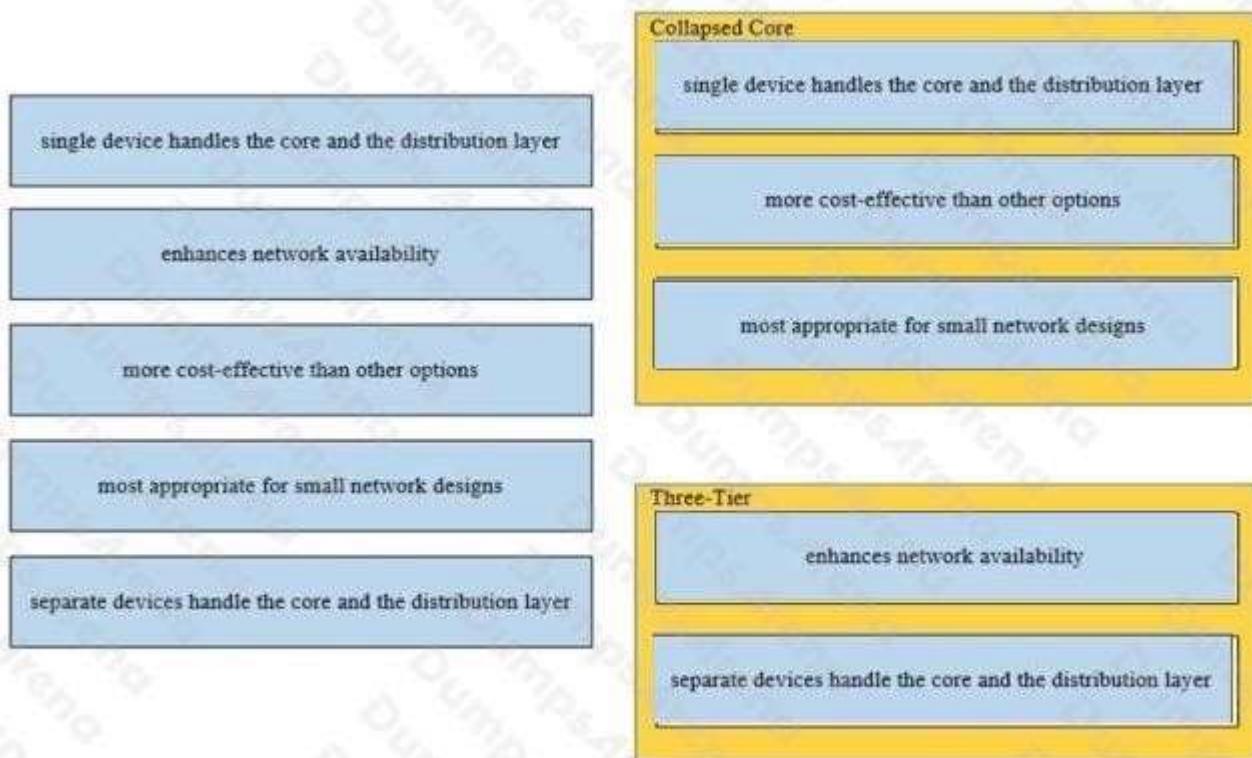

Select and Place:

- single device handles the core and the distribution layer
- enhances network availability
- more cost-effective than other options
- most appropriate for small network designs
- separate devices handle the core and the distribution layer

Answer:

A.

Correct Answer: A

Section: (none)

QUESTION 728

Which 802.11 frame type is indicated by a probe response after a client sends a probe request?

- A. data
- B. management
- C. control
- D. action

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 729

What is the difference in data transmission delivery and reliability between TCP and UDP?

- A. TCP transmits data at a higher rate and ensures packet delivery. UDP retransmits lost data to ensure

- applications receive the data on the remote end.
- B. TCP requires the connection to be established before transmitting data. UDP transmits data at a higher rate without ensuring packet delivery.
 - C. UDP sets up a connection between both devices before transmitting data. TCP uses the three-way handshake to transmit data with a reliable connection.
 - D. UDP is used for multicast and broadcast communication. TCP is used for unicast communication and transmits data at a higher rate with error checking.

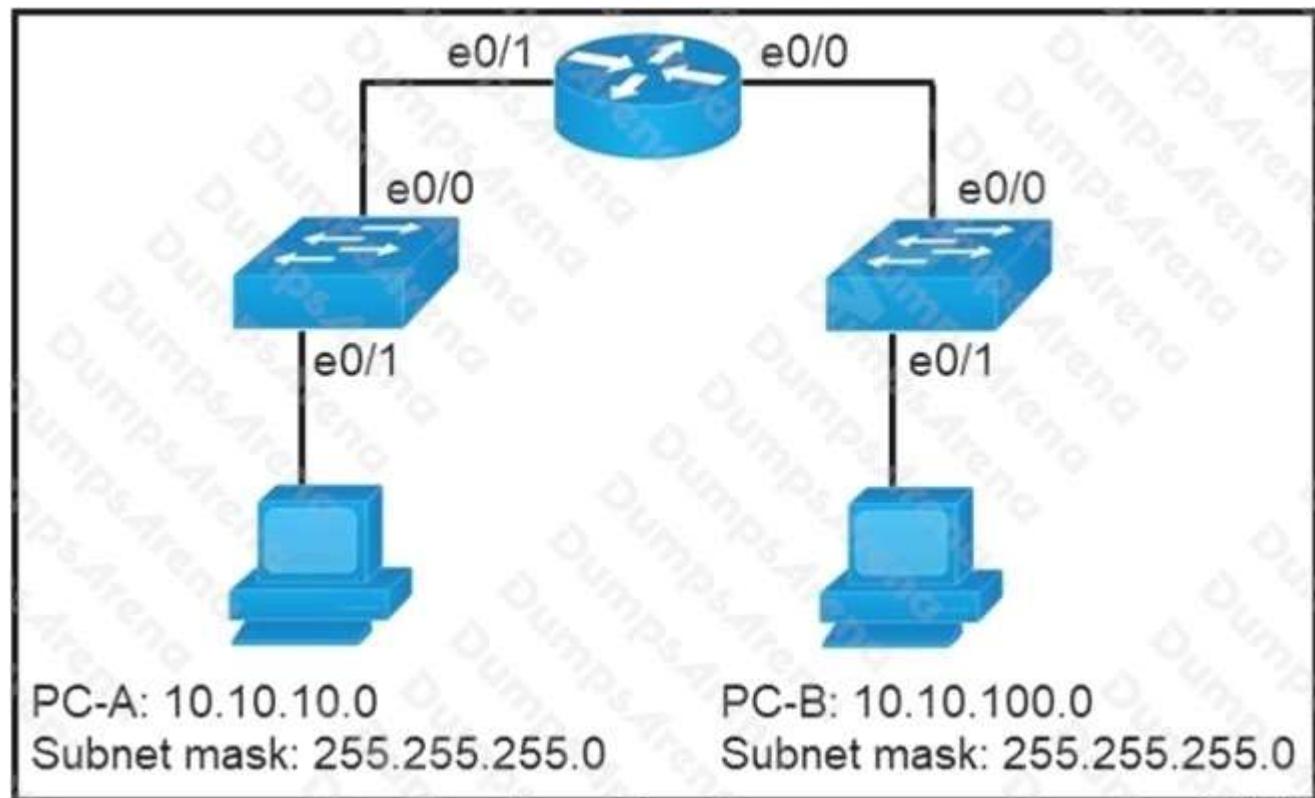

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 730

Refer to the exhibit. When PC-A sends traffic to PC-B, which network component is in charge of receiving the packet from PC-A, verifying the IP addresses, and forwarding the packet to PC-B?

- A. router
- B. Layer 2 switch
- C. load balancer
- D. firewall

Correct Answer: A

Explanation

Explanation/Reference:

QUESTION 731

What is the maximum bandwidth of a T1 point-to-point connection?

- A. 1.544 Mbps
- B. 2.048 Mbps
- C. 34.368 Mbps
- D. 43.7 Mbps

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 732

What are two similarities between UTP Cat 5e and Cat 6a cabling? (Choose two.)

- A. Both support speeds up to 10 Gigabit.
- B. Both support speeds of at least 1 Gigabit.
- C. Both support runs of up to 55 meters.
- D. Both support runs of up to 100 meters.
- E. Both operate at a frequency of 500 MHz.

Correct Answer: BD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 733

What is a characteristic of cloud-based network topology?

- A. onsite network services are provided with physical Layer 2 and Layer 3 components
- B. wireless connections provide the sole access method to services
- C. physical workstations are configured to share resources
- D. services are provided by a public, private, or hybrid deployment

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 734

Which network action occurs within the data plane?

- A. reply to an incoming ICMP echo request
- B. make a configuration change from an incoming NETCONF RPC
- C. run routing protocols (OSPF, EIGRP, RIP, BGP)
- D. compare the destination IP address to the IP routing table

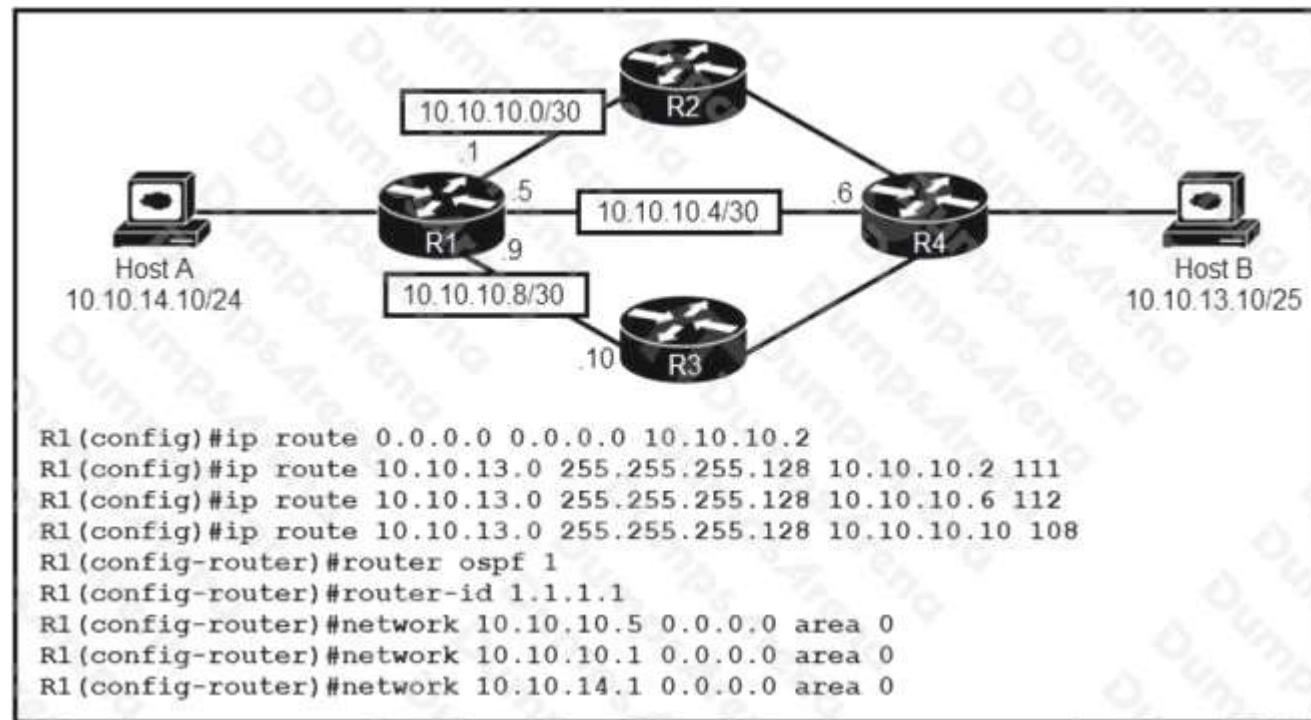

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 735

Refer to the exhibit. R1 has just received a packet from host A that is destined to host

Which route in the routing table is used by R1 to reach host B?

- A. 10.10.13.0/25 [1/0] via 10.10.10.2
- B. 10.10.13.0/25 [108/0] via 10.10.10.10
- C. 10.10.13.0/25 [110/2] via 10.10.10.6
- D. 10.10.13.0/25 [110/2] via 10.10.10.2

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 736

Which two network actions occur within the data plane? (Choose two.)

- A. Run routing protocols.
- B. Make a configuration change from an incoming NETCONF RPC.
- C. Add or remove an 802.1Q trunking header.
- D. Match the destination MAC address to the MAC address table.
- E. Reply to an incoming ICMP echo request.

Correct Answer: DE

Explanation/Reference:

QUESTION 737

What are network endpoints?

- A. support inter-VLAN connectivity
- B. a threat to the network if they are compromised
- C. act as routers to connect a user to the service provider network
- D. enforce policies for campus-wide traffic going to the Internet

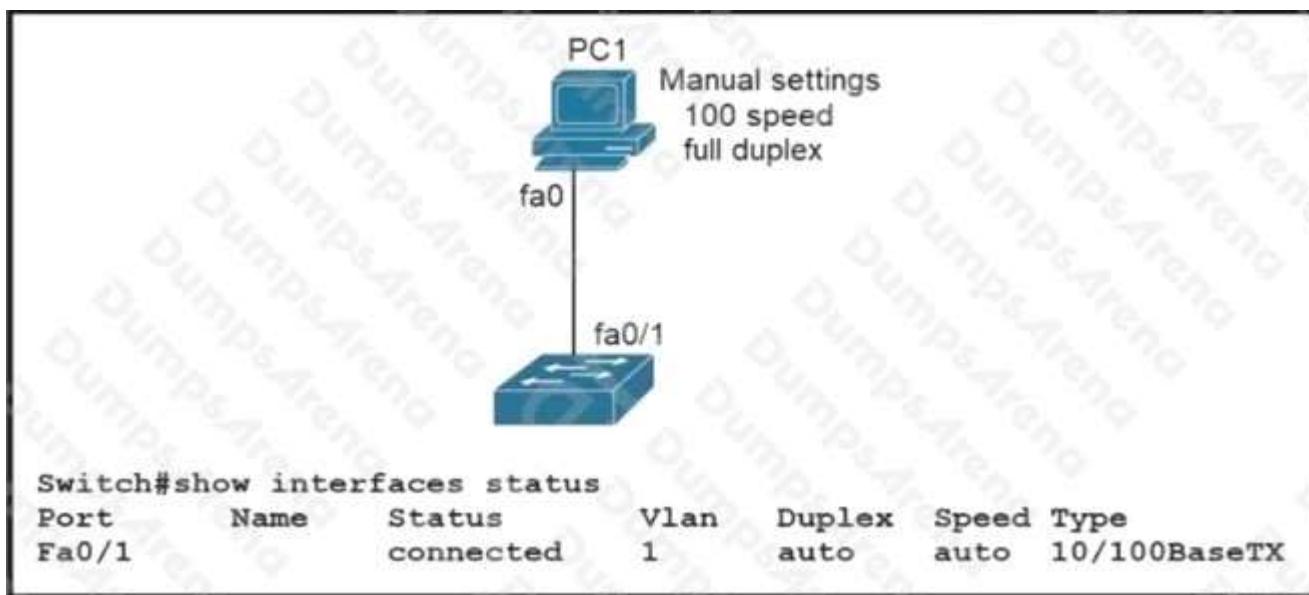

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 738

Refer to the exhibit. The link between PC1 and the switch is up, but it is performing poorly. Which interface condition is causing the performance problem?

- A. There is an issue with the fiber on the switch interface.
- B. There is a duplex mismatch on the interface.

- C. There is an interface type mismatch.
- D. There is a speed mismatch on the interface.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 739

Why was the RFC 1918 address space defined?

- A. conserve public IPv4 addressing
- B. support the NAT protocol
- C. preserve public IPv6 address space
- D. reduce instances of overlapping IP addresses

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 740

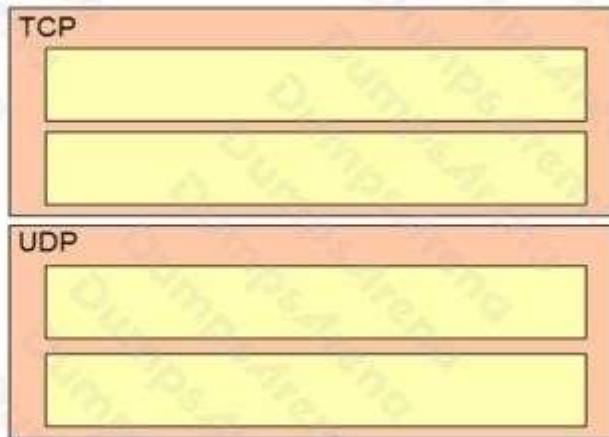

DRAG DROP

Drag and drop the TCP or UDP details from the left onto their corresponding protocols on the right.

Select and Place:

Answer Area

- transmitted based on data contained in the packet without the need for a data channel
- requires the client and the server to establish a connection before sending the packet
- provides best-effort service
- supports reliable data transmission

Answer:

A.

Answer Area

transmitted based on data contained in the packet without the need for a data channel

requires the client and the server to establish a connection before sending the packet

provides best-effort service

supports reliable data transmission

TCP

requires the client and the server to establish a connection before sending the packet

supports reliable data transmission

UDP

transmitted based on data contained in the packet without the need for a data channel

provides best-effort service

Correct Answer: A

Section: (none)

QUESTION 742

Which type of organization should use a collapsed-core architecture?

- A. small and needs to reduce networking costs
- B. large and must minimize downtime when hardware fails
- C. large and requires a flexible, scalable network design
- D. currently small but is expected to grow dramatically in the near future

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 743

A network administrator is setting up a new IPv6 network using the 64-bit address 2001:0EB8:00C1:2200:0001:0000:0000:0331/64. To simplify the configuration, the administrator has decided to compress the address. Which IP address must the administrator configure?

- A. ipv6 address 2001:EB8:C1:22:1::331/64
- B. ipv6 address 21:EB8:C1:2200:1::331/64
- C. ipv6 address 2001:EB8:C1:2200:1:0000:331/64
- D. ipv6 address 2001:EB8:C1:2200:1::331/64

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 744

What is the primary effect of the spanning-tree portfast command?

- A. It immediately enables the port in the listening state.
- B. It immediately puts the port into the forwarding state when the switch is reloaded.
- C. It enables BPDU messages.
- D. It minimizes spanning-tree convergence time.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

https://www.cisco.com/c/en/us/td/docs/switches/lan/catalyst3560/software/release/12-2_55_se/configuration/guide/3560_scg/swstpopt.html

QUESTION 745

What occurs when PortFast is enabled on an interface that is connected to another switch?

- A. Root port choice and spanning-tree recalculation are accelerated when a switch link goes down.
- B. After spanning-tree converges, PortFast shuts down any port that receives BPDUs.
- C. VTP is allowed to propagate VLAN configuration information from switch to switch automatically.
- D. Spanning-tree fails to detect a switching loop increasing the likelihood of broadcast storms.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Enabling the PortFast feature causes a switch or a trunk port to enter the STP forwarding-state immediately or upon a linkup event, thus bypassing the listening and learning states.

Note: To enable portfast on a trunk port you need the trunk keyword "spanning-tree portfast trunk"

QUESTION 746

Which QoS Profile is selected in the GUI when configuring a voice over WLAN deployment?

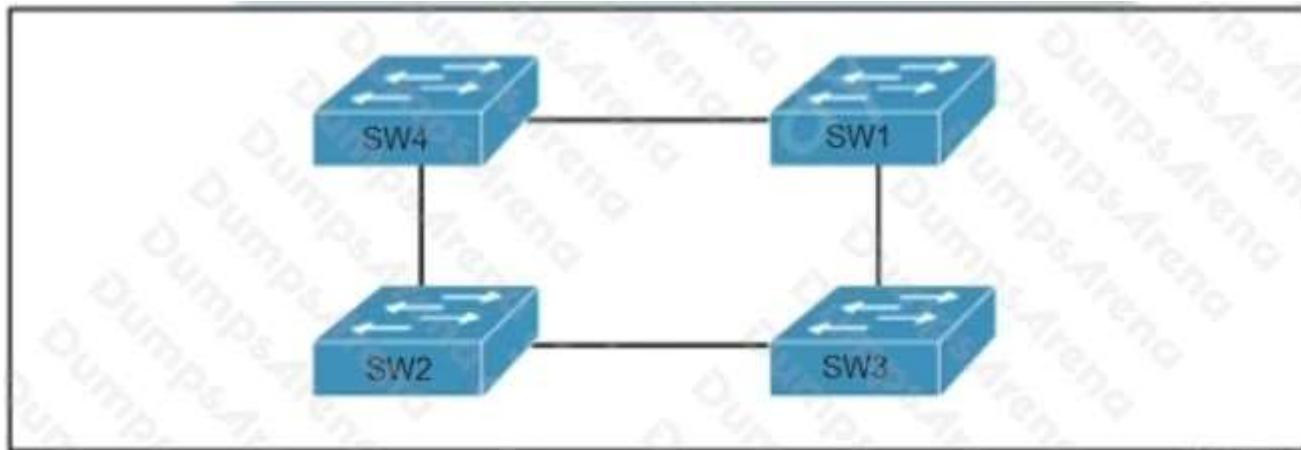

- A. Platinum
- B. Bronze
- C. Gold
- D. Silver

Correct Answer: A

Section: (none)**Explanation****Explanation/Reference:**

Cisco Unified Wireless Network solution WLANs support four levels of QoS: Platinum/Voice, Gold/Video, Silver/Best Effort (default), and Bronze/Background.

Reference: https://www.cisco.com/c/en/us/td/docs/wireless/controller/7-4/configuration/guides/consolidated/b_cg74_CONSOLIDATED/b_cg74_CONSOLIDATED_chapter_01010111.html

QUESTION 747

Refer to the exhibit. Which switch in this configuration will be elected as the root bridge?

SW1: 0C:E0:38:41:86:07

SW2: 0C:0E:15:22:05:97

SW3: 0C:0E:15:1A:3C:9D

SW4: 0C:E0:18:A1:B3:19

- A. SW1
- B. SW2
- C. SW3
- D. SW4

Correct Answer: C

QUESTION 753

DRAG DROP

Drag and drop the WLAN components from the left onto the correct descriptions on the right.

Select and Place:

Answer Area

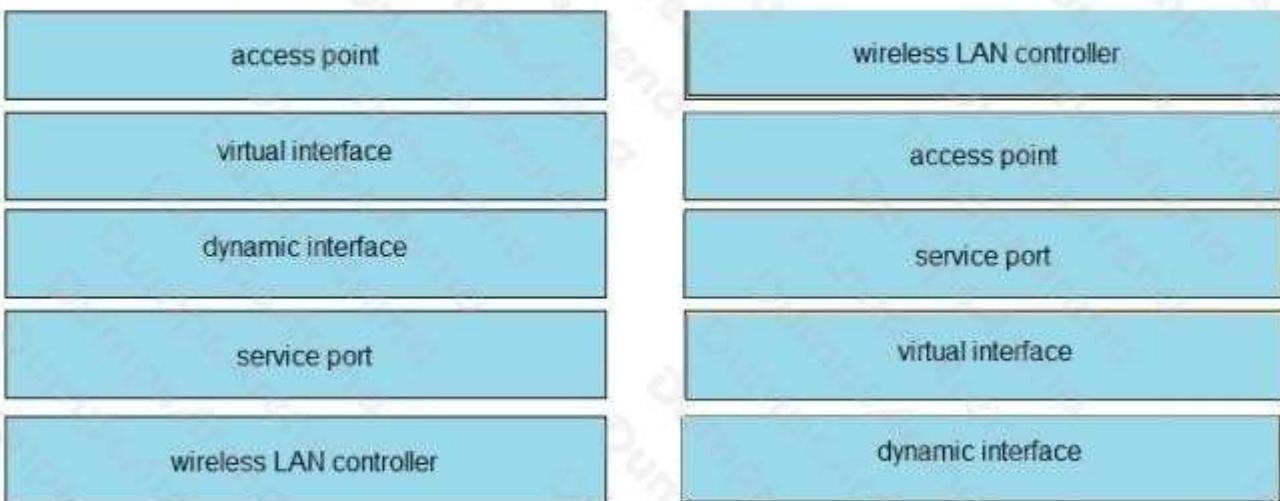

access point
virtual interface
dynamic interface
service port
wireless LAN controller

device that manages access points
device that provides Wi-Fi devices with a connection to a wired network
used for out of band management of a WLC
used to support mobility management of the WLC
applied to the WLAN for wireless client communication

Answer:

A.

Answer Area

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

The service port can be used for management purposes, primarily for out-of-band management. However, AP management traffic is not possible across the service port. In most cases, the service port is used as a "last resort" means of accessing the controller GUI for management purposes. For example, in the case where the system distribution ports on the controller are down or their communication to the wired network is otherwise degraded.

A dynamic interface with the Dynamic AP Management option enabled is used as the tunnel source for packets from the controller to the access point and as the destination for CAPWAP packets from the access point to the controller.

The virtual interface is used to support mobility management, Dynamic Host Configuration Protocol (DHCP) relay, and embedded Layer 3 security such as guest web authentication. It also maintains the DNS gateway host name used by Layer 3 security and mobility managers to verify the source of certificates when Layer 3 web authorization is enabled.

Reference: https://www.cisco.com/c/en/us/td/docs/wireless/controller/8-5/config-guide/b_cg85/ports_and_interfaces.html

QUESTION 754

Which unified access point mode continues to serve wireless clients after losing connectivity to the Cisco Wireless LAN Controller?

- A. local
- B. mesh
- C. flexconnect
- D. sniffer

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

In previous releases, whenever a FlexConnect access point disassociates from a controller, it moves to the standalone mode. The clients that are centrally switched are disassociated. However, the FlexConnect access point continues to serve locally switched clients. When the FlexConnect access point rejoins the controller (or a standby controller), all clients are disconnected and are authenticated again. This functionality has been enhanced and the connection between the clients and the FlexConnect access points are maintained intact and the clients experience seamless connectivity. When both the access point and the controller have the same configuration, the connection between the clients and APs is maintained.

Reference: https://www.cisco.com/c/en/us/td/docs/wireless/controller/7-4/configuration/guides/consolidated/b_cg74_CONSOLIDATED/b_cg74_CONSOLIDATED_chapter_010001101.html

QUESTION 755

Router#

**Capability Codes: R - Router, T - Trans Bridge, B - Source Route Bridge
S -Switch, H - Host, I - IGMP, r - Repeater, P - Phone,
D - Remote, C - CVTA, M - Two-port Mac Relay**

Device ID	Local Interface	Holdtime	Capability	Platform	Port ID
10.1.1.2	Gig 37/3	176	R I	CPT 600	Gig 36/41
10.1.1.2	Gig 37/1	174	R I	CPT 600	Gig 36/43
10.1.1.2	Gig 36/41	134	R I	CPT 600	Gig 37/3
10.1.1.2	Gig 36/43	134	R I	CPT 600	Gig 37/1
10.1.1.2	Ten 3/2	132	R I	CPT 600	Ten 4/2
10.1.1.2	Ten 4/2	174	R I	CPT 600	Ten 3/2

Refer to the exhibit. Which command provides this output?

- A. show ip route
- B. show cdp neighbor
- C. show ip interface
- D. show interface

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 756

Which mode must be used to configure EtherChannel between two switches without using a negotiation protocol?

- A. active
- B. on

- C. auto
- D. desirable

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

The Static Persistence (or "on" mode) bundles the links unconditionally and no negotiation protocol is used. In this mode, neither PAgP nor LACP packets are sent or received.

QUESTION 757

Which mode allows access points to be managed by Cisco Wireless LAN Controllers?

- A. bridge
- B. lightweight
- C. mobility express
- D. autonomous

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

A Lightweight Access Point (LAP) is an AP that is designed to be connected to a wireless LAN (WLAN) controller (WLC). APs are "lightweight," which means that they cannot act independently of a wireless LAN controller (WLC). The WLC manages the AP configurations and firmware. The APs are "zero touch" deployed, and individual configuration of APs is not necessary.

QUESTION 758

Which two values or settings must be entered when configuring a new WLAN in the Cisco Wireless LAN Controller GUI? (Choose two.)

- A. QoS settings
- B. IP address of one or more access points
- C. SSID
- D. profile name
- E. management interface settings

Correct Answer: CD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 759

Which command is used to specify the delay time in seconds for LLDP to initialize on any interface?

- A. lldp timer
- B. lldp tlv-select
- C. lldp reinit
- D. lldp holdtime

Correct Answer: C

Section: (none)**Explanation****Explanation/Reference:**

Explanation:

- **lldp holdtime seconds:** Specify the amount of time a receiving device should hold the information from your device before discarding it
- **lldp reinit delay:** Specify the delay time in seconds for LLDP to initialize on an interface
- **lldp timer rate:** Set the sending frequency of LLDP updates in seconds

Reference: https://www.cisco.com/c/en/us/td/docs/switches/lan/catalyst3560/software/release/12-2_55_se/configuration/guide/3560_scg/swlldp.html

QUESTION 760

```
SW2
vtp domain cisco
vtp mode transparent
vtp password ciscotest
interface fastethernet0/1
  description connection to sw1
  switchport mode trunk
  switchport trunk encapsulation dot1q
```

Refer to the exhibit. How does SW2 interact with other switches in this VTP domain?

- A. It transmits and processes VTP updates from any VTP clients on the network on its trunk ports.
- B. It processes VTP updates from any VTP clients on the network on its access ports.
- C. It receives updates from all VTP servers and forwards all locally configured VLANs out all trunk ports.
- D. It forwards only the VTP advertisements that it receives on its trunk ports.

Correct Answer: D

Section: (none)**Explanation****Explanation/Reference:**

The VTP mode of SW2 is transparent so it only forwards the VTP updates it receives to its trunk links without processing them.

Reference: <https://www.cisco.com/c/en/us/support/docs/lan-switching/vtp/10558-21.html>

QUESTION 761

```

SW1#sh lacp neighbor
Flags: S - Device is requesting Slow LACPDU
      F - Device is requesting Fast LACPDU
      A - Device is in Active mode      P - Device is in Passive mode

Channel group 35 neighbors

Partner's information:

      LACP port
Port  Flags Priority Dev ID      Admin  Oper  Port  Port
      key   Key    Number  State
Et1/0  SP    32768   aabb.cc80.7000 8s    0x0   0x23  0x101 0x3C
Et1/1  SP    32768   aabb.cc80.7000 8s    0x0   0x23  0x102 0x3C

```

Refer to the exhibit. Based on the LACP neighbor status, in which mode is the SW1 port channel configured?

- A. mode on
- B. active
- C. passive
- D. auto

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

From the neighbor status, we notice the "Flags" are SP. "P" here means the neighbor is in Passive mode. In order to create an Etherchannel interface, the (local) SW1 ports should be in Active mode. Moreover, the "Port State" in the exhibit is "0x3c" (which equals to "00111100 in binary format). Bit 3 is "1" which means the ports are synchronizing -> the ports are working so the local ports should be in Active mode.

QUESTION 762

Two switches are connected and using Cisco Dynamic Trunking Protocol. SW1 is set to Dynamic Auto and SW2 is set to Dynamic Desirable. What is the result of this configuration?

- A. The link becomes an access port.
- B. The link is in an error disabled state.
- C. The link is in a down state.
- D. The link becomes a trunk port.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 763

A Cisco IP phone receives untagged data traffic from an attached PC. Which action is taken by the phone?

- A. It drops the traffic.
- B. It allows the traffic to pass through unchanged.

- C. It tags the traffic with the native VLAN.
- D. It tags the traffic with the default VLAN.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Untagged traffic from the device attached to the Cisco IP Phone passes through the phone unchanged, regardless of the trust state of the access port on the phone.

Reference: https://www.cisco.com/c/en/us/td/docs/switches/lan/catalyst2960/software/release/12-2_40_se/configuration/guide/scg/swvoip.pdf

QUESTION 764

Which design element is a best practice when deploying an 802.11b wireless infrastructure?

- A. allocating nonoverlapping channels to access points that are in close physical proximity to one another
- B. disabling TCP so that access points can negotiate signal levels with their attached wireless devices
- C. configuring access points to provide clients with a maximum of 5 Mbps
- D. setting the maximum data rate to 54 Mbps on the Cisco Wireless LAN Controller

Correct Answer: A

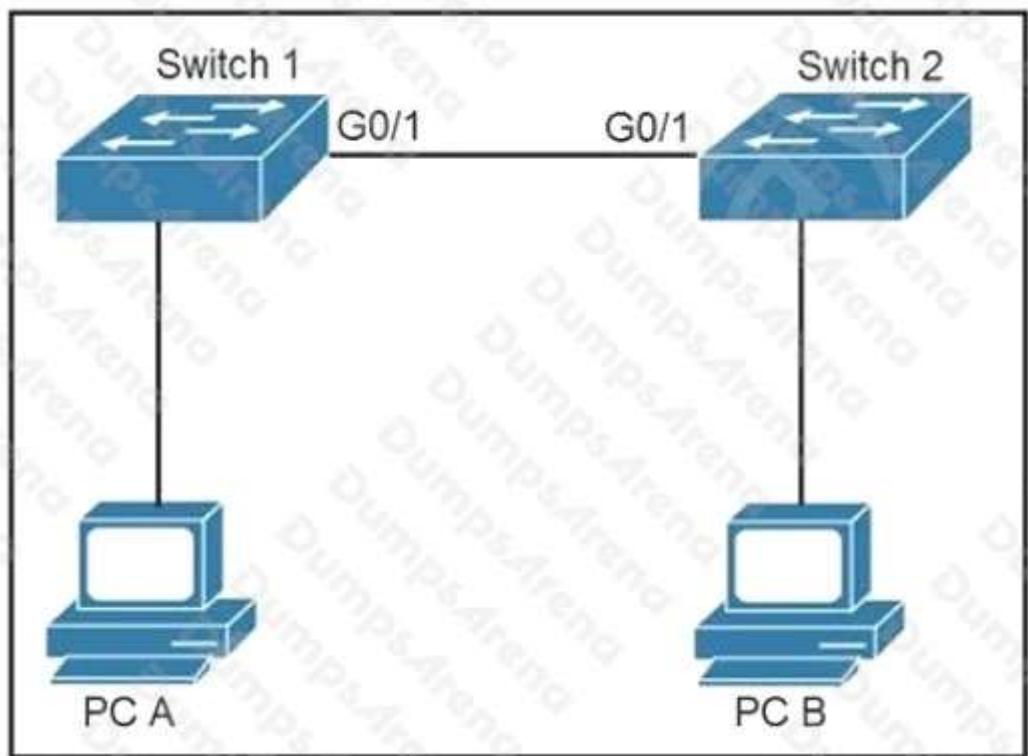

Section: (none)

Explanation

Explanation/Reference:

QUESTION 765

Refer to the exhibit. The network administrator wants VLAN 67 traffic to be untagged between Switch 1 and Switch 2, while all other VLANs are to remain tagged. Which command accomplishes this task?

- A. switchport access vlan 67
- B. switchport trunk allowed vlan 67
- C. switchport private-vlan association host 67
- D. switchport trunk native vlan 67

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 766

Which two command sequences must be configured on a switch to establish a Layer 3 EtherChannel with an open-standard protocol? (Choose two.)

- A. interface GigabitEthernet0/0/1 channel-group 10 mode auto
- B. interface GigabitEthernet0/0/1 channel-group 10 mode on
- C. interface port-channel 10 no switchport
ip address 172.16.0.1 255.255.255.0
- D. interface GigabitEthernet0/0/1 channel-group 10 mode active
- E. interface port-channel 10 switchport switchport mode trunk

Correct Answer: DE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 767

Refer to the exhibit. Which two commands when used together create port channel 10? (Choose two.)

Switch#show etherchannel summary [output omitted]				
Group	Port-channel	Protocol	Ports	
10	Po10(SU)	LACP	Gi0/0(P)	Gi0/1(P)
20	Po20(SU)	LACP	Gi0/2(P)	Gi0/3(P)

- A. int range g0/0-1 channel-group 10 mode active
- B. int range g0/0-1 channel-group 10 mode desirable
- C. int range g0/0-1 channel-group 10 mode passive
- D. int range g0/0-1 channel-group 10 mode auto
- E. int range g0/0-1 channel-group 10 mode on

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 768

Refer to the exhibit. An administrator is tasked with configuring a voice VLAN. What is the expected outcome when a Cisco phone is connected to the GigabitEthernet 3/1/4 port on a switch?

```
interface GigabitEthernet3/1/4
  switchport voice vlan 50
!
```

- A. The phone and a workstation that is connected to the phone do not have VLAN connectivity.
- B. The phone sends and receives data in VLAN 50, but a workstation connected to the phone sends and receives data in VLAN 1.
- C. The phone sends and receives data in VLAN 50, but a workstation connected to the phone has no VLAN connectivity.
- D. The phone and a workstation that is connected to the phone send and receive data in VLAN 50.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 769

Refer to the exhibit. Which action is expected from SW1 when the untagged frame is received on the GigabitEthernet0/1 interface?

```
SW1#show run int gig 0/1
interface GigabitEthernet0/1
  switchport access vlan 11
  switchport trunk allowed vlan 1-10
  switchport trunk encapsulation dot1q
  switchport trunk native vlan 5
  switchport mode trunk
  speed 1000
  duplex full
```

- A. The frame is processed in VLAN 1
- B. The frame is processed in VLAN 11
- C. The frame is processed in VLAN 5
- D. The frame is dropped

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 770

Which command is used to enable LLDP globally on a Cisco IOS ISR?

- A. llpd run
- B. llpd enable
- C. llpd transmit
- D. cdp run
- E. cdp enable

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Link Layer Discovery Protocol (LLDP) is an industry standard protocol that allows devices to advertise, and discover connected devices, and their capabilities (same as CDP of Cisco). To enable it on Cisco devices, we have to use this command under global configuration mode: Sw(config)# llpd run

QUESTION 771

Which command should you enter to configure an LLDP delay time of 5 seconds?

- A. lldp timer 5000
- B. lldp holdtime 5
- C. lldp reinit 5000
- D. lldp reinit 5

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

lldp holdtime seconds: Specify the amount of time a receiving device should hold the information from your device before discarding it
lldp reinit delay: Specify the delay time in seconds for LLDP to initialize on an interface
lldp timer rate: Set the sending frequency of LLDP updates in seconds

Reference: https://www.cisco.com/c/en/us/td/docs/switches/lan/catalyst3560/software/release/12-2_55_se/configuration/guide/3560_scg/swlldp.html

QUESTION 772

In a CDP environment, what happens when the CDP interface on an adjacent device is configured without an IP address?

- A. CDP becomes inoperable on that neighbor
- B. CDP uses the IP address of another interface for that neighbor
- C. CDP operates normally, but it cannot provide IP address information for that neighbor
- D. CDP operates normally, but it cannot provide any information for that neighbor

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Although CDP is a Layer 2 protocol but we can check the neighbor IP address with the "show cdp neighbor detail" command. If the neighbor does not have an IP address then CDP still operates without any problem. But the IP address of that neighbor is not provided.

QUESTION 773

DRAG DROP

Drag and drop the benefits of a Cisco Wireless Lan Controller from the left onto the correct examples on the right.

Select and Place:

Dynamic RF Feature	Controller provides centralized management of users and VLANs
Easy Deployment Process	Access points auto adjust signal strength
Optimized user performance	Controller image auto deployed to access Points
Easy upgrade process	Controller uses loadbalancing to maximize throughput

Answer:

A.

Dynamic RF Feature	Easy Deployment Process
Easy Deployment Process	Dynamic RF Feature
Optimized user performance	Easy upgrade process
Easy upgrade process	Optimized user performance

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 774

When configuring an EtherChannel bundle, which mode enables LACP only if a LACP device is detected?

- A. Passive
- B. Desirable
- C. On
- D. Auto
- E. Active

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

The LACP is Link Aggregation Control Protocol. LACP is an open protocol, published under the 802.3ad.

The modes of LACP are active, passive or on. The side configured as "passive" will wait for the other side that should be an Active for the Etherchannel to be established. PAgP is Port-Aggregation Protocol. It is Cisco's proprietary protocol. The modes are On, Desirable or Auto. Desirable or Auto will establish an EtherChannel.

An example of how to configure an Etherchannel:

```
SwitchFormula1>enable
```

```
SwitchFormula1#configure terminal
```

```
SwitchFormula1(config)# interface range f0/5 -14
```

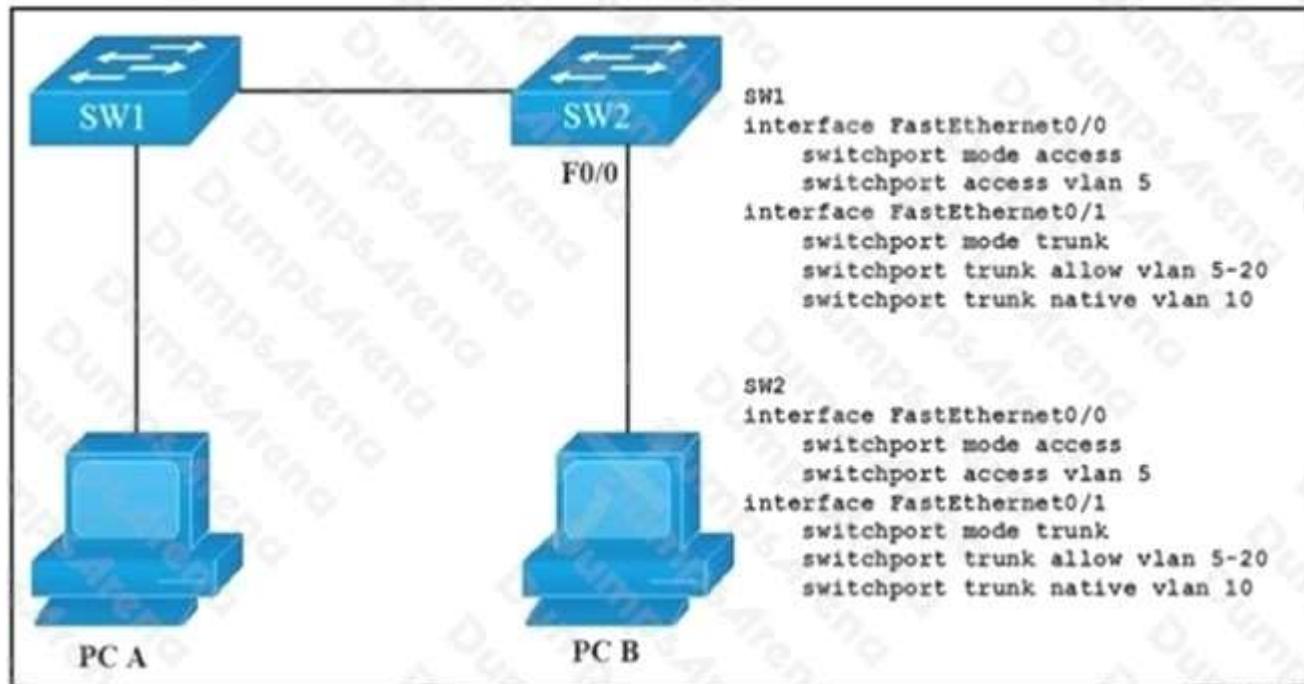

```
SwitchFormula1(config-if-range)# channel-group 13 mode ? active
```

Enable LACP unconditionally
auto Enable PAgP only if a PAgP device is detected
desirable Enable PAgP unconditionally on Enable Etherchannel only

passive Enable LACP only if a LACP device is detected

QUESTION 775

Refer to the exhibit. Which VLAN ID is associated with the default VLAN in the given environment?

- A. VLAN 1
- B. VLAN 5
- C. VLAN 10
- D. VLAN 20

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 776

Which two VLAN IDs indicate a default VLAN? (Choose two.)

- A. 0
- B. 1
- C. 1005
- D. 1006
- E. 4096

Correct Answer: BC

Section: (none)

Explanation

Explanation/Reference:

VLAN 1 is a system default VLAN, you can use this VLAN but you cannot delete it. By default VLAN 1 is used for every port on the switch.

Standard VLAN range from 1002-1005 it's Cisco default for FDDI and Token Ring. You cannot delete VLANs 1002-1005.

Mostly we don't use VLAN in this range.

QUESTION 777

Which two pieces of information about a Cisco device can Cisco Discovery Protocol communicate? (Choose two.)

- A. the native VLAN
- B. the trunking protocol
- C. the VTP domain
- D. the spanning-tree priority
- E. the spanning-tree protocol

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 778

After you deploy a new WLAN controller on your network, which two additional tasks should you consider? (Choose two.)

- A. deploy load balancers
- B. configure additional vlans
- C. configure multiple VRRP groups
- D. deploy POE switches
- E. configure additional security policies

Correct Answer: AE

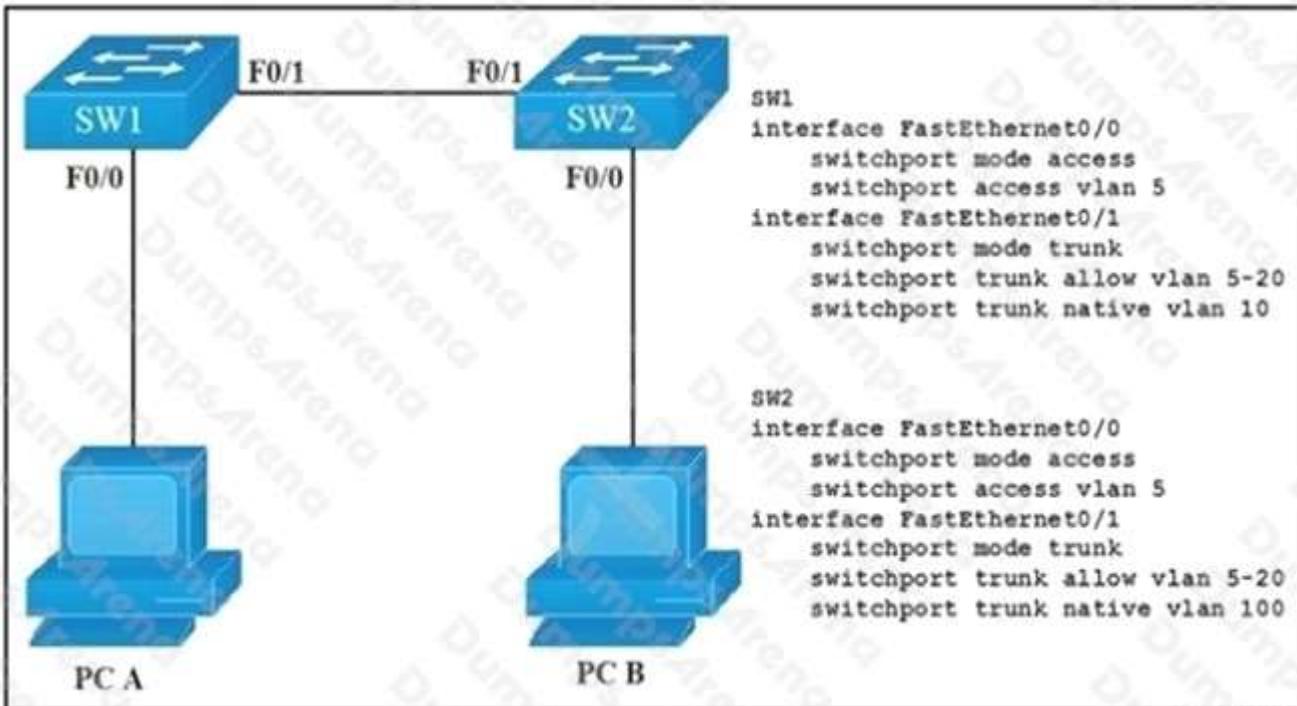

Section: (none)

Explanation

Explanation/Reference:

QUESTION 779

Refer to the exhibit. How will switch SW2 handle traffic from VLAN 10 on SW1?

- A. It sends the traffic to VLAN 10.
- B. It sends the traffic to VLAN 100.
- C. It drops the traffic.
- D. It sends the traffic to VLAN 1.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Since SW-1 is configured native VLAN is VLAN10, so traffic coming out of VLAN-10 is untagged, & goes directly to SW-2 Native VLAN: VLAN100, due to VLAN mismatch.

QUESTION 780

Which two commands can you use to configure an actively negotiate EtherChannel? (Choose two.)

- A. channel-group 10 mode on
- B. channel-group 10 mode auto
- C. channel-group 10 mode passive
- D. channel-group 10 mode desirable
- E. channel-group 10 mode active

Correct Answer: DE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 781

How does STP prevent forwarding loops at OSI Layer 2?

- A. TTL
- B. MAC address forwarding
- C. Collision avoidance
- D. Port blocking

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 782

Which two statements about VTP are true? (Choose two.)

- A. All switches must be configured with the same VTP domain name
- B. All switches must be configured to perform trunk negotiation
- C. All switches must be configured with a unique VTP domain name
- D. The VTP server must have the highest revision number in the domain
- E. All switches must use the same VTP version

Correct Answer: AE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 783

Which type does a port become when it receives the best BPDU on a bridge?

- A. The designated port
- B. The backup port
- C. The alternate port
- D. The root port

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 784

Which value can you modify to configure a specific interface as the preferred forwarding interface?

- A. The interface number
- B. The port priority
- C. The VLAN priority
- D. The hello time

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 785

Which statement about Cisco Discovery Protocol is true?

- A. It is a Cisco-proprietary protocol.
- B. It runs on the network layer.
- C. It can discover information from routers, firewalls, and switches.
- D. It runs on the physical layer and the data link layer.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 786

What are two reasons a network administrator would use CDP? (Choose two.)

- A. to verify the type of cable interconnecting two devices
- B. to determine the status of network services on a remote device
- C. to obtain VLAN information from directly connected switches
- D. to verify Layer 2 connectivity between two devices when Layer 3 fails
- E. to obtain the IP address of a connected device in order to telnet to the device
- F. to determine the status of the routing protocols between directly connected routers

Correct Answer: DE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 787

What are two benefits of using VTP in a switching environment? (Choose two.)

- A. It allows switches to read frame tags.
- B. It allows ports to be assigned to VLANs automatically.
- C. It maintains VLAN consistency across a switched network.
- D. It allows frames from multiple VLANs to use a single interface.
- E. It allows VLAN information to be automatically propagated throughout the switching environment.

Correct Answer: CE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 788

Which three statements are typical characteristics of VLAN arrangements? (Choose three.)

- A. A new switch has no VLANs configured.
- B. Connectivity between VLANs requires a Layer 3 device.
- C. VLANs typically decrease the number of collision domains.
- D. Each VLAN uses a separate address space.
- E. A switch maintains a separate bridging table for each VLAN.
- F. VLANs cannot span multiple switches.

Correct Answer: BDE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 789

On a corporate network, hosts on the same VLAN can communicate with each other, but they are unable to communicate with hosts on different VLANs. What is needed to allow communication between the VLANs?

- A. a router with subinterfaces configured on the physical interface that is connected to the switch
- B. a router with an IP address on the physical interface connected to the switch
- C. a switch with an access link that is configured between the switches
- D. a switch with a trunk link that is configured between the switches

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Different VLANs can't communicate with each other, they can communicate with the help of Layer3 router. Hence, it is needed to connect a router to a switch, then make the sub-interface on the router to connect to the switch, establishing Trunking links to achieve communications of devices which belong to different VLANs.

QUESTION 790

Which statement about LLDP is true?

- A. It is a Cisco proprietary protocol.
- B. It is configured in global configuration mode.
- C. The LLDP update frequency is a fixed value.
- D. It runs over the transport layer.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 791

What is a function of Wireless LAN Controller?

- A. register with a single access point that controls traffic between wired and wireless endpoints
- B. use SSIDs to distinguish between wireless clients
- C. send LWAPP packets to access points
- D. monitor activity on wireless and wired LANs

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 792

Which technology is used to improve web traffic performance by proxy caching?

- A. WSA
- B. Firepower
- C. ASA
- D. FireSIGHT

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 793

What criteria is used first during the root port selection process?

- A. local port ID
- B. lowest path cost to the root bridge
- C. lowest neighbor's bridge ID
- D. lowest neighbor's port ID

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 794

Which statement about VLAN configuration is true?

- A. The switch must be in VTP server or transparent mode before you can configure a VLAN
- B. The switch must be in config-vlan mode before you configure an extended VLAN
- C. Dynamic inter-VLAN routing is supported on VLAN2 through VLAN 4094
- D. A switch in VTP transparent mode saves the VLAN databases to the running configuration only

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 795

Refer to the exhibit. What two conclusions should be made about this configuration? (Choose two.)

```
SW1#show spanning-tree vlan 30
```

VLAN0030

Spanning tree enabled protocol rstp

Root ID	Priority	32798
	Address	0025.63e9.c800
	Cost	19
	Port	1 (FastEthernet 2/1)
	Hello Time	2 sec
	Max Age	30 sec
	Forward Delay	20 sec

[Output suppressed]

- A. The root port is FastEthernet 2/1
- B. The designated port is FastEthernet 2/1
- C. The spanning-tree mode is PVST+
- D. This is a root bridge
- E. The spanning-tree mode is Rapid PVST+

Correct Answer: AE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 796

A network engineer must create a diagram of a multivendor network. Which command must be configured on the Cisco devices so that the topology of the network is allowed to be mapped?

- A. Device(config)#lldp run
- B. Device(config)#cdp run
- C. Device(config-if)#cdp enable
- D. Device(config)#flow-sampler-map topology

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 797

How do AAA operations compare regarding user identification, user services, and access control?

- A. Authorization provides access control, and authentication tracks user services
- B. Authentication identifies users, and accounting tracks user services

- C. Accounting tracks user services, and authentication provides access control
- D. Authorization identifies users, and authentication provides access control

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 798

What is the difference between RADIUS and TACACS+?

- A. RADIUS logs all commands that are entered by the administrator, but TACACS+ logs only start, stop, and interim commands.
- B. TACACS+ separates authentication and authorization, and RADIUS merges them.
- C. TACACS+ encrypts only password information, and RADIUS encrypts the entire payload.
- D. RADIUS is most appropriate for dial authentication, but TACACS+ can be used for multiple types of authentication.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 799

What is a difference between local AP mode and FlexConnect AP mode?

- A. Local AP mode creates two CAPWAP tunnels per AP to the WLC
- B. Local AP mode causes the AP to behave as if it were an autonomous AP
- C. FlexConnect AP mode fails to function if the AP loses connectivity with the WLC
- D. FlexConnect AP mode bridges the traffic from the AP to the WLC when local switching is configured

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 800

The SW1 interface g0/1 is in the down/down state. What are two reasons for the interface condition? (Choose two.)

- A. There is a protocol mismatch
- B. There is a duplex mismatch
- C. The interface is shut down
- D. The interface is error-disabled
- E. There is a speed mismatch

Correct Answer: CD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 801

How will Link Aggregation be implemented on a Cisco Wireless LAN Controller?

- A. The EtherChannel must be configured in "mode active".
- B. When enabled, the WLC bandwidth drops to 500 Mbps.
- C. To pass client traffic, two or more ports must be configured.
- D. One functional physical port is needed to pass client traffic.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

https://www.cisco.com/c/en/us/td/docs/wireless/controller/8-2/config-guide/b_cg82/b_cg82_chapter_010101011.html

QUESTION 802

Which two conditions must be met before SSH operates normally on a Cisco IOS switch? (Choose two.)

- A. IP routing must be enabled on the switch.
- B. A console password must be configured on the switch.
- C. Telnet must be disabled on the switch.
- D. The switch must be running a k9 (crypto) IOS image.
- E. The ip domain-name command must be configured on the switch.

Correct Answer: DE

Section: (none)

Explanation

Explanation/Reference:

<https://www.cisco.com/c/en/us/support/docs/security-vpn/secure-shell-ssh/4145-ssh.html>

QUESTION 803

```
Atlanta#conf t
Enter configuration commands, one per line. End with CNTL/Z.
Atlanta(config)#aaa new-model
Atlanta(config)#aaa authentication login default local
Atlanta(config)#line vty 0 4
Atlanta(config-line)#login authentication default
Atlanta(config-line)#exit
Atlanta(config)#username ciscoadmin password adminadmin123
Atlanta(config)#username ciscoadmin privilege 15
Atlanta(config)#enable password cisco123
Atlanta(config)#enable secret testing1234
Atlanta(config)#end
```

Refer to the exhibit. Which password must an engineer use to enter the enable mode?

- A. adminadmin123
- B. cisco123
- C. default
- D. testing1234

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

If neither the enable password command nor the enable secret command is configured, and if there is a line password configured for the console, the console line password serves as the enable password for all VTY sessions -> The "enable secret" will be used first if available, then "enable password" and line password.

QUESTION 804

Which state does the switch port move to when PortFast is enabled?

- A. blocking
- B. listening
- C. learning
- D. forwarding

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 805

Which protocol prompts the Wireless LAN Controller to generate its own local web administration SSL certificate for GUI access?

- A. RADIUS
- B. HTTPS
- C. TACACS+
- D. HTTP

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

You can protect communication with the GUI by enabling HTTPS. HTTPS protects HTTP browser sessions by using the Secure Sockets Layer (SSL) protocol. When you enable HTTPS, the controller generates its own local web administration SSL certificate and automatically applies it to the GUI. You also have the option of downloading an externally generated certificate. Reference: https://www.cisco.com/c/en/us/td/docs/wireless/controller/8-0/configuration-guide/b_cg80/b_cg80_chapter_011.html

QUESTION 806

An engineer must configure interswitch VLAN communication between a Cisco switch and a third-party switch. Which action should be taken?

- A. configure DSCP
- B. configure IEEE 802.1q
- C. configure ISL
- D. configure IEEE 802.1p

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

VLAN trunking offers two options, ISL and 802.1Q. ISL is Cisco proprietary while 802.1Q is standards based and supported by multiple vendors.

QUESTION 807

An engineer requires a switch interface to actively attempt to establish a trunk link with a neighbor switch. What command must be configured?

- A. switchport mode trunk
- B. switchport mode dynamic desirable
- C. switchport nonegotiate
- D. switchport mode dynamic auto

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

<https://www.ciscopress.com/articles/article.asp?p=2181837&seqNum=8#:~:text=switchport%20mode%20dynamic%20auto%20Makes,to%20trunk%20or%20desirable%20mode.&text=switchport%20mode%20dynamic%20desirable%20Makes,link%20to%20a%20trunk%20link.>

QUESTION 808

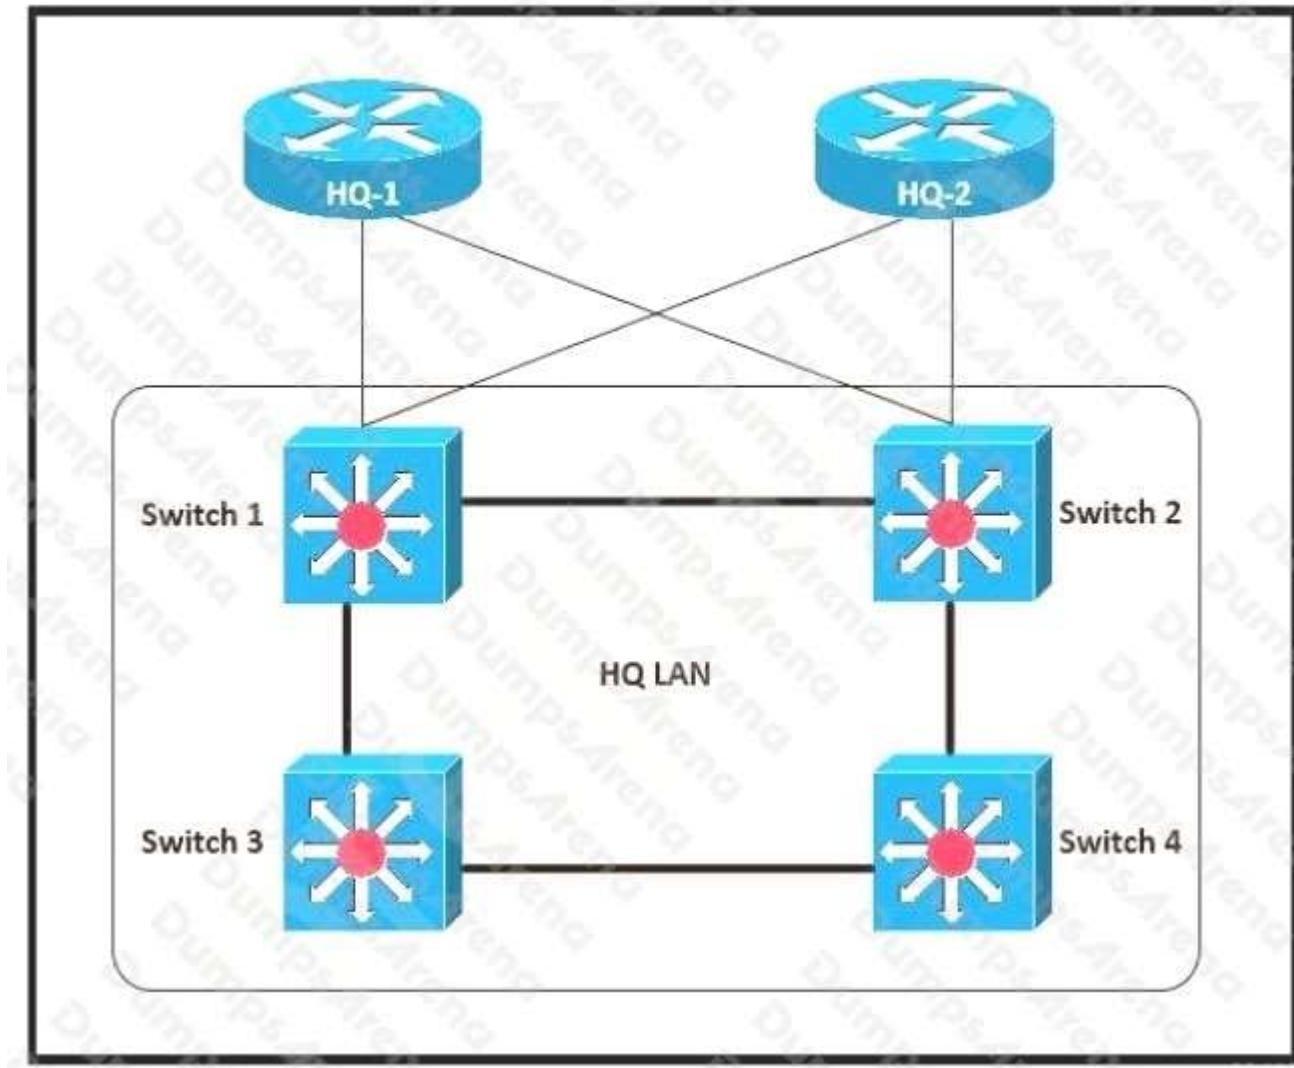

Refer to the exhibit. After the election process, what is the root bridge in the HQ LAN?

Switch 1: 0C:E0:38:81:32:58

Switch 2: 0C:0E:15:22:1A:61

Switch 3: 0C:0E:15:1D:3C:9A

Switch 4: 0C:E0:19:A1:4D:16

- A. Switch 1
- B. Switch 2
- C. Switch 3
- D. Switch 4

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 809

An engineer must establish a trunk link between two switches. The neighboring switch is set to trunk or desirable mode.

What action should be taken?

- A. configure switchport nonegotiate
- B. configure switchport mode dynamic desirable

- C. configure switchport mode dynamic auto
- D. configure switchport trunk dynamic desirable

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 810

Which spanning-tree enhancement avoids the learning and listening states and immediately places ports in the forwarding state?

- A. BPDUfilter
- B. PortFast
- C. Backbonefast
- D. BPDUGuard

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 811

How does the dynamically-learned MAC address feature function?

- A. The CAM table is empty until ingress traffic arrives at each port
- B. Switches dynamically learn MAC addresses of each connecting CAM table.
- C. The ports are restricted and learn up to a maximum of 10 dynamically-learned addresses
- D. It requires a minimum number of secure MAC addresses to be filled dynamically

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 812

When using Rapid PVST+, which command guarantees the switch is always the root bridge for VLAN 200?

- A. spanning-tree vlan 200 priority 614440
- B. spanning-tree vlan 200 priority 0
- C. spanning-tree vlan 200 root primary
- D. spanning-tree vlan 200 priority 38813258

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 813

Refer to the exhibit. Which command must be executed for Gi1/1 on SW1 to passively become a trunk port if Gi1/1 on SW2 is configured in desirable or trunk mode?

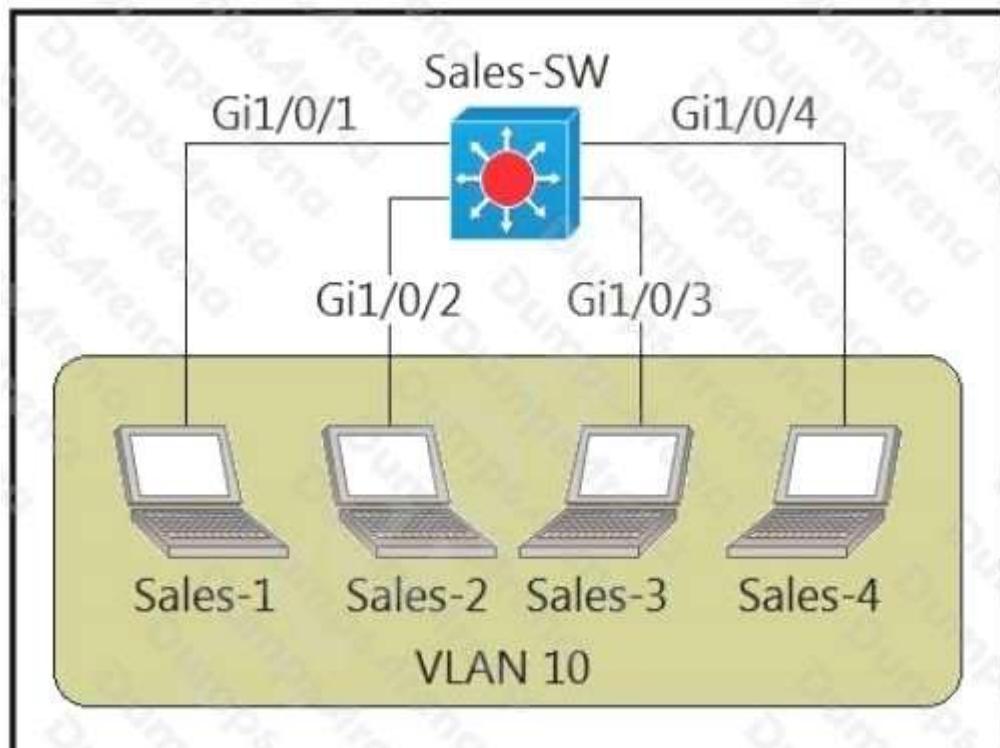

- A. switchport mode dynamic auto
- B. switchport mode dot1-tunnel
- C. switchport mode dynamic desirable
- D. switchport mode trunk

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 814

Refer to the exhibit. The entire contents of the MAC address table are shown. Sales-4 sends a data frame to Sales-1.

Sales-SW#show mac-address-table
Mac Address Table

VLAN	MAC Address	Type	Ports
10	000c.8590.bb7d	DYNAMIC	Gi1/0/1
10	3939.1170.1bb7	DYNAMIC	Gi1/0/2
10	00d0.d3b6.957c	DYNAMIC	Gi1/0/3

Sales-SW#

What does the switch do as it receives the frame from Sales-4?

- A. Map the Layer 2 MAC address to the Layer 3 IP address and forward the frame.
- B. Insert the source MAC address and port into the forwarding table and forward the frame to Sales-1.
- C. Perform a lookup in the MAC address table and discard the frame due to a missing entry.
- D. Flood the frame out of all ports except on the port where Sales-1 is connected.

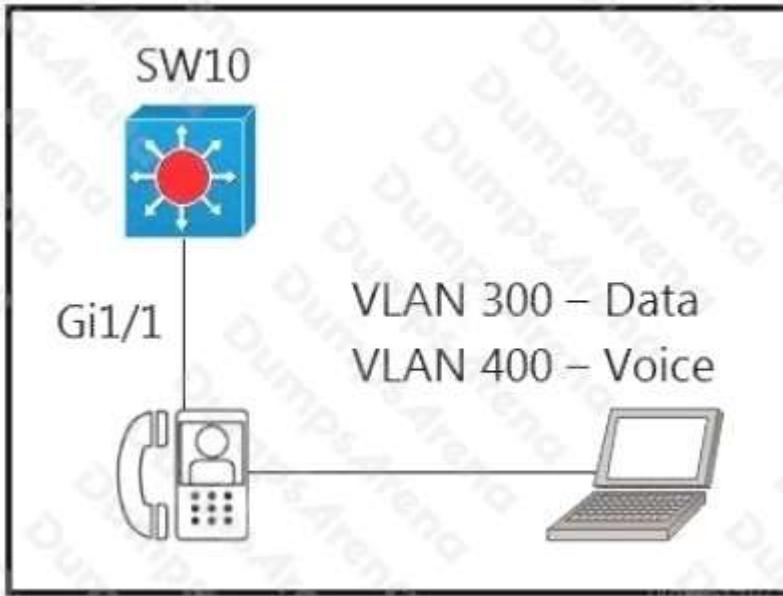

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 815

Refer to the exhibit. An engineer must configure GigabitEthernet1/1 to accommodate voice and data traffic.

Which configuration accomplishes this task?

- A. interface gigabitethernet1/1 switchport mode access switchport access vlan 300 switchport voice vlan 400
- B. interface gigabitethernet1/1 switchport mode trunk switchport trunk vlan 300 switchport trunk vlan 400
- C. interface gigabitethernet1/1 switchport mode access switchport voice vlan 300 switchport access vlan 400
- D. interface gigabitethernet1/1 switchport mode trunk switchport trunk vlan 300 switchport voice vlan 400

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 816

An engineer needs to add an old switch back into a network. To prevent the switch from corrupting the VLAN database, what action must be taken?

- A. Add the switch in the VTP domain with a lower revision number.
- B. Add the switch in the VTP domain with a higher revision number.
- C. Add the switch with DTP set to dynamic desirable.
- D. Add the switch with DTP set to desirable.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 817

Which technology prevents client devices from arbitrarily connecting to the network without state remediation?

- A. 802.11n
- B. 802.1x
- C. MAC Authentication Bypass
- D. IP Source Guard

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 818

Which protocol does an access point use to draw power from a connected switch?

- A. Internet Group Management Protocol
- B. Cisco Discovery Protocol
- C. Adaptive Wireless Path Protocol
- D. Neighbor Discovery Protocol

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 819

An administrator must secure the WLC from receiving spoofed association requests. Which steps must be taken to configure the WLC to restrict the requests and force the user to wait 10 ms to retry an association request?

- A. Enable MAC filtering and set the SA Query timeout to 10.
- B. Enable 802.1x Layer 2 security and set the Comeback timer to 10.
- C. Enable Security Association Teardown Protection and set the SA Query timeout to 10.
- D. Enable the Protected Management Frame service and set the Comeback timer to 10.

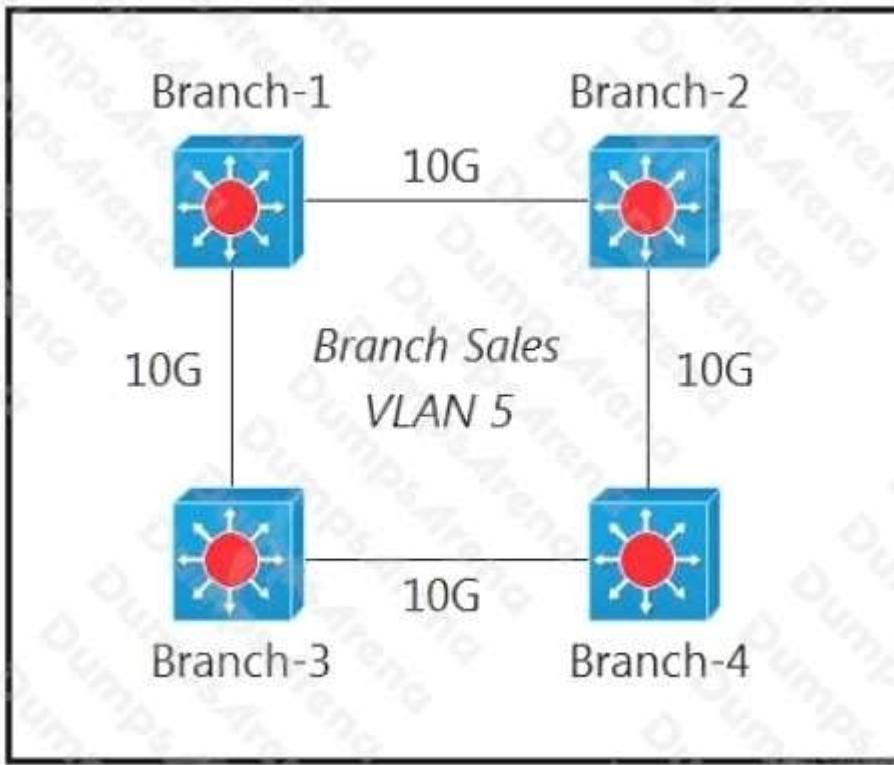

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 820

Refer to the exhibit. Only four switches are participating in the VLAN spanning-tree process.

Branch-1: priority 614440

Branch-2: priority 39391170

Branch-3: priority 0

Branch-4: root primary

Which switch becomes the permanent root bridge for VLAN 5?

- A. Branch-1
- B. Branch-2
- C. Branch-3
- D. Branch-4

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 821

An engineer must configure traffic for a VLAN that is untagged by the switch as it crosses a trunk link. Which command should be used?

- A. switchport trunk encapsulation dot1q
- B. switchport trunk allowed vlan 10

- C. switchport mode trunk
- D. switchport trunk native vlan 10

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 822

What are two benefits of using the PortFast feature? (Choose two.)

- A. Enabled interfaces are automatically placed in listening state.
- B. Enabled interfaces wait 50 seconds before they move to the forwarding state.
- C. Enabled interfaces never generate topology change notifications.
- D. Enabled interfaces come up and move to the forwarding state immediately.
- E. Enabled interfaces that move to the learning state generate switch topology change notifications.

Correct Answer: CD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 823

What is the benefit of configuring PortFast on an interface?

- A. The frames entering the interface are marked with the higher priority and then processed faster by a switch.
- B. After the cable is connected, the interface is available faster to send and receive user data.
- C. Real-time voice and video frames entering the interface are processed faster.
- D. After the cable is connected, the interface uses the fastest speed setting available for that cable type.

Correct Answer: B

Explanation

Explanation/Reference:

QUESTION 824

DRAG DROP

Drag and drop the functions of AAA supporting protocols from the left onto the protocols on the right.

Select and Place:

encrypts only the password when it sends an access request

encrypts the entire body of the access-request packet

separates all three AAA operations

combines authentication and authorization

uses TCP

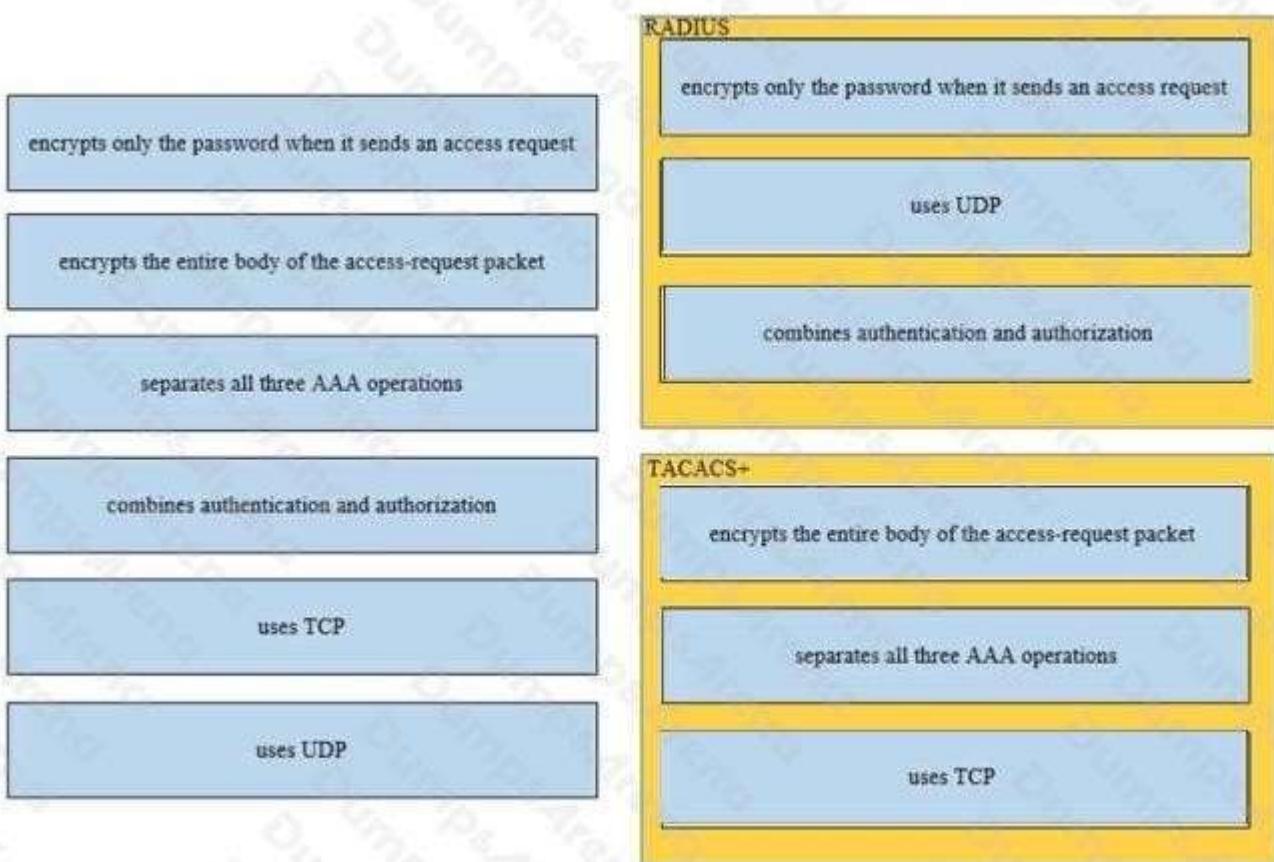

uses UDP

RADIUS

TACACS+

Answer:

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 825

Why does a switch flood a frame to all ports?

- A. The frame has zero destination MAC addresses.
- B. The destination MAC address of the frame is unknown.
- C. The source MAC address of the frame is unknown
- D. The source and destination MAC addresses of the frame are the same.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 826

An engineer configures interface Gi1/0 on the company PE router to connect to an ISP. Neighbor discovery is

disabled.

```
interface Gi1/0
description HQ_DC3992-38488
duplex full
speed 100
negotiation auto
lldp transmit
lldp receive
```

Which action is necessary to complete the configuration if the ISP uses third-party network devices?

- A. Disable autonegotiation.
- B. Enable LLDP globally.
- C. Enable LLDP-MED on the ISP device.
- D. Disable Cisco Discovery Protocol on the interface.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 827

DRAG DROP

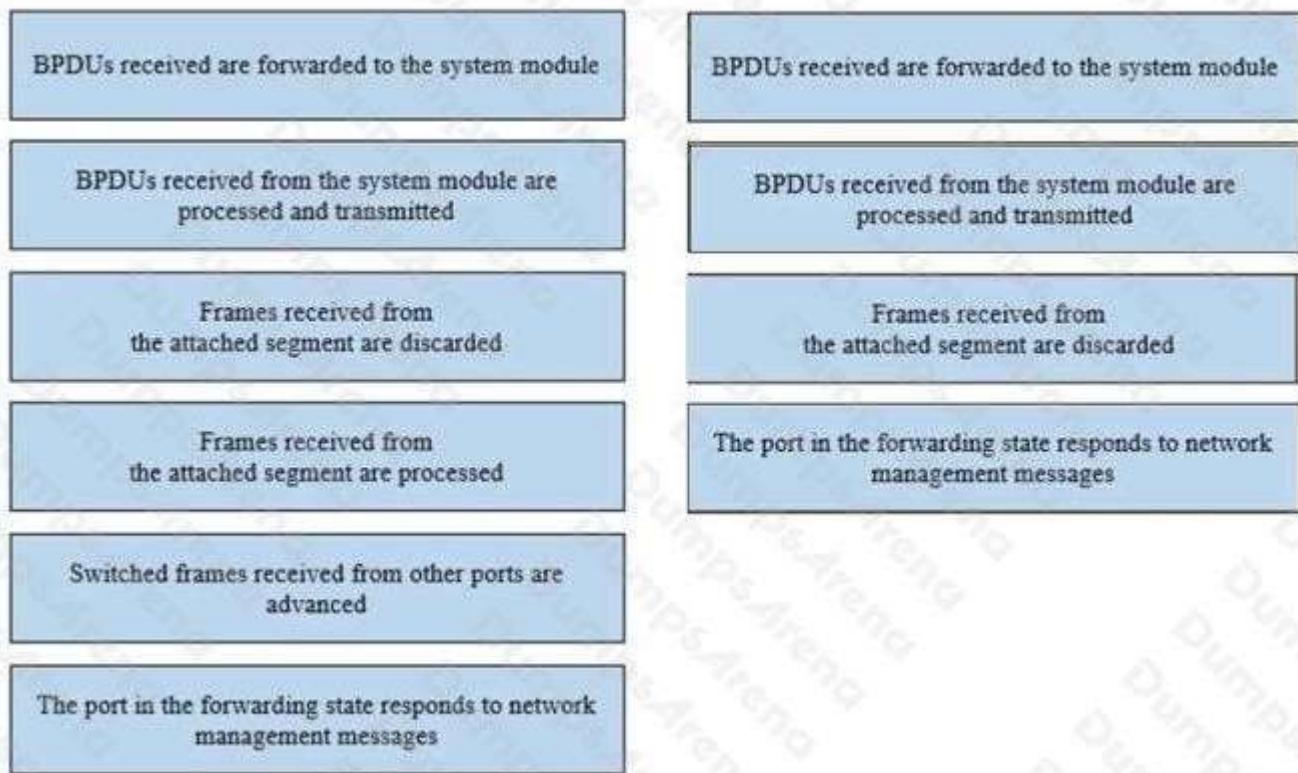

Drag and drop the Rapid PVST+ forwarding state actions from the left to the right. Not all actions are used.

Select and Place:

BPDUs received are forwarded to the system module	action
BPDUs received from the system module are processed and transmitted	action
Frames received from the attached segment are discarded	action
Frames received from the attached segment are processed	action
Switched frames received from other ports are advanced	
The port in the forwarding state responds to network management messages	

Answer:

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 828

Which access point mode relies on a centralized controller for management, roaming, and SSID configuration?

- A. lightweight mode
- B. autonomous mode
- C. bridge mode
- D. repeater mode

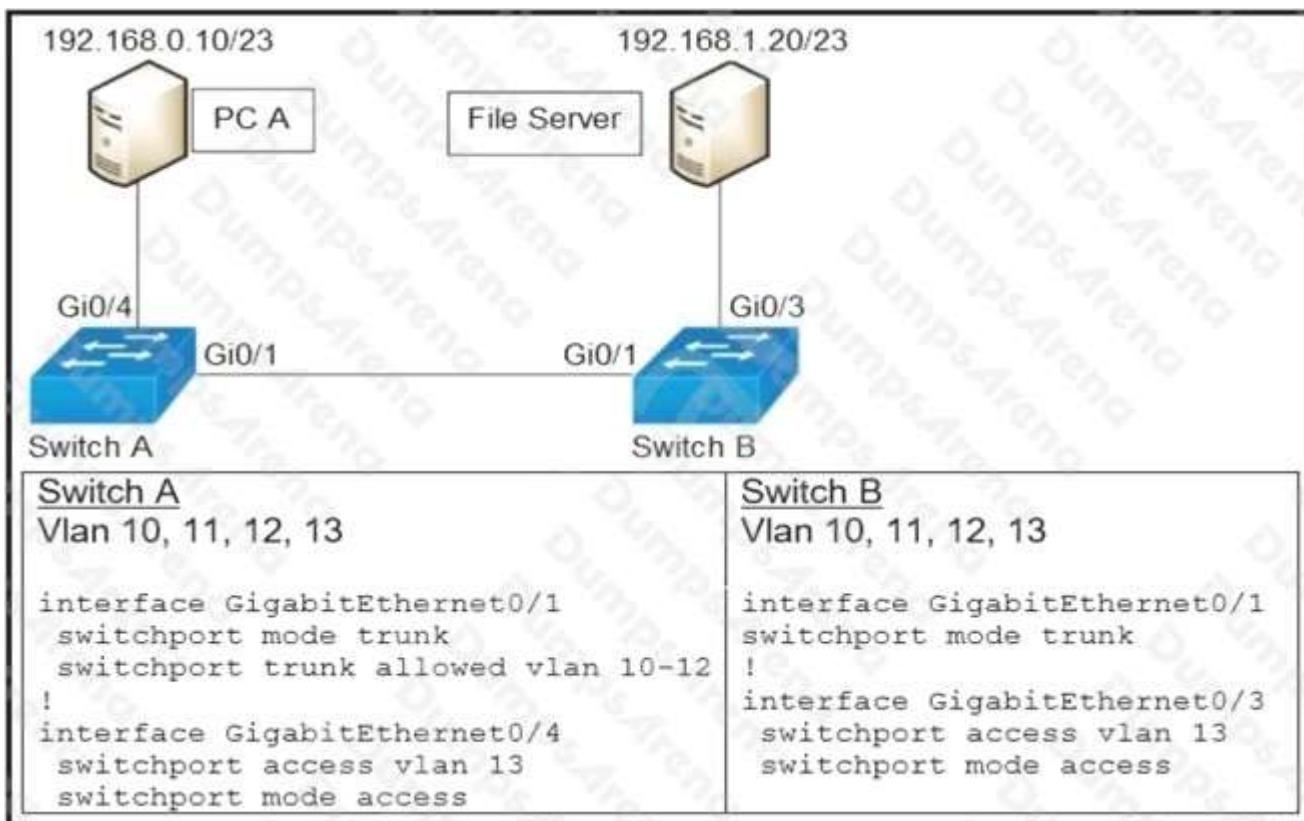

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 829

Refer to the exhibit. A network engineer must configure communication between PC A and the File Server. To prevent interruption for any other communications, which command must be configured?

- A. switchport truck allowed vlan 12
- B. switchport truck allowed vlan none
- C. switchport truck allowed vlan add 13
- D. switchport truck allowed vlan remove 10-11

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 830

```
switch(config)#interface gigabitEthernet 1/11
switch(config-if)#switchport mode access
switch(config-if)#spanning-tree portfast
switch(config-if)#spanning-tree bpduguard enable
```

Refer to the exhibit. What is the result if Gig1/11 receives an STP BPDU?

- A. The port transitions to STP blocking.
- B. The port immediately transitions to STP forwarding.
- C. The port goes into error-disable state.
- D. The port transitions to the root port.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 831

Which access layer threat-mitigation technique provides security based on identity?

- A. Dynamic ARP Inspection
- B. DHCP snooping
- C. 802.1x
- D. using a non-default native VLAN

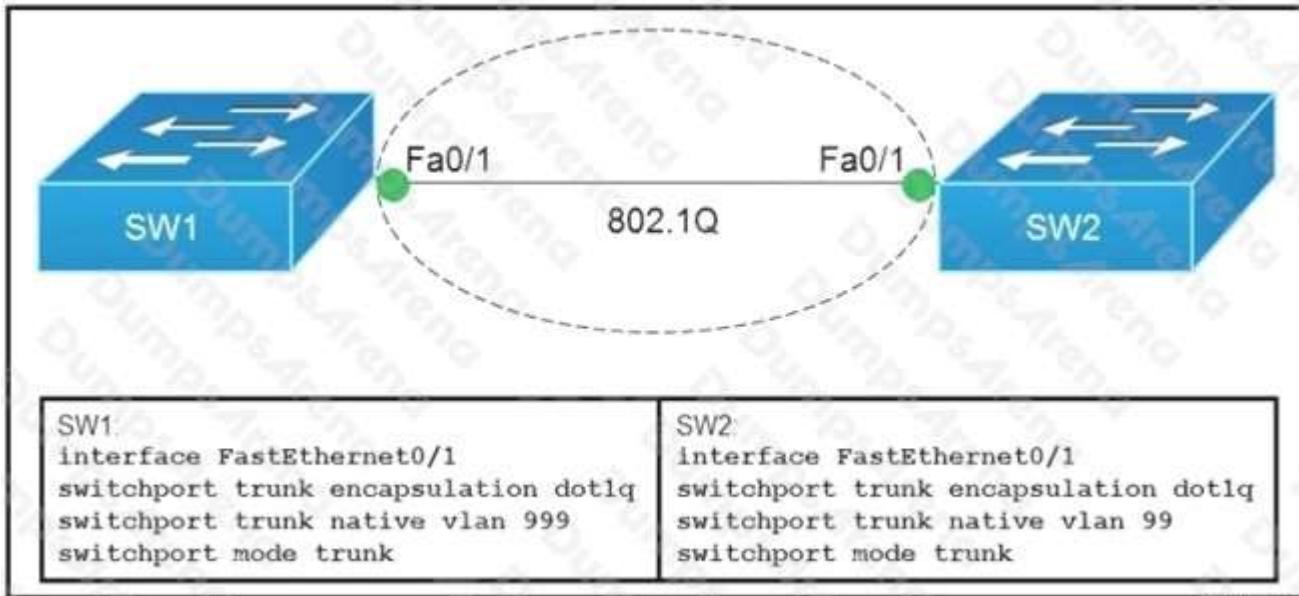

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 832

Refer to the exhibit. Which action do the switches take on the trunk link?

- A. The trunk does not form, and the ports go into an err-disabled status.
- B. The trunk forms, but the mismatched native VLANs are merged into a single broadcast domain.
- C. The trunk forms, but VLAN 99 and VLAN 999 are in a shutdown state.
- D. The trunk does not form, but VLAN 99 and VLAN 999 are allowed to traverse the link.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

The trunk still forms with mismatched native VLANs and the traffic can actually flow between mismatched switches. But it is absolutely necessary that the native VLANs on both ends of a trunk link match; otherwise a native VLAN mismatch occurs, causing the two VLANs to effectively merge. For example with the above configuration, SW1 would send untagged frames for VLAN 999. SW2 receives them but would think they are for VLAN 99 so we can say these two VLANs are merged.

QUESTION 833

A network engineer must configure two new subnets using the address block 10.70.128.0/19 to meet these requirements:

The first subnet must support 24 hosts.

The second subnet must support 472 hosts.

Both subnets must use the longest subnet mask possible from the address block.

Which two configurations must be used to configure the new subnets and meet a requirement to use the first available address in each subnet for the router interfaces? (Choose two.)

- A. interface vlan 1148 ip address 10.70.148.1 255.255.254.0
- B. interface vlan 3002 ip address 10.70.147.17 255.255.255.224
- C. interface vlan 4722 ip address 10.70.133.17 255.255.255.192
- D. interface vlan 1234 ip address 10.70.159.1 255.255.254.0
- E. interface vlan 155 ip address 10.70.155.65 255.255.255.224

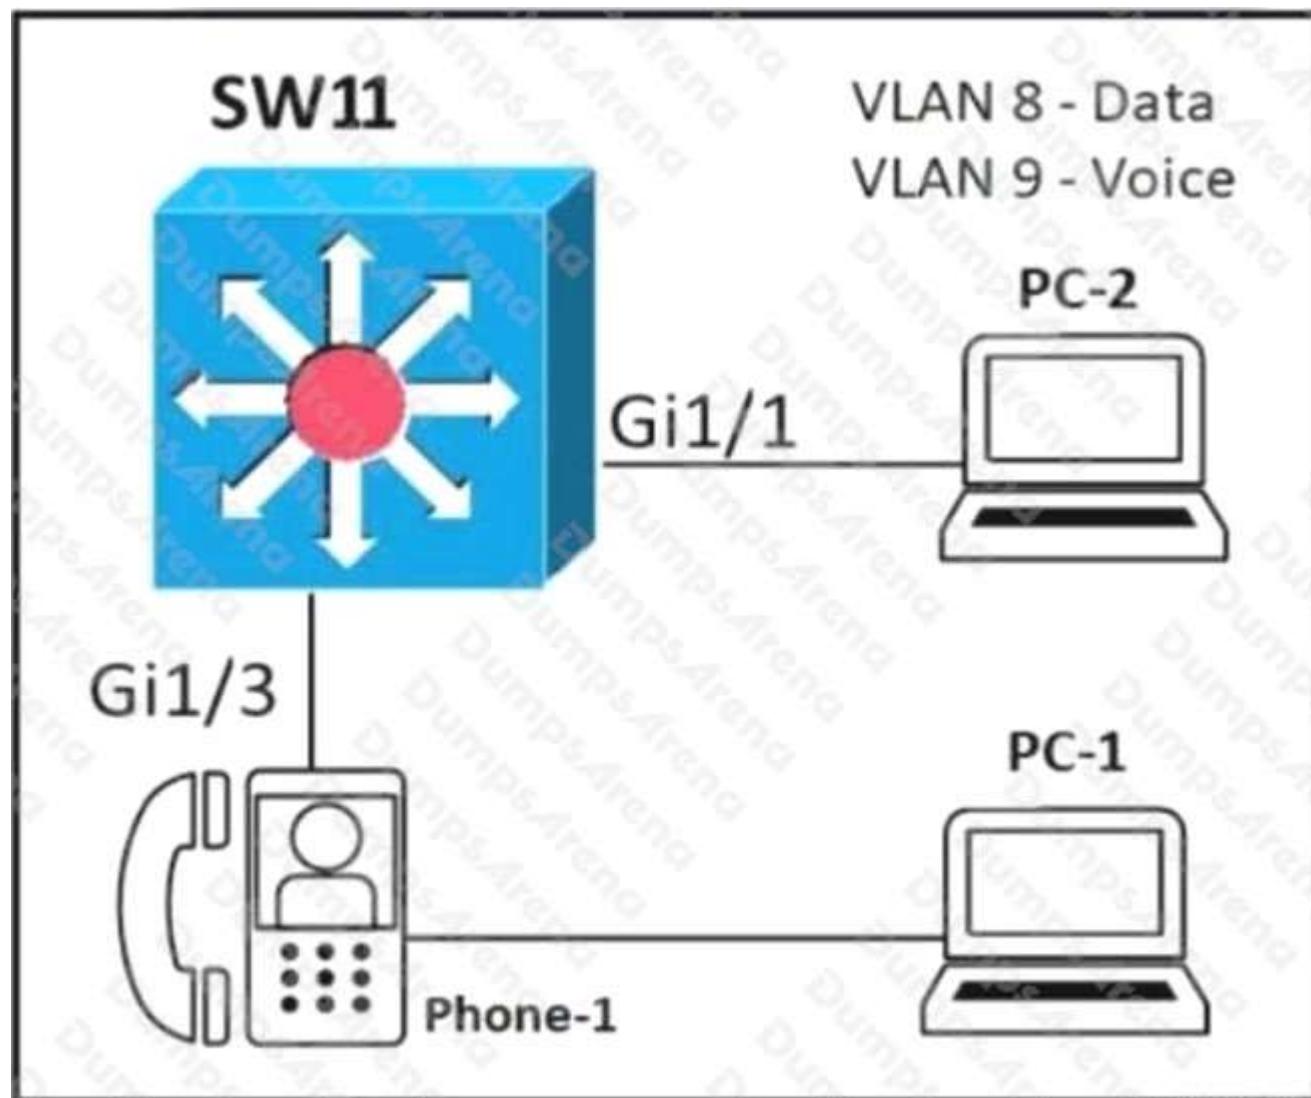

Correct Answer: AE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 834

Refer to the exhibit. An administrator must configure interfaces Gi1/1 and Gi1/3 on switch SW11. PC-1 and PC-2 must be placed in the Data VLAN, and Phone-1 must be placed in the Voice VLAN. Which configuration meets these requirements?

- A. interface gigabitethernet1/1 switchport mode access switchport access vlan 8 !

interface gigabitethernet1/3 switchport mode access switchport access vlan 8 switchport voice vlan 9
- B. interface gigabitethernet1/1 switchport mode access switchport access vlan 8 !

interface gigabitethernet1/3 switchport mode trunk switchport trunk vlan 8 switchport voice vlan 9
- C. interface gigabitethernet1/1 switchport mode access switchport access vlan 9 !

interface gigabitethernet1/3 switchport mode trunk switchport trunk vlan 8 switchport trunk vlan 9
- D. interface gigabitethernet1/1 switchport mode access switchport access vlan 8 !

interface gigabitethernet1/3 switchport mode access switchport voice vlan 8 switchport access vlan 9

Correct Answer: A

QUESTION 845

EIGRP: 192.168.12.0/24

RIP: 192.168.12.0/27

OSPF: 192.168.12.0/28

Refer to the exhibit. How does the router manage traffic to 192.168.12.16?

- A. It chooses the EIGRP route because it has the lowest administrative distance.
- B. It load-balances traffic between all three routes.
- C. It chooses the OSPF route because it has the longest prefix inclusive of the destination address.
- D. It selects the RIP route because it has the longest prefix inclusive of the destination address.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 846

What are two reasons for an engineer to configure a floating static route? (Choose two.)

- A. to enable fallback static routing when the dynamic routing protocol fails
- B. to route traffic differently based on the source IP of the packet
- C. to automatically route traffic on a secondary path when the primary path goes down
- D. to support load balancing via static routing
- E. to control the return path of traffic that is sent from the router

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 847

```
R1# show ip route
```

D	192.168.10.0/24	[90/2679326] via 192.168.1.1
R	192.168.10.0/27	[120/3] via 192.168.1.2
O	192.168.10.0/23	[110/2] via 192.168.1.3
i L1	192.168.10.0/13	[115/30] via 192.168.1.4

Refer to the exhibit. How does router R1 handle traffic to 192.168.10.16?

- A. It selects the IS-IS route because it has the shortest prefix inclusive of the destination address
- B. It selects the RIP route because it has the longest prefix inclusive of the destination address
- C. It selects the OSPF route because it has the lowest cost
- D. It selects the EIGRP route because it has the lowest administrative distance

Correct Answer: B

QUESTION 849

Refer to the exhibit. To which device does Router1 send packets that are destined to host 10.10.13.165?

- A. Router2
- B. Router3
- C. Router4
- D. Router5

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 850

R1 has learned route 10.10.10.0/24 via numerous routing protocols. Which route is installed?

- A. route with the next hop that has the highest IP
- B. route with the lowest cost
- C. route with the lowest administrative distance
- D. route with the shortest prefix length

Correct Answer: C

Section: (none)
Explanation

Explanation/Reference:

QUESTION 851

Which two minimum parameters must be configured on an active interface to enable OSPFv2 to operate?
(Choose two.)

- A. OSPF process ID
- B. OSPF MD5 authentication key
- C. OSPF stub flag
- D. IPv6 address
- E. OSPF area

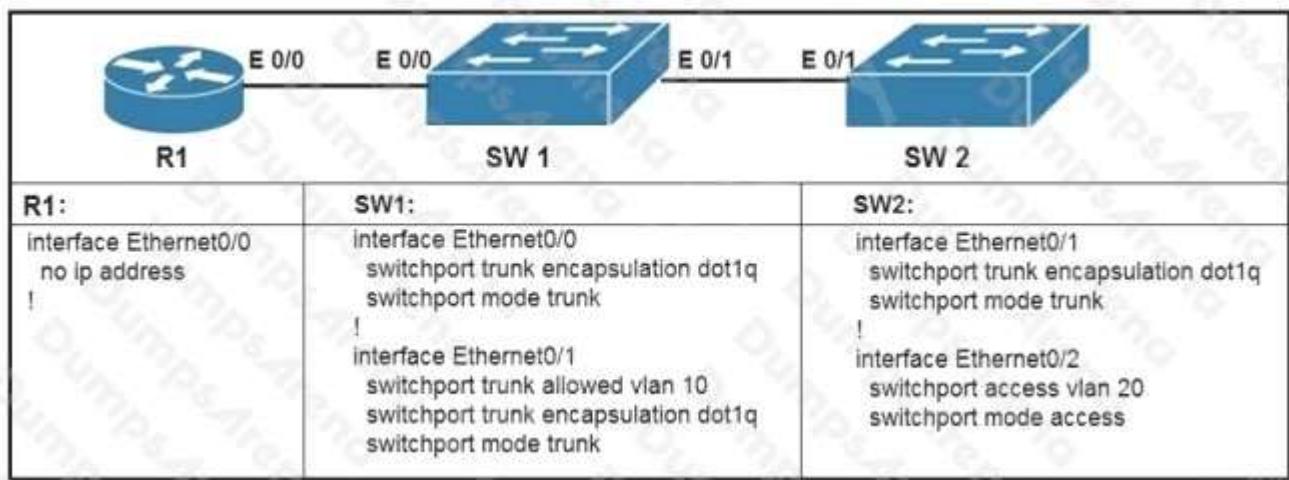

Correct Answer: AE

Section: (none)
Explanation

Explanation/Reference:

QUESTION 852

Refer to the exhibit. What commands are needed to add a subinterface to Ethernet0/0 on R1 to allow for VLAN 20, with IP address 10.20.20.1/24?

- A. R1(config)#interface ethernet0/0
R1(config-if)#encapsulation dot1q 20
R1(config-if)#ip address 10.20.20.1 255.255.255.0
- B. R1(config)#interface ethernet0/0.20
R1(config-if)#encapsulation dot1q 20
R1(config-if)#ip address 10.20.20.1 255.255.255.0
- C. R1(config)#interface ethernet0/0.20
R1(config-if)#ip address 10.20.20.1 255.255.255.0
- D. R1(config)#interface ethernet0/0

```
R1(config-if)#ip address 10.20.20.1 255.255.255.0
```

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 853

```
R1#show ip interface brief
Interface          IP-Address      OK? Method    Status          Protocol
FastEthernet0/0    unassigned      YES NVRAM    administratively down  down
GigabitEthernet1/0 192.168.0.1    YES NVRAM    up             up
GigabitEthernet2/0 10.10.1.10    YES manual   up             up
GigabitEthernet3/0 10.10.10.20   YES manual   up             up
GigabitEthernet4/0 unassigned      YES NVRAM    administratively down  down
Loopback0          172.16.15.10   YES manual   manual        up
```

Refer to the exhibit. What does router R1 use as its OSPF router-ID?

- A. 10.10.1.10
- B. 10.10.10.20
- C. 172.16.15.10
- D. 192.168.0.1

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

OSPF uses the following criteria to select the router ID:

1. Manual configuration of the router ID (via the "router-id x.x.x.x" command under OSPF router configuration mode).
2. Highest IP address on a loopback interface.
3. Highest IP address on a non-loopback and active (no shutdown) interface.

QUESTION 854

Refer to the exhibit. The loopback1 interface of the Atlanta router must reach the loopback3 interface of the Washington router. Which two static host routes must be configured on the New York router? (Choose two.)

- A. ipv6 route 2000::3/128 s0/0/0
- B. ipv6 route 2000::1/128 s0/0/1
- C. ipv6 route 2000::1/128 2012::1
- D. ipv6 route 2000::1/128 2012::2
- E. ipv6 route 2000::3/128 2023::3

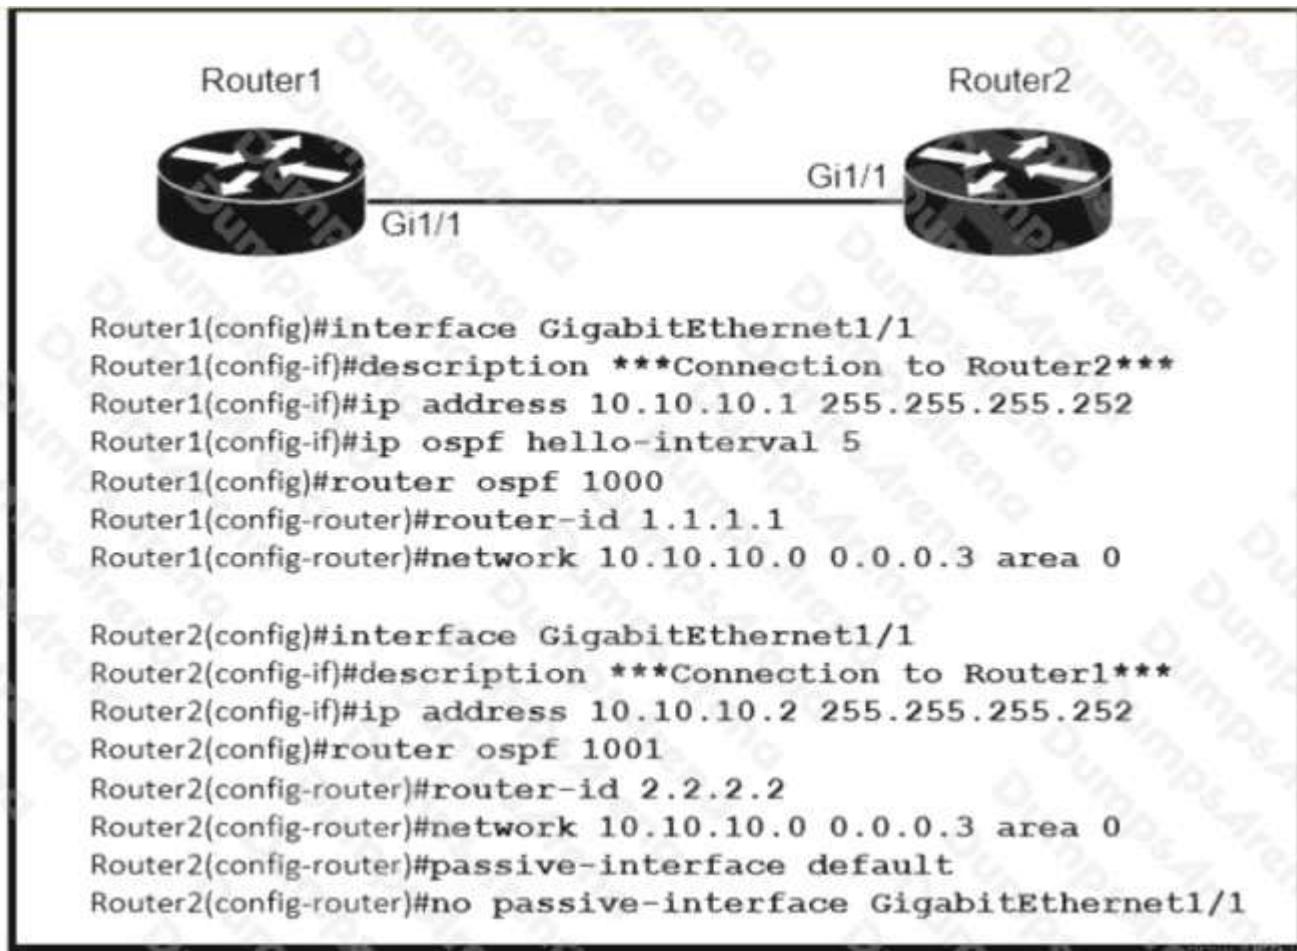

Correct Answer: CE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 855

Refer to the exhibit. After the configuration is applied, the two routers fail to establish an OSPF neighbor relationship. What is the reason for the problem?

- A. The OSPF process IDs are mismatched

- B. The network statement on Router1 is misconfigured
- C. Router2 is using the default hello timer
- D. The OSPF router IDs are mismatched

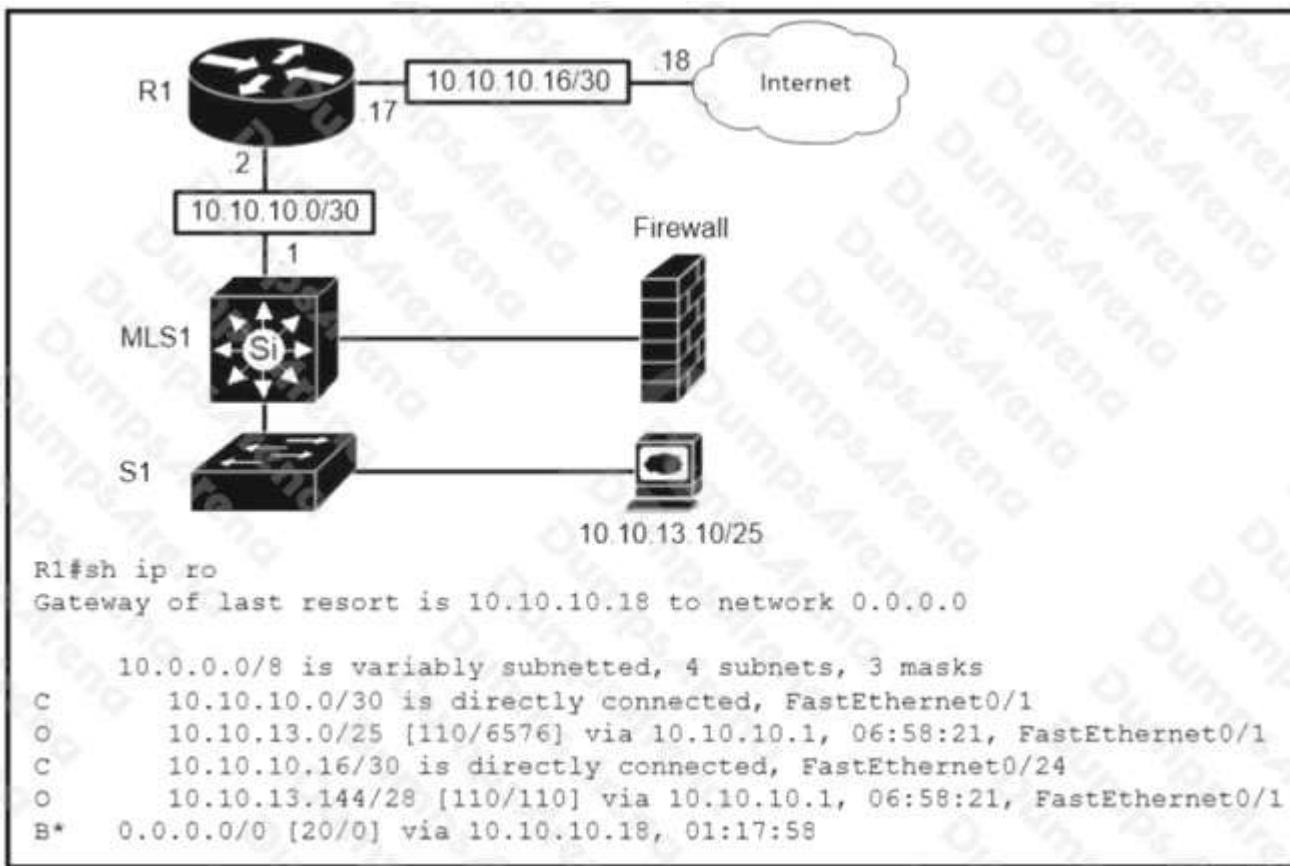

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 856

Refer to the exhibit. Which route type is configured to reach the Internet?

- A. floating static route
- B. host route
- C. network route
- D. default route

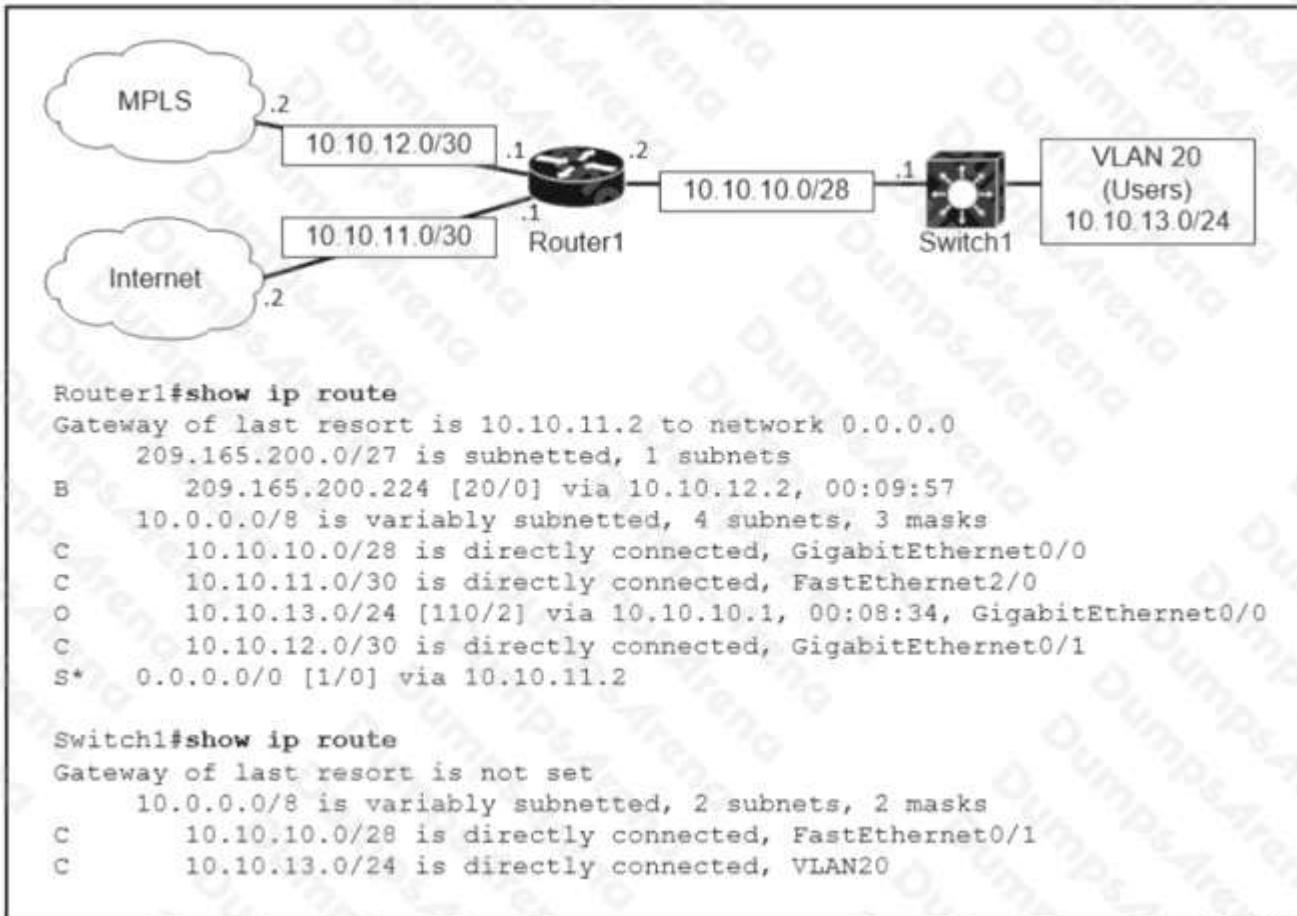

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 857

Refer to the exhibit. Which path is used by the router for Internet traffic?

- A. 209.165.200.0/27
- B. 0.0.0.0/0
- C. 10.10.13.0/24
- D. 10.10.10.0/28

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 858

When OSPF learns multiple paths to a network, how does it select a route?

- A. For each existing interface, it adds the metric from the source router to the destination to calculate the route with the lowest bandwidth.
- B. It counts the number of hops between the source router and the destination to determine the route with the lowest metric.
- C. It divides a reference bandwidth of 100 Mbps by the actual bandwidth of the exiting interface to calculate the route with the lowest cost.
- D. It multiplies the active K values by 256 to calculate the route with the lowest metric.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 859

When a floating static route is configured, which action ensures that the backup route is used when the primary route fails?

- A. The administrative distance must be higher on the primary route so that the backup route becomes secondary.
- B. The default-information originate command must be configured for the route to be installed into the routing table.
- C. The floating static route must have a lower administrative distance than the primary route so it is used as a backup.
- D. The floating static route must have a higher administrative distance than the primary route so it is used as a backup

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 860

Designated Router (ID) 10.11.11.11, Interface address 10.10.10.1

Backup Designated router (ID) 10.3.3.3, Interface address 10.10.10.3

Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
oob-resync timeout 40

Hello due in 00:00:08

Supports Link-local Signaling (LLS)

Cisco NSF helper support enabled

IETF NSF helper support enabled

Index 1/1/1, flood queue length 0

Next 0x0(0)/0x0(0)/0x0(0)

Last flood scan length is 1, maximum is 6

Last flood scan time is 0 msec, maximum is 1 msec

Neighbor Count is 3, Adjacent neighbor count is 3

Adjacent with neighbor 10.1.1.4

Adjacent with neighbor 10.2.2.2

Adjacent with neighbor 10.3.3.3 (Backup Designated Router)

Suppress hello for 0 neighbor(s)

Refer to the exhibit. The show ip ospf interface command has been executed on R1. How is OSPF configured?

- A. A point-to-point network type is configured.
- B. The interface is not participating in OSPF.
- C. The default Hello and Dead timers are in use.
- D. There are six OSPF neighbors on this interface.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

From the output we can see there are Designated Router & Backup Designated Router for this OSPF domain so this is a broadcast network (point-to-point and point-to-multipoint networks do not elect DR & BDR).

By default, the timers on a broadcast network (Ethernet, point-to-point and point-to-multipoint) are 10 seconds hello and 40 seconds dead. The timers on a non-broadcast network are 30 seconds hello 120 seconds dead.

From the line "Neighbor Count is 3", we learn there are four OSPF routers in this OSPF domain.

Reference: <https://www.cisco.com/c/en/us/support/docs/ip/open-shortest-path-first-ospf/13689-17.html>

QUESTION 861

A user configured OSPF and advertised the Gigabit Ethernet interface in OSPF. By default, to which type of OSPF network does this interface belong?

- A. point-to-multipoint
- B. point-to-point
- C. broadcast
- D. nonbroadcast

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

The Broadcast network type is the default for an OSPF enabled ethernet interface (while Point-to-Point is the default OSPF network type for Serial interface with HDLC and PPP encapsulation).

Reference: <https://www.oreilly.com/library/view/cisco-ios-cookbook/0596527225/ch08s15.html>

QUESTION 862

Which attribute does a router use to select the best path when two or more different routes to the same destination exist from two different routing protocols?

- A. dual algorithm
- B. metric
- C. administrative distance
- D. hop count

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Administrative distance is the feature used by routers to select the best path when there are two or more different routes to the same destination from different routing protocols. Administrative distance defines the reliability of a routing protocol.

QUESTION 863

Router A learns the same route from two different neighbors; one of the neighbor routers is an OSPF neighbor, and the other is an EIGRP neighbor.

What is the administrative distance of the route that will be installed in the routing table?

- A. 20
- B. 90
- C. 110
- D. 115

Correct Answer: B

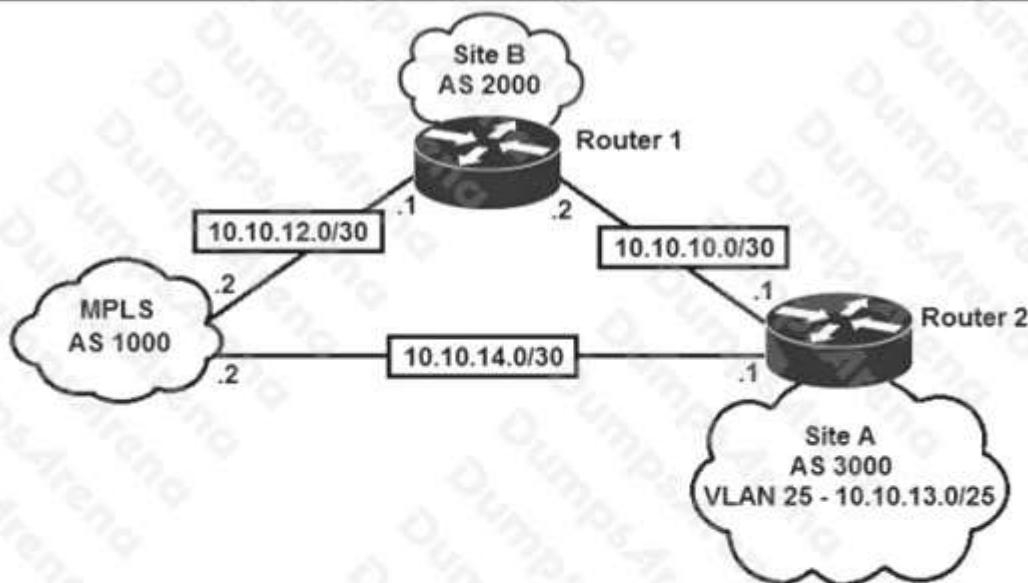

Section: (none)

Explanation

Explanation/Reference:

The Administrative distance (AD) of EIGRP is 90 while the AD of OSPF is 110 so EIGRP route will be chosen to install into the routing table.

QUESTION 864

```
Router1#show ip route
Gateway of last resort is 10.10.11.2 to network 0.0.0.0
  10.0.0.0/8 is variably subnetted, 8 subnets, 4 masks
C    10.10.10.0/28 is directly connected, GigabitEthernet0/0
C    10.10.11.0/30 is directly connected, FastEthernet2/0
O    10.10.13.0/25 [110/2] via 10.10.10.1, 00:00:17, GigabitEthernet0/0
O    10.10.13.128/28 [110/2] via 10.10.10.1, 00:33:38, GigabitEthernet0/0
O    10.10.13.144/28 [110/2] via 10.10.10.1, 00:33:38, GigabitEthernet0/0
O    10.10.13.160/29 [110/2] via 10.10.10.1, 00:33:38, GigabitEthernet0/0
O    10.10.13.208/29 [110/2] via 10.10.10.1, 00:33:39, GigabitEthernet0/0
O    10.10.13.252/30 [110/2] via 10.10.10.1, 00:33:39, GigabitEthernet0/0
S*   0.0.0.0/0 [1/0] via 10.10.11.2
```

Refer to the exhibit. An engineer is bringing up a new circuit to the MPLS provider on the Gi0/1 interface of Router 1. The new circuit uses eBGP and learns the route to VLAN25 from the BGP path.

What is the expected behavior for the traffic flow for route 10.10.13.0/25?

- A. Traffic to 10.10.13.0/25 is load balanced out of multiple interfaces.
- B. Traffic to 10.10.13.0/25 is asymmetrical.
- C. Route 10.10.13.0/25 is updated in the routing table as being learned from interface Gi0/1.
- D. Route 10.10.13.0/25 learned via the Gi0/0 interface remains in the routing table.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

The AD of eBGP (20) is smaller than that of OSPF (110) so the route to 10.10.13.0/25 will be updated as being learned from the new BGP path.

QUESTION 865

Which two actions influence the EIGRP route selection process? (Choose two.)

- A. The advertised distance is calculated by a downstream neighbor to inform the local router of the bandwidth on the link.
- B. The router calculates the feasible distance of all paths to the destination route.
- C. The router must use the advertised distance as the metric for any given route.
- D. The router calculates the best backup path to the destination route and assigns it as the feasible successor.
- E. The router calculates the reported distance by multiplying the delay on the exiting interface by 256.

Correct Answer: BD

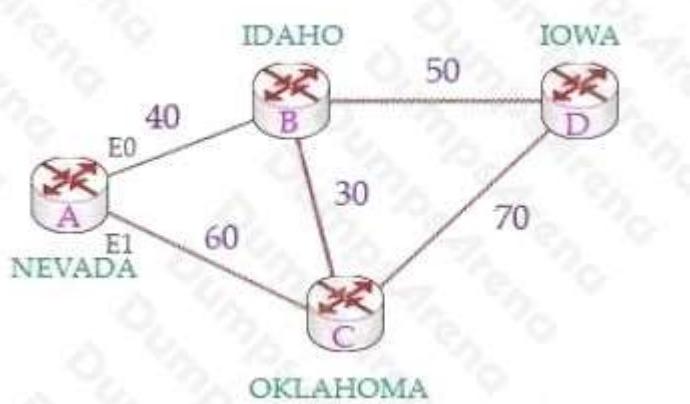

Section: (none)

Explanation

Explanation/Reference:

The reported distance (or advertised distance) is the cost from the neighbor to the destination. It is calculated from the router advertising the route to the network. For example in the topology below, suppose router A & B are exchanging their routing tables for the first time. Router B says "Hey, the best metric (cost) from me to IOWA is 50 and the metric from you to IOWA is 90" and advertises it to router

- A. Router A considers the first metric (50) as the Advertised distance. The second metric (90), which is from NEVADA to IOWA (through IDAHO), is called the Feasible distance.

The reported distance is calculated in the same way of calculating the metric. By default (K1 = 1, K2 = 0, K3 = 1, K4 = 0, K5 = 0), the metric is calculated as follows:

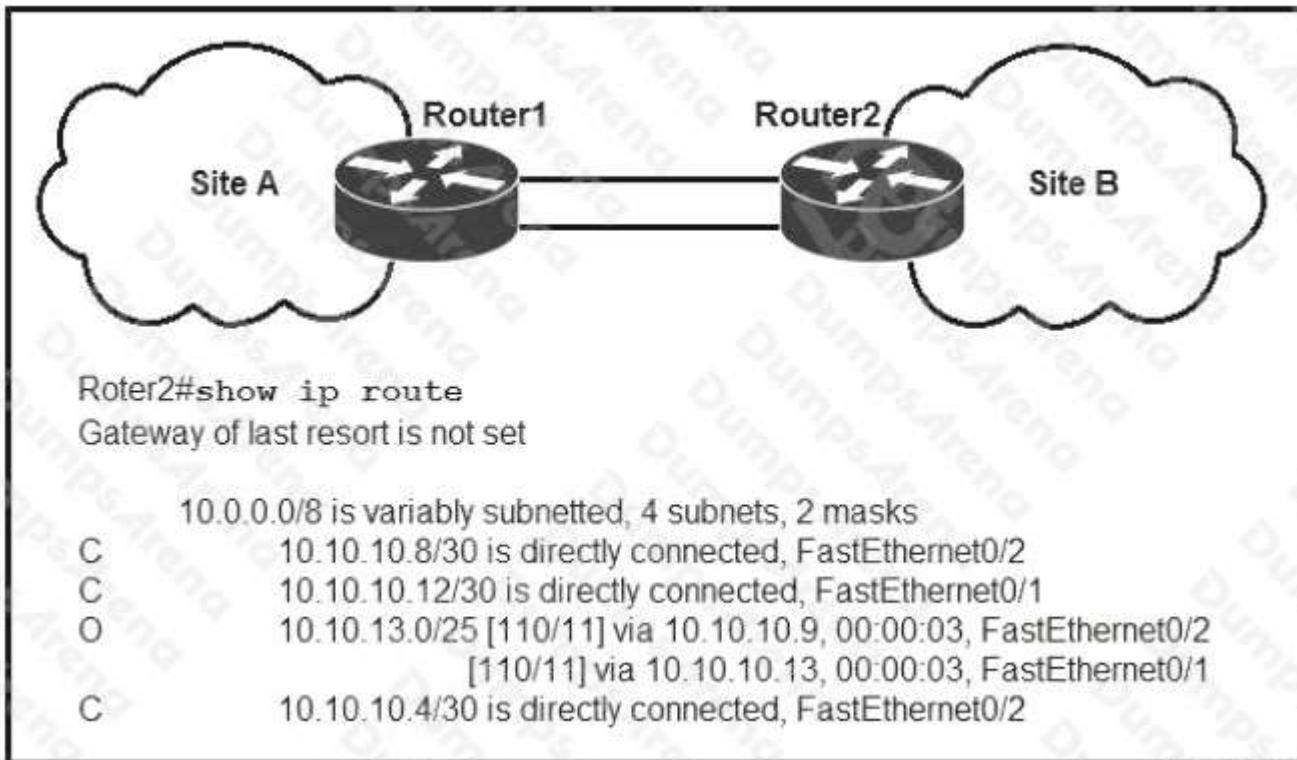

$$\text{metric} = \left[\frac{10,000,000}{\text{slowest bandwidth[in kbps]}} + \frac{\text{sum of delay[in } \mu\text{sec}]}{10} \right] * 256$$

Feasible successor is the backup route. To be a feasible successor, the route must have an Advertised distance (AD) less than the Feasible distance (FD) of the current successor route.

Feasible distance (FD): The sum of the AD plus the cost between the local router and the next-hop router. The router must calculate the FD of all paths to choose the best path to put into the routing table.

Note: Although the new CCNA exam does not have EIGRP topic but you should learn the basic knowledge of this routing protocol.

QUESTION 866

Refer to the exhibit. If OSPF is running on this network, how does Router2 handle traffic from Site B to 10.10.13.128/25 at Site A?

- A. It sends packets out of interface Fa0/1 only.
- B. It sends packets out of interface Fa0/2 only.
- C. It load-balances traffic out of Fa0/1 and Fa0/2.
- D. It cannot send packets to 10.10.13.128/25.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Router2 does not have an entry for the subnet 10.10.13.128/25. It only has an entry for 10.10.13.0/25, which ranges from 10.10.13.0 to 10.10.13.127.

QUESTION 867

Which two outcomes are predictable behaviors for HSRP? (Choose two.)

- A. The two routers negotiate one router as the active router and the other as the standby router.
- B. The two routers share the same interface IP address, and default gateway traffic is load-balanced between them.
- C. The two routers synchronize configurations to provide consistent packet forwarding.
- D. Each router has a different IP address, both routers act as the default gateway on the LAN, and traffic is load-balanced between them.
- E. The two routers share a virtual IP address that is used as the default gateway for devices on the LAN.

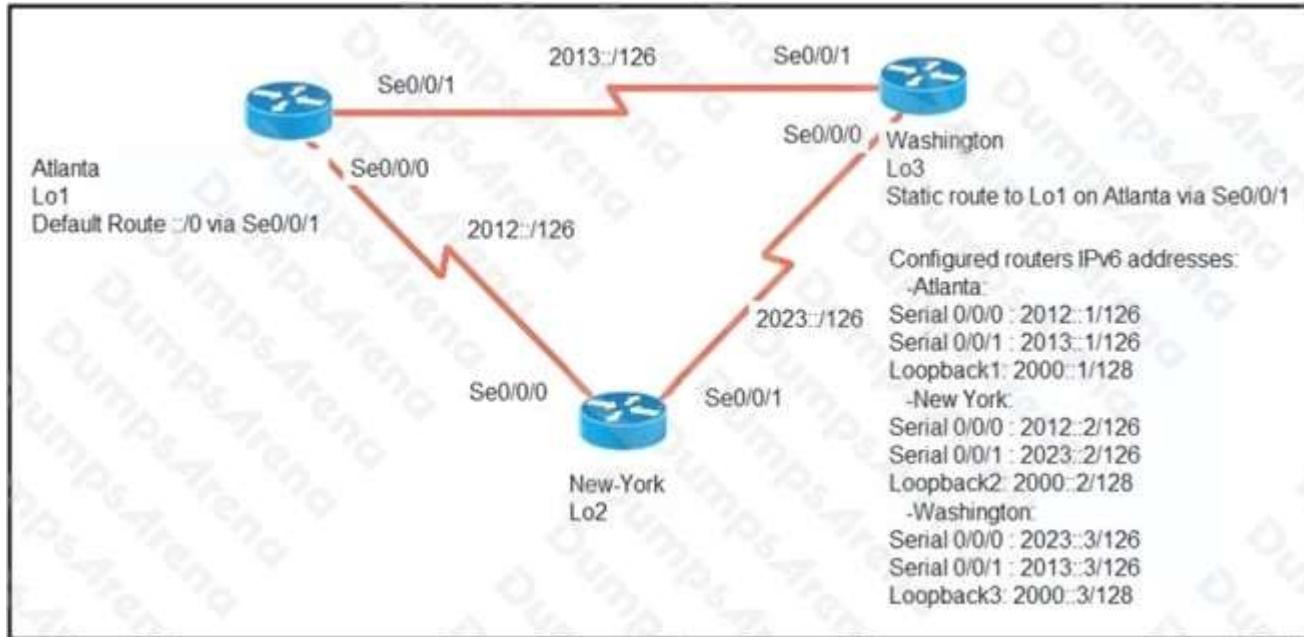

Correct Answer: AE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 868

Refer to the exhibit. An engineer is configuring the New York router to reach the Lo1 interface of the Atlanta router using interface Se0/0/0 as the primary path. Which two commands must be configured on the New York router so that it reaches the Lo1 interface of the Atlanta router via Washington when the link between New York and Atlanta goes down? (Choose two.)

- A. Ipv6 route 2000::1/128 2012::1
- B. Ipv6 route 2000::1/128 2012::1 5
- C. Ipv6 route 2000::1/128 2012::2
- D. Ipv6 route 2000::1/128 2023::2 5
- E. Ipv6 route 2000::1/128 2023::3 5

Correct Answer: AE

Section: (none)

Explanation

Explanation/Reference:

Floating static routes are static routes that have an administrative distance greater than the administrative distance (AD) of another static route or dynamic routes. By default a static route has an AD of 1 then floating static route must have the AD greater than 1. Floating static route has a manually configured administrative distance greater than that of the primary route and therefore would not be in the routing table until the primary route fails.

QUESTION 869

How does HSRP provide first hop redundancy?

- A. It load-balances Layer 2 traffic along the path by flooding traffic out all interfaces configured with the same VLAN.
- B. It uses a shared virtual MAC and a virtual IP address to a group of routers that serve as the default gateway for hosts on a LAN.

- C. It forwards multiple packets to the same destination over different routed links in the data path.
- D. It load-balances traffic by assigning the same metric value to more than one route to the same destination in the IP routing table.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/ipapp_fhrp/configuration/xe-16/fhp-xe-16-book/fhp-hsrp-mgo.html

QUESTION 870

Refer to the exhibit. Which action establishes the OSPF neighbor relationship without forming an adjacency?

```
R1# sh ip ospf int gig0/0
Gig0/0 is up, line protocol is up
  Internet Address 10.201.24.8/28, Area 1, Attached via Network Statement
  Process ID 100, Router ID 192.168.1.1, Network Type BROADCAST, Cost: 1
  Topology-MTID      Cost      Disabled      Shutdown      Topology Name
      0            1            no            no            Base
  Transmit Delay is 1 sec, State DR, Priority 1
  Designated Router (ID) 192.168.1.1, Interface address 10.201.24.8
  No backup designated router on this network
  Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
    oob-resync timeout 40
    Hello due in 00:00:07

R2#sh ip ospf int gig0/0
gig0/0 is up, line protocol is up
  Internet Address 10.201.24.1/28, Area 1
  Process ID 100, Router ID 172.16.1.1, Network Type BROADCAST, Cost: 1
  Transmit Delay is 1 sec, State DR, Priority 1
  Designated Router (ID) 172.16.1.1, Interface address 10.201.24.1
  No backup designated router on this network
  Timer intervals configured, Hello 20, Dead 80, Wait 80, Retransmit 5
```

- A. modify hello interval
- B. modify process ID
- C. modify priority
- D. modify network type

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 871

Which command must you enter to guarantee that an HSRP router with higher priority becomes the HSRP primary router after it is reloaded?

- A. standby 10 preempt
- B. standby 10 version 1
- C. standby 10 priority 150
- D. standby 10 version 2

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

The "preempt" command enables the HSRP router with the highest priority to immediately become the active router.

QUESTION 872

Which command should you enter to verify the priority of a router in an HSRP group?

- A. show hsrp
- B. show sessions
- C. show interfaces
- D. show standby

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

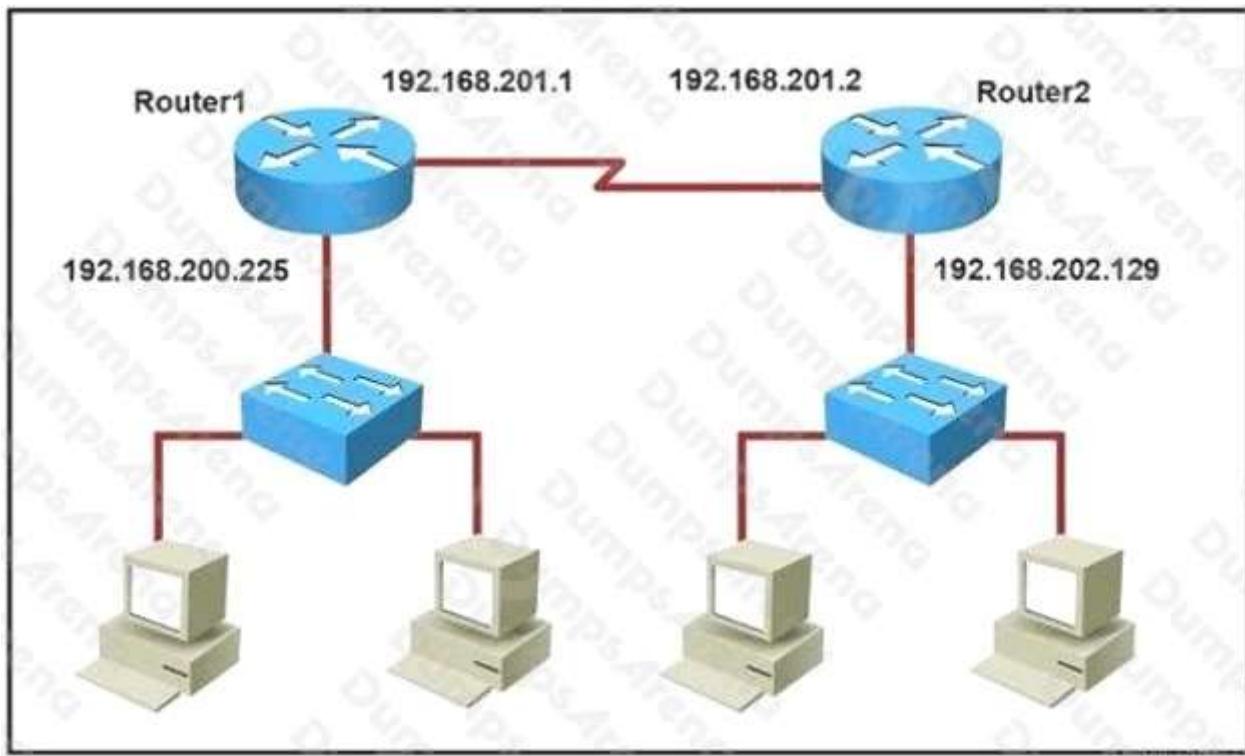

The following is sample output from the show standby command:

```
Router# show standby

Ethernet0/1 - Group 1
  State is Active
    2 state changes, last state change 00:30:59
  Virtual IP address is 10.1.0.20
    Secondary virtual IP address 10.1.0.21
  Active virtual MAC address is 0004.4d82.7981
  Local virtual MAC address is 0004.4d82.7981 (bia)
  Hello time 4 sec, hold time 12 sec
    Next hello sent in 1.412 secs
  Gratuitous ARP 14 sent, next in 7.412 secs
  Preemption enabled, min delay 50 sec, sync delay 40 sec
  Active router is local
  Standby router is 10.1.0.6, priority 75 (expires in 9.184 sec)
  Priority 95 (configured 120)
  Tracking 2 objects, 0 up
    Down Interface Ethernet0/2, pri 15
    Down Interface Ethernet0/3
  Group name is "HSRP1" (cfgd)
  Follow by groups:
    Et1/0.3 Grp 2 Active 10.0.0.254 0000.0c07.ac02 refresh 30 secs (nex
    Et1/0.4 Grp 2 Active 10.0.0.254 0000.0c07.ac02 refresh 30 secs (nex
  Group name is "HSRP1", advertisement interval is 34 sec
```

QUESTION 873

Refer to the exhibit. Which command would you use to configure a static route on Router1 to network 192.168.202.0/24 with a nondefault administrative distance?

- A. router1(config)#ip route 192.168.202.0 255.255.255.0 192.168.201.2 1
- B. router1(config)#ip route 192.168.202.0 255.255.255.0 192.168.201.2 5
- C. router1(config)#ip route 1 192.168.201.1 255.255.255.0 192.168.201.2
- D. router1(config)#ip route 5 192.168.202.0 255.255.255.0 192.168.201.2

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

The default AD of static route is 1 so we need to configure another number for the static route.

QUESTION 874

Which of the following dynamic routing protocols are Distance Vector routing protocols?

- A. IS-IS
- B. EIGRP
- C. OSPF
- D. BGP
- E. RIP

Correct Answer: BE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 875

You have configured a router with an OSPF router ID, but its IP address still reflects the physical interface. Which action can you take to correct the problem in the least disruptive way?

- A. Reload the OSPF process
- B. Specify a loopback address
- C. Reboot the router
- D. Save the router configuration

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Once an OSPF Router ID selection is done, it remains there even if you remove it or configure another OSPF Router ID. So the least disruptive way is to correct it using the command "clear ip ospf process".

QUESTION 876

Which command should you enter to view the error log in an EIGRP for IPv6 environment?

- A. show ipv6 eigrp neighbors
- B. show ipv6 eigrp topology
- C. show ipv6 eigrp traffic
- D. show ipv6 eigrp events

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 877

Refer to the exhibit. Which two statements about the network environment of router R1 must be true? (Choose two.)

```

R1#show ip route
Gateway of last resort is 10.85.33.14 to network 0.0.0.0

D*EX 0.0.0.0/0
  [170/257024] via 10.85.33.14, 7w0d, TenGigabitEthernet0/2/0.100
  [170/257024] via 10.85.33.10, 7w0d, TenGigabitEthernet0/1/0.100
    10.0.0.0/8 is variably subnetted, 6692 subnets, 20 masks
      B 10.0.0.0/8 [20/0] via 10.48.144.14, 1w5d
      D EX 10.0.1.0/24
        [170/51968] via 10.85.33.14, 7w0d, TenGigabitEthernet0/2/0.100
        [170/51968] via 10.85.33.10, 7w0d, TenGigabitEthernet0/1/0.100
      D EX 10.0.2.0/23
        [170/51968] via 10.85.33.14, 7w0d, TenGigabitEthernet0/2/0.100
        [170/51968] via 10.85.33.10, 7w0d, TenGigabitEthernet0/1/0.100
      D EX 10.0.4.0/22
        [170/51968] via 10.85.33.14, 7w0d, TenGigabitEthernet0/2/0.100

```

- A. The EIGRP administrative distance was manually changed from 90 to 170.
- B. There are 20 different network masks within the 10.0.0.0/8 network.
- C. Ten routes are equally load-balanced between Te0/1/0.100 and Te0/2/0.100.
- D. The 10.0.0.0/8 network was learned via external EIGRP.
- E. A static default route to 10.85.33.14 was defined.

Correct Answer: BC

Section: (none)

Explanation

QUESTION 878

Which two statements about exterior routing protocols are true? (Choose two.)

- A. They determine the optimal within an autonomous system.

- B. They determine the optimal path between autonomous systems.
- C. BGP is the current standard exterior routing protocol.
- D. Most modern networking supports both EGP and BGP for external routing.
- E. Most modern network routers support both EGP and EIGRP for external routing.

Correct Answer: BC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 879

You have two paths for the 10.10.10.0 network - one that has a feasible distance of 3072 and the other of 6144.

What do you need to do to load balance your EIGRP routes?

- A. Change the maximum paths to 2
- B. Change the configuration so they both have the same feasible distance
- C. Change the variance for the path that has a feasible distance of 3072 to 2
- D. Change the IP addresses so both paths have the same source IP address

Correct Answer: BC

QUESTION 880

DRAG DROP

Drag each route source from the left to the numbers on the right. Beginning with the lowest and ending with the highest administrative distance.

Select and Place:

- connected
- EBGP
- EIGRP
- OSPF
- RIP
- static

- 1
- 2
- 3
- 4
- 5
- 6

Answer:

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 881

Which two circumstances can prevent two routers from establishing an OSPF neighbor adjacency? (Choose two.)

- A. mismatched autonomous system numbers
- B. an ACL blocking traffic from multicast address 224.0.0.10
- C. mismatched process IDs
- D. mismatched hello timers and dead timers
- E. use of the same router ID on both devices

Correct Answer: DE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 882

Which three describe the reasons large OSPF networks use a hierarchical design? (Choose three.)

- A. to speed up convergence

- B. to reduce routing overhead
- C. to lower costs by replacing routers with distribution layer switches
- D. to decrease latency by increasing bandwidth
- E. to confine network instability to single areas of the network
- F. to reduce the complexity of router configuration

Correct Answer: ABE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 887

Which value is used to determine the active router in an HSRP default configuration?

- A. Router loopback address
- B. Router IP address
- C. Router priority
- D. Router tracking number
- E. If there is no priority configured for a standby group, what determines which router is active?

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Q. If there is no priority configured for a standby group, what determines which router is active?

- A. The priority field is used to elect the active router and the standby router for the specific group. In the case of an equal priority, the router with the highest IP address for the respective group is elected as active.

Furthermore, if there are more than two routers in the group, the second highest IP address determines the standby router and the other router/routers are in the listen state.

QUESTION 888

Refer to the exhibit. If RTR01 is configured as shown, which three addresses will be received by other routers that are running EIGRP on the network? (Choose three.)

```
RTR01 (config) #router eigrp 103
RTR01 (config-router) #network 10.4.3.0
RTR01 (config-router) #network 172.16.4.0
RTR01 (config-router) #network 192.168.2.0
RTR01 (config-router) #auto-summary
```

- A. 192.168.2.0
- B. 10.4.3.0
- C. 10.0.0.0
- D. 172.16.0.0
- E. 172.16.4.0
- F. 192.168.0.0

Correct Answer: ACD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 889

Which configuration command can you apply to a HSRP router so that its local interface becomes active if all other routers in the group fail?

- A. no additional config is required
- B. standby 1 track ethernet
- C. standby 1 preempt
- D. standby 1 priority 250

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Simply because that will be the default behavior routers would follow in the event all other routers in the HSRP group fail, then it would not keep attributes such as priority or preemption. What preemption does in summary is to make sure that the configured Priority on all routers within the same HSRP group is always respected. That is, if R1 is configured on the HSRP group with a priority of 150 but he stands as active since all other routers currently subscribed to that group have a priority 150, then will router will preempt the current active router and will take over hence becoming the new active router. With preemption disabled, the new router does not preempt the current active router, unless routers in the group have to renegotiate their roles based on each router's priority at the time of negotiation.

QUESTION 890

Which two statements about eBGP neighbor relationships are true? (Choose two.)

- A. The two devices must reside in different autonomous systems
- B. Neighbors must be specifically declared in the configuration of each device
- C. They can be created dynamically after the network statement is configured
- D. The two devices must reside in the same autonomous system
- E. The two devices must have matching timer settings

Correct Answer: AB

Section: (none)

Explanation

Explanation/Reference:

QUESTION 891

Refer to the exhibit. How will the router handle a packet destined for 192.0.2.156?

```
router#show ip route
```

Codes: C - connected, S - static, I - IGRP, R - RIP, M - mobile, B - BGP, D - EIGRP
EX - EIGRP external, O - OSPF, IA - OSPF inter area, N1 - OSPF NSSA external type 1,
N2 - OSPF NSSA external type 2, E1 - OSPF external type 1, E2 - OSPF external type 2,
E - EGP, I - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, * - candidate default, U - per-user
static route, o - ODR

Gateway of last resort is 192.168.4.1 to network 0.0.0.0

10.0.0.0/24 is subnetted, 3 subnets

- C 10.0.2.0 is directly connected, Ethernet1
- D 10.0.3.0 [90/2195456] via 192.168.1.2, 00:03:01, Serial0
- D 10.0.4.0 [90/2195456] via 192.168.3.1, 00:03:01, Serial1
- C 192.168.1.0/24 is directly connected, Serial0
- D 192.168.2.0/24 [90/2681856] via 192.168.1.2, 00:03:01, Serial0
[90/2681856] via 192.168.3.1, 00:03:01, Serial1
- C 192.168.3.0/24 is directly connected, Serial1
- C 192.168.4.0/24 is directly connected, Serial2

- A. The router will forward the packet via either Serial0 or Serial1.
- B. The router will return the packet to its source.
- C. The router will forward the packet via Serial2.
- D. The router will drop the packet.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 892

Which statements describe the routing protocol OSPF? (Choose three.)

- A. It supports VLSM.
- B. It is used to route between autonomous systems.
- C. It confines network instability to one area of the network.
- D. It increases routing overhead on the network.
- E. It allows extensive control of routing updates.
- F. It is simpler to configure than RIP v2.

Correct Answer: ACE

Section: (none)

Explanation

Explanation/Reference:

The OSPF protocol is based on link-state technology, which is a departure from the Bellman-Ford vector based algorithms used in traditional Internet routing protocols such as RIP. OSPF has introduced new concepts such as authentication of routing updates, Variable Length Subnet Masks (VLSM), route summarization, and so forth.

OSPF uses flooding to exchange link-state updates between routers. Any change in routing information is flooded to all routers in the network. Areas are introduced to put a boundary on the explosion of link-state updates. Flooding and calculation of the Dijkstra algorithm on a router is limited to changes within an area.

QUESTION 893

Refer to the exhibit. After you apply the given configurations to R1 and R2 you notice that OSPFv3 fails to start.

```
R1
ipv6 unicast-routing

interface FastEthernet0/0
    no ip address
ipv6 enable
    ipv6 address 3001:DBB:13::1/64
    ipv6 ospf 1 area 0
ipv6 router ospf 1
router-id 172.16.1.1

R2
ipv6 unicast-routing

interface FastEthernet0/0
    no ip address
    ipv6 enable
    ipv6 address 2001:DBB:12::12/64
    ipv6 ospf 1 area 3
ipv6 router ospf 1
router-id 172.16.3.3
```

- A. The area numbers on R1 and R2 are mismatched
- B. The IPv6 network addresses on R1 and R2 are mismatched
- C. The autonomous system numbers on R1 and R2 are mismatched
- D. The router ids on R1 and R2 are mismatched

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 894

Which command is used to display the collection of OSPF link states?

- A. show ip ospf link-state
- B. show ip ospf lsa database
- C. show ip ospf neighbors
- D. show ip ospf database

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

The "show ip ospf database" command displays the link states. Here is an example: Here is the lsa database on R2.

R2#show ip ospf database

OSPF Router with ID (2.2.2.2) (Process ID 1)

Router Link States (Area 0)

```

QUESTION 895

Refer to the exhibit. A network associate has configured OSPF with the command:

```
City(config-router)# network 192.168.12.64 0.0.0.63 area 0
```

After completing the configuration, the associate discovers that not all the interfaces are participating in OSPF. Which three of the interfaces shown in the exhibit will participate in OSPF according to this configuration statement? (Choose three.)

City#show ip interface brief

Interface	IP-Address	OK?	Method	Status	Protocol
FastEthernet0/0	192.168.12.48	Yes	manual	up	up
FastEthernet0/1	192.168.12.65	Yes	manual	up	up
Serial0/0	192.168.12.121	Yes	manual	up	up
Serial0/1	unassigned	Yes	unset	up	up
Serial0/1.102	192.168.12.125	Yes	manual	up	up
Serial0/1.103	192.168.12.129	Yes	manual	up	up
Serial0/1.104	192.168.12.133	Yes	manual	up	up

City#

- A. FastEthernet0 /0
- B. FastEthernet0 /1
- C. Serial0/0
- D. Serial0/1.102
- E. Serial0/1.103
- F. Serial0/1.104

Correct Answer: BCD

Section: (none)

Explanation

Explanation/Reference:

Explanation:

The "network 192.168.12.64 0.0.0.63 equals to network 192.168.12.64/26. This network has: Increment: 64 (/26= 1111)

1111.1111 1111.1111 1111.1100 0000) + Network address:

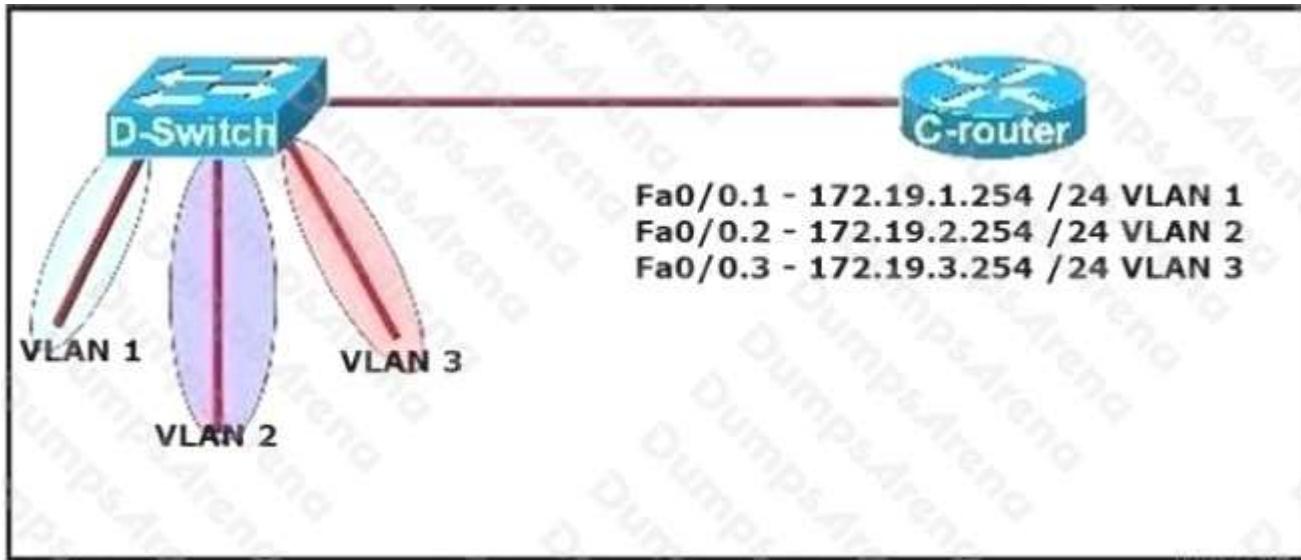

192.168.12.64

Broadcast address: 192.168.12.127

Therefore all interface in the range of this network will join OSPF.

QUESTION 896

Refer to the exhibit. C-router is to be used as a "router-on-a-stick" to route between the VLANs. All the interfaces have been properly configured and IP routing is operational. The hosts in the VLANs have been configured with the appropriate default gateway. What is true about this configuration?

- A. These commands need to be added to the configuration:

```
C-router(config)# router eigrp 123
C-router(config-router)# network 172.19.0.0
```

- B. These commands need to be added to the configuration:

```
C-router(config)# router ospf 1
C-router(config-router)# network 172.19.0.0 0.0.3.255 area 0
```

- C. These commands need to be added to the configuration:

```
C-router(config)# router rip
C-router(config-router)# network 172.19.0.0
```

- D. No further routing configuration is required.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Since all the same router (C-router) is the default gateway for all three VLANs, all traffic destined to a different VLAN will be sent to the C-router. The C-router will have knowledge of all three networks since they will appear as directly connected in the routing table. Since the C-router already knows how to get to all three networks, no routing protocols need to be configured.

QUESTION 897

Refer to the exhibit. Which address and mask combination represents a summary of the routes learned by EIGRP?

Gateway of last resort is not set

192.168.25.0/30 is subnetted, 4 subnets

- D 192.168.25.20 [90/2681856] via 192.168.15.5, 00:00:10, Serial0/1
- D 192.168.25.16 [90/1823638] via 192.168.15.5, 00:00:50, Serial0/1
- D 192.168.25.24 [90/3837233] via 192.168.15.5, 00:05:23, Serial0/1
- D 192.168.25.28 [90/8127323] via 192.168.15.5, 00:06:45, Serial0/1
- C 192.168.15.4/30 is directly connected, Serial0/1
- C 192.168.2.0/24 is directly connected, FastEthernet0/0

- A. 192.168.25.0 255.255.255.240
- B. 192.168.25.0 255.255.255.252
- C. 192.168.25.16 255.255.255.240
- D. 192.168.25.16 255.255.255.252
- E. 192.168.25.28 255.255.255.240
- F. 192.168.25.28 255.255.255.252

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

The binary version of 20 is 10100.

The binary version of 16 is 10000.

The binary version of 24 is 11000.

The binary version of 28 is 11100.

The subnet mask is /28. The mask is 255.255.255.240.

Note:

From the output above, EIGRP learned 4 routes and we need to find out the summary of them:

192.168.25.16

■

192.168.25.20

■

192.168.25.24

■

192.168.25.28

■

-> The increment should be $28 - 16 = 12$ but 12 is not an exponentiation of 2; so we must choose 16 (24). Therefore the subnet mask is /28 ($=1111\ 1111.1111\ 1111.1111\ 11110000$) = 255.255.255.240.

So the best answer should be 192.168.25.16 255.255.255.240.

QUESTION 898

Refer to the exhibit. Given the output for this command, if the router ID has not been manually set, what router ID will OSPF use for this router?

```
RouterD# show ip interface brief
Interface          IP-Address      OK?    Method     Status     Protocol
FastEthernet0/0    192.168.5.3    Yes   manual     up        up
FastEthernet0/1    10.1.1.2      Yes   manual     up        up
Loopback0          172.16.5.1    Yes   NVRAM     up        up
Loopback1          10.154.154.1  Yes   NVRAM     up        up
```

- A. 10.1.1.2
- B. 10.154.154.1
- C. 172.16.5.1
- D. 192.168.5.3

Correct Answer: C

Section: (none)

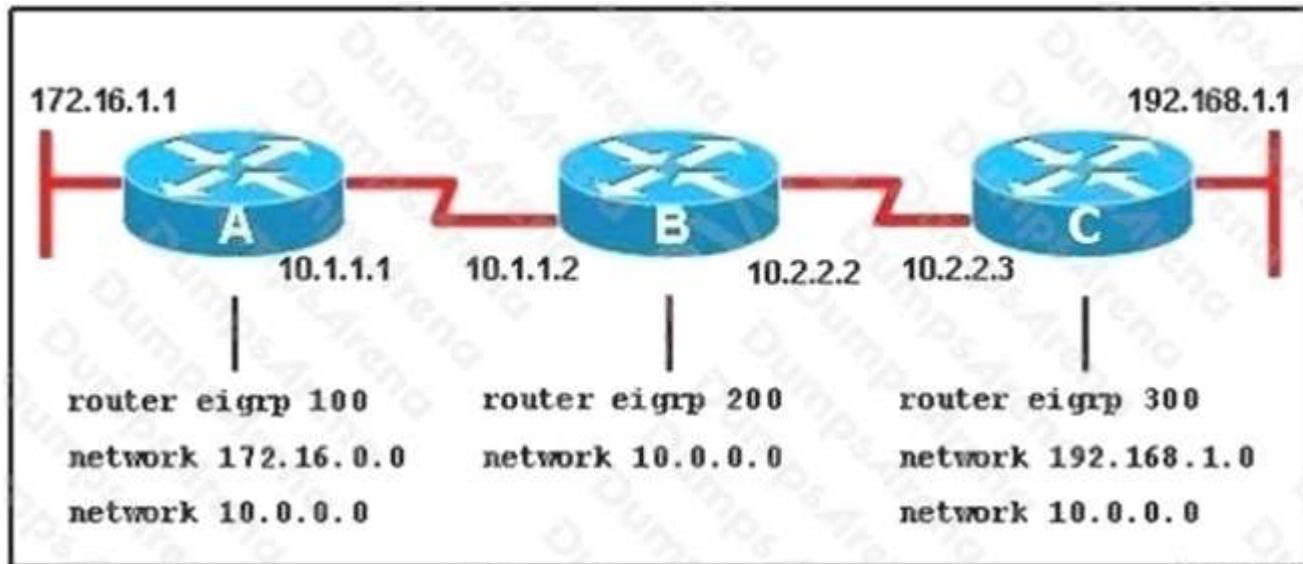

Explanation

Explanation/Reference:

The highest IP address of all loopback interfaces will be chosen -> Loopback 0 will be chosen as the router ID.

QUESTION 899

Refer to the exhibit. When running EIGRP, what is required for RouterA to exchange routing updates with RouterC?

- A. AS numbers must be changed to match on all the routers

- B. Loopback interfaces must be configured so a DR is elected
- C. The no auto-summary command is needed on Router A and Router C
- D. Router B needs to have two network statements, one for each connected network

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

This question is to examine the understanding of the interaction between EIGRP routers. The following information must be matched so as to create neighborhood. EIGRP routers to establish, must match the following information: 1. AS Number; 2. K value.

QUESTION 900

A network administrator is troubleshooting the OSPF configuration of routers R1 and R2. The routers cannot establish an adjacency relationship on their common Ethernet link.

R1: Ethernet0 is up, line protocol is up

Internet address 192.168.1.2/24, Area 0
Process ID 1, Router ID 192.168.31.33, Network Type BROADCAST, Cost: 10
Transmit Delay is 1 sec, State DR, Priority 1
Designated Router (ID) 192.168.31.33, Interface address 192.168.1.2
No backup designated router on this network
Timer intervals configured, Hello 5, Dead 20, Wait 20, Retransmit 5

R2: Ethernet0 is up, line protocol is up

Internet address 192.168.1.2/24, Area 0
Process ID 2, Router ID 192.168.31.11, Network Type BROADCAST, Cost: 10
Transmit Delay is 1 sec, State DR, Priority 1
Designated Router (ID) 192.168.31.11, Interface address 192.168.1.1
No backup designated router on this network
Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5

The graphic shows the output of the show ip ospf interface e0 command for routers R1 and R2. Based on the information in the graphic, what is the cause of this problem?

- A. The OSPF area is not configured properly.
 - B. The priority on R1 should be set higher.
 - C. The cost on R1 should be set higher.
 - D. The hello and dead timers are not configured properly.
 - E. A backup designated router needs to be added to the network.
- F. The OSPF process ID numbers must match.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

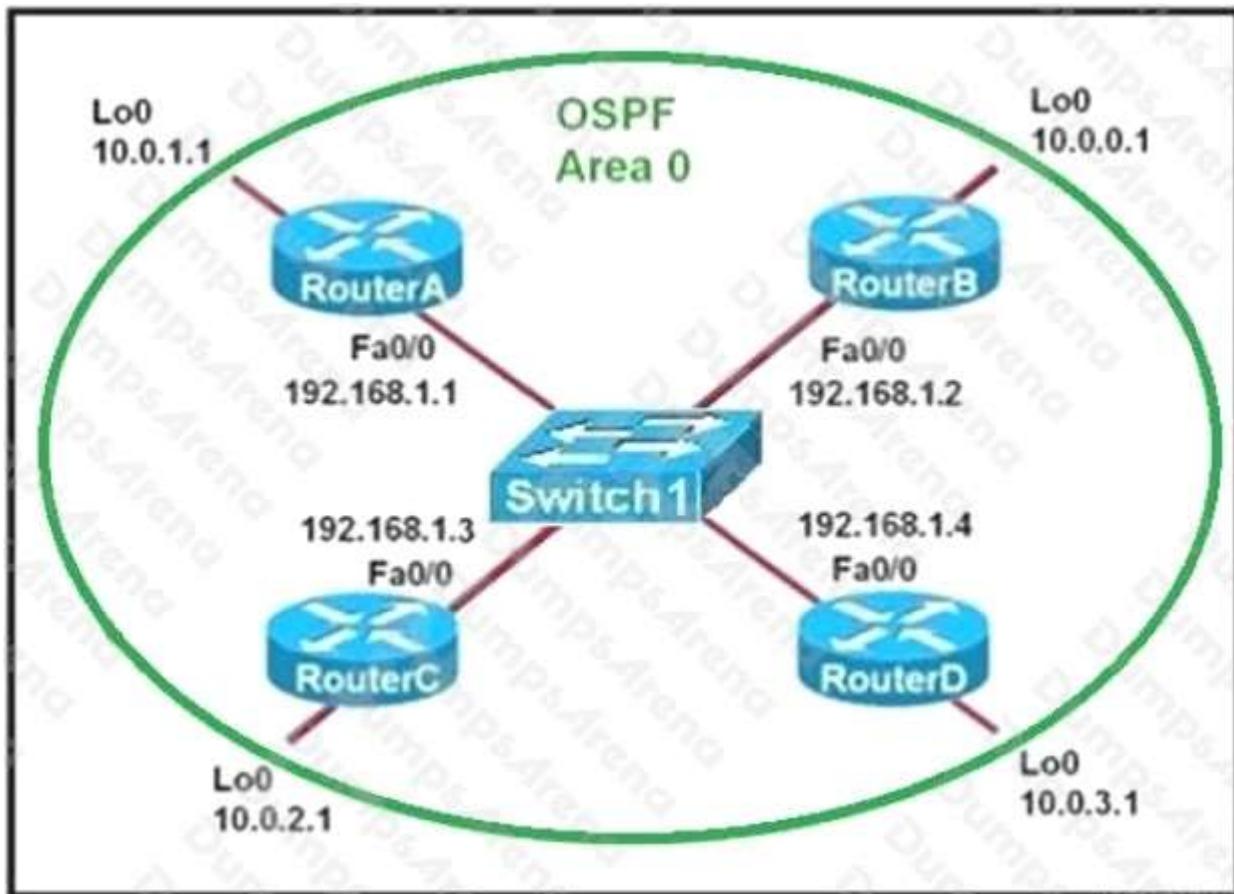

Explanation:

In OSPF, the hello and dead intervals must match and here we can see the hello interval is set to 5 on R1 and 10 on R2.

The dead interval is also set to 20 on R1 but it is 40 on R2.

QUESTION 901

Refer to the exhibit. Which two statements are true about the loopback address that is configured on RouterB? (Choose two.)

- A. It ensures that data will be forwarded by RouterB.
- B. It provides stability for the OSPF process on RouterB.
- C. It specifies that the router ID for RouterB should be 10.0.0.1.
- D. It decreases the metric for routes that are advertised from RouterB.
- E. It indicates that RouterB should be elected the DR for the LAN.

Correct Answer: BC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 902

If all OSPF routers in a single area are configured with the same priority value, what value does a router use for the OSPF router ID in the absence of a loopback interface?

- A. the IP address of the first Fast Ethernet interface
- B. the IP address of the console management interface
- C. the highest IP address among its active interfaces
- D. the lowest IP address among its active interfaces
- E. the priority value until a loopback interface is configured

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 903

The OSPF Hello protocol performs which of the following tasks? (Choose two.)

- A. It provides dynamic neighbor discovery.
- B. It detects unreachable neighbors in 90 second intervals.
- C. It maintains neighbor relationships.
- D. It negotiates correctness parameters between neighboring interfaces.
- E. It uses timers to elect the router with the fastest links as the designated router.
- F. It broadcasts hello packets throughout the internetwork to discover all routers that are running OSPF.

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 904

What are two requirements for an HSRP group? (Choose two.)

- A. exactly one active router
- B. one or more standby routers
- C. one or more backup virtual routers
- D. exactly one standby active router
- E. exactly one backup virtual router

Correct Answer: AB

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Exactly one active router: Only one Active Router per HSRP group will be elected based on highest priority. In case of equal priority, Highest IP address will be elected as Active Router. One or more standby routers: There can be one or more Standby Routers.

QUESTION 905

Which two pieces of information can you learn by viewing the routing table? (Choose two.)

- A. whether an ACL was applied inbound or outbound to an interface
- B. the EIGRP or BGP autonomous system

- C. whether the administrative distance was manually or dynamically configured
- D. which neighbor adjacencies are established
- E. the length of time that a route has been known

Correct Answer: CE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 906

- 10.0.0.0/24 is subnetted, 1 subnets
- C 10.0.0.0 is directly connected, FastEthernet0/1
 - C 172.160.0/16 is directly connected, FastEthernet0/0
 - D 192.168.0.0/24 [90/30720] via 172.16.0.2, 00:00:03, FastEthernet0/0

Refer to the exhibit. Which route type does the routing protocol Code D represent in the output?

- A. statically assigned route
- B. route learned through EIGRP
- C. /24 route of a locally configured IP
- D. internal BGP route

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 907

An engineer must configure an OSPF neighbor relationship between router R1 and R3. The authentication configuration has been configured and the connecting interfaces are in the same 192.168.1.0/30 subnet. What are the next two steps to complete the configuration? (Choose two.)

- A. configure the interfaces as OSPF active on both sides
- B. configure both interfaces with the same area ID
- C. configure the hello and dead timers to match on both sides
- D. configure the same process ID for the router OSPF process
- E. configure the same router ID on both routing processes

Correct Answer: AB

Section: (none)

Explanation

Explanation/Reference:

QUESTION 908

```
R1# show ip route | begin gateway
Gateway of last resort is 209.165.200.246 to network 0.0.0.0
S* 0.0.0.0/0 [1/0] via 209.165.200.246, Serial0/1/0
    is directly connected, Serial0/1/0
    172.16.0.0/16 is variably subnetted, 2 subnets, 2 masks
S   172.16.3.0/24 [1/0] via 209.165.200.250, Serial0/0/0
O   172.16.3.0/28 [110/1] via 209.165.200.254, 00:00:28, Serial0/0/1
    209.165.200.0/24 is variably subnetted, 6 subnets, 2 masks
C   209.165.200.244/30 is directly connected, Serial0/1/0

Explanation/Reference:

QUESTION 910

Refer to the exhibit. Router R2 is configured with multiple routes to reach network 10.1.1.0/24 from router R1. Which path is chosen by router R2 to reach the destination network 10.1.1.0/24?

- A. static
- B. EIGRP
- C. eBGP
- D. OSPF

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 911

```
R1# show ip route
Codes: C - connected, S - static, I - IGRP, R - RIP, M - mobile, B - BGP
      D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
      N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
      E1 - OSPF external type 1, E2 - OSPF external type 2, E - EGP
      i - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, * - candidate default
      U - per-user static route, o - ODR
Gateway of last resort is not set
C       1.0.0.0/8 is directly connected, Loopback0
        10.0.0.0/8 is variably subnetted, 4 subnets, 2 masks
O         10.0.1.3/32 [110/100] via 10.0.1.3, 00:39:08, Serial0
C         10.0.1.0/24 is directly connected, Serial0
O         10.0.1.5/32 [110/5] via 10.0.1.50, 00:39:08, Serial0
O         10.0.1.4/32 [110/10] via 10.0.1.4, 00:39:08, Serial0
```

Refer to the exhibit. What is the next hop address for traffic that is destined to host 10.0.1.5?

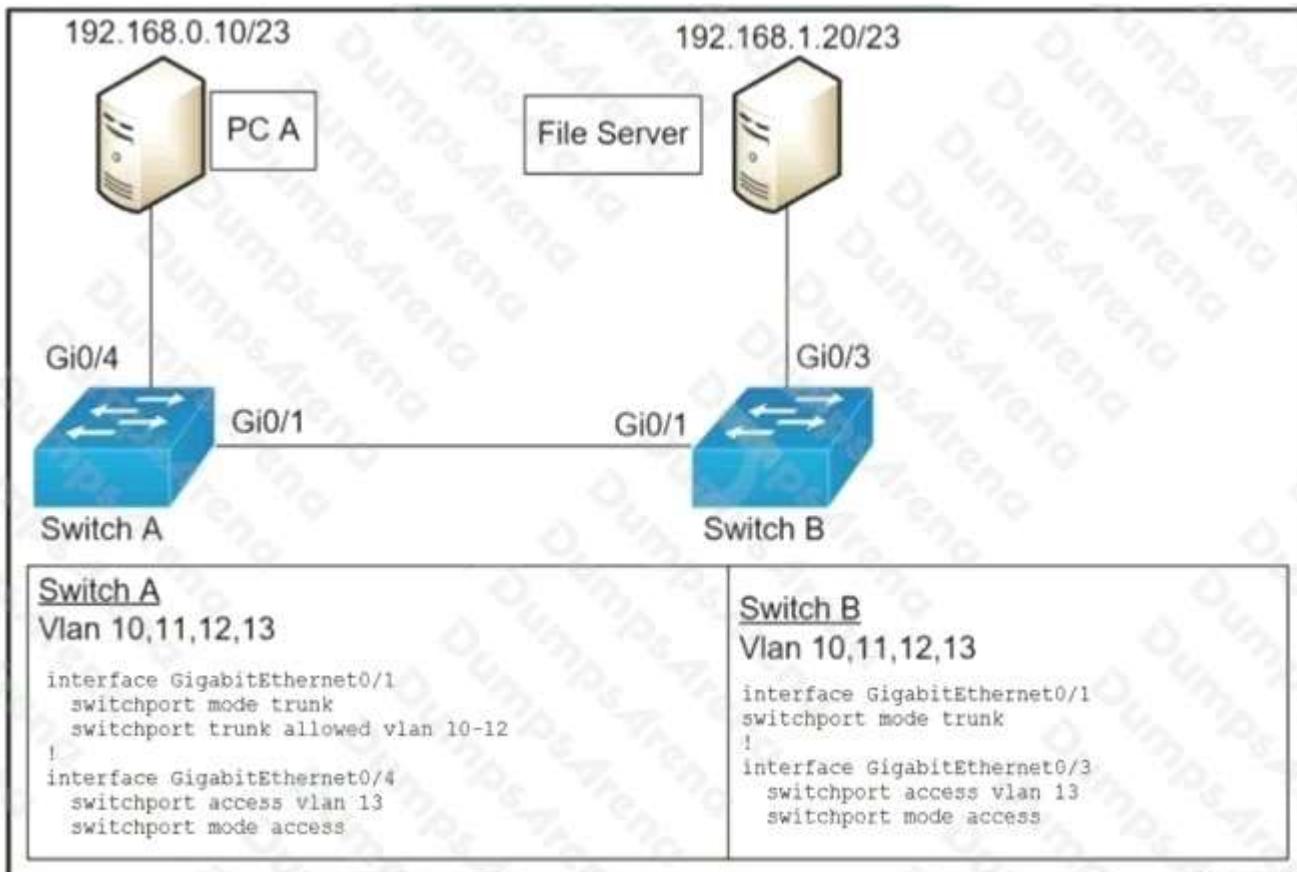

- A. Loopback 0
- B. 10.0.1.4
- C. 10.0.1.3
- D. 10.0.1.50

Correct Answer: D

Section: (none)
Explanation

Explanation/Reference:

QUESTION 912

Refer to the exhibit. A network administrator assumes a task to complete the connectivity between PC A and the File Server. Switch A and Switch B have been partially configured with VLANs 10, 11, 12, and 13. What is the next step in the configuration?

- A. Add PC A to VLAN 10 and the File Server to VLAN 11 for VLAN segmentation
- B. Add VLAN 13 to the trunk links on Switch A and Switch B for VLAN propagation
- C. Add a router on a stick between Switch A and Switch B allowing for Inter-VLAN routing
- D. Add PC A to the same subnet as the File Server allowing for intra-VLAN communication

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 913
DRAG DROP

A network engineer is configuring an OSPFv2 neighbor adjacency. Drag and drop the parameters from the left onto their required categories on the right. Not all parameters are used.

Select and Place:

Answer Area

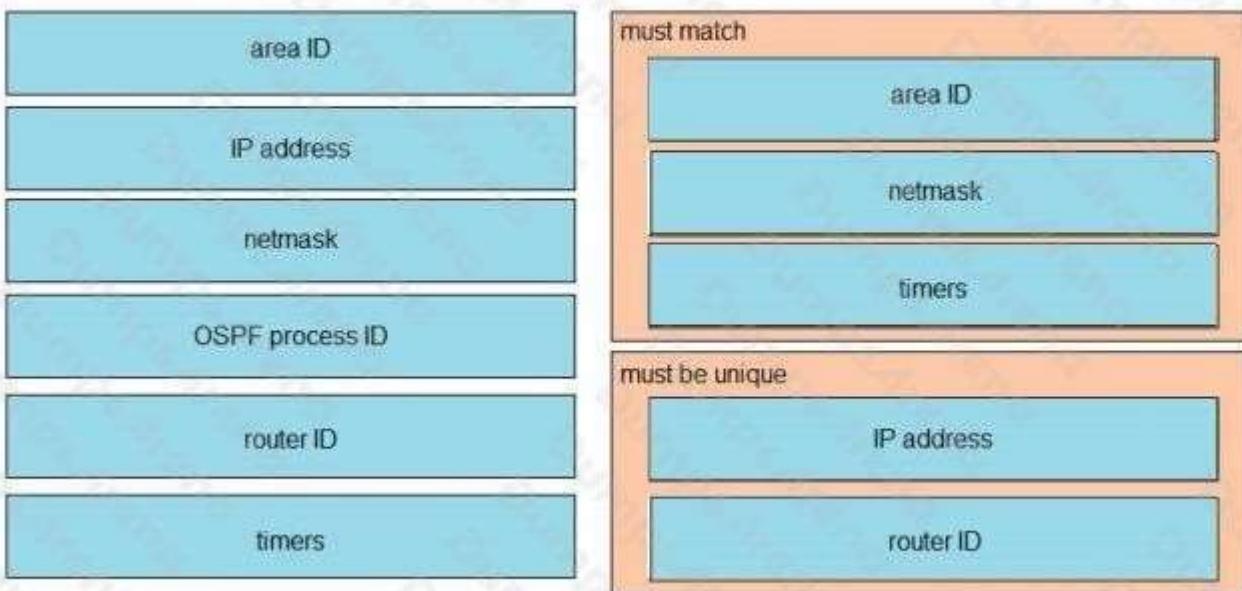

- area ID
- IP address
- netmask
- OSPF process ID
- router ID
- timers

Answer:

A.

Answer Area

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 914

R1 has learned route 192.168.12.0/24 via IS-IS, OSPF, RIP, and Internal EIGRP. Under normal operating conditions, which routing protocol is installed in the routing table?

- A. IS-IS
- B. Internal EIGRP
- C. RIP
- D. OSPF

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

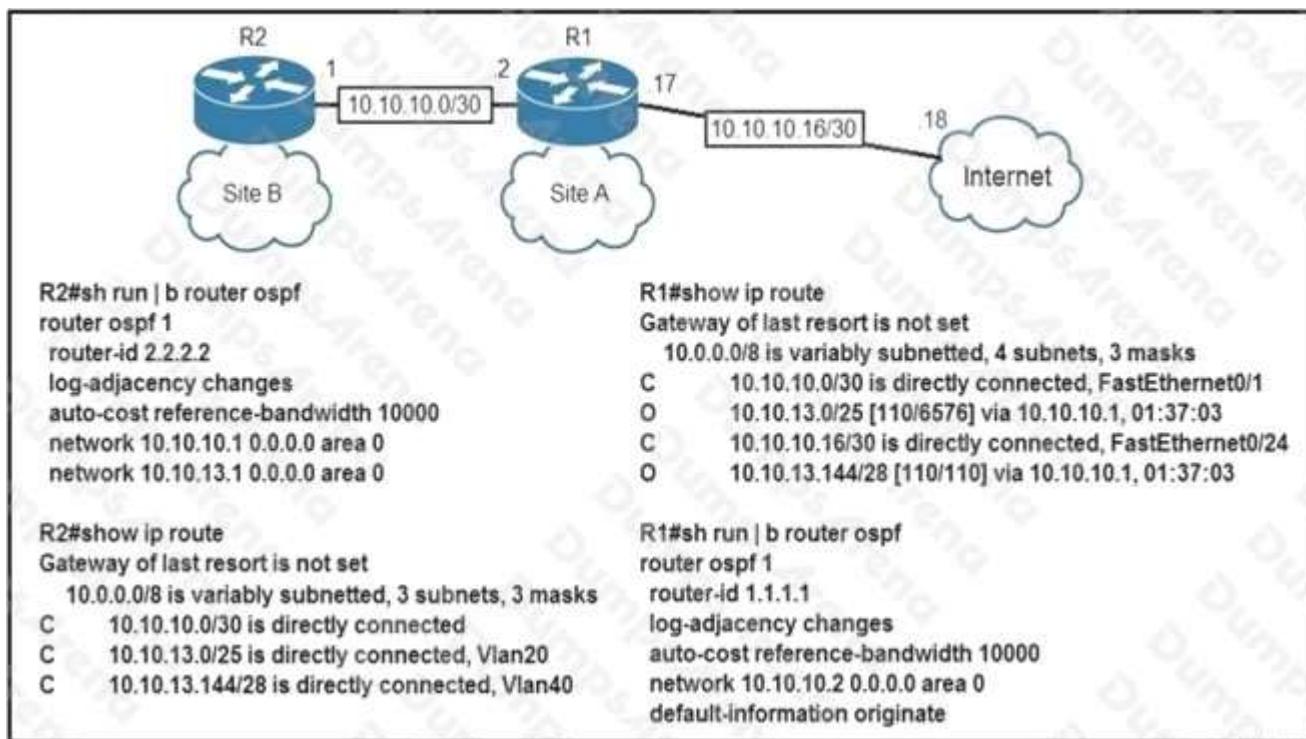

Explanation:

With the same route (prefix), the router will choose the routing protocol with lowest Administrative Distance (AD) to install into the routing table. The AD of Internal EIGRP (90) is lowest so it would be chosen. The table below lists the ADs of popular routing protocols.

Route Source	Administrative Distance
Directly Connected	0
Static	1
EIGRP	90
EIGRP Summary route	5
OSPF	110
RIP	120

Note: The AD of IS-IS is 115. The "EIGRP" in the table above is "Internal EIGRP". The AD of "External EIGRP" is 170. An EIGRP external route is a route that was redistributed into EIGRP.

QUESTION 915

Refer to the exhibit. The default-information originate command is configured under the R1 OSPF configuration. After testing, workstations on VLAN 20 at Site B cannot reach a DNS server on the Internet.

Which action corrects the configuration issue?

- A. Add the default-information originate command on R2.
- B. Add the always keyword to the default-information originate command on R1.
- C. Configure the ip route 0.0.0.0 0.0.0.0 10.10.10.18 command on R1.
- D. Configure the ip route 0.0.0.0 0.0.0.0 10.10.10.2 command on R2.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 916

```
R1# show ip route | begin gateway
Gateway of last resort is 209.165.200.246 to network 0.0.0.0
S* 0.0.0.0/0 [1/0] via 209.165.200.246, Serial0/1/0
    is directly connected, Serial0/1/0
    172.16.0.0/16 is variably subnetted, 3 subnets, 3 masks
S   172.16.0.0/24 [1/0] via 207.165.200.250, Serial0/0/0
O   172.16.0.128/25 [110/38443] via 207.165.200.254, 00:00:23, Serial0/0/1
D   172.16.0.192/29 [90/3184439] via 207.165.200.254, 00:00:25, Serial0/0/1
    209.165.200.0/24 is variably subnetted, 4 subnets, 2 masks
C   209.165.200.248/30 is directly connected, Serial0/0/0
L   209.165.200.249/32 is directly connected, Serial0/0/0
C   209.165.200.252/30 is directly connected, Serial0/0/1
L   209.165.200.253/32 is directly connected, Serial0/0/1
```

Refer to the exhibit. With which metric was the route to host 172.16.0.202 learned?

- A. 0
- B. 110
- C. 38443
- D. 3184439

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Both the line "O 172.16.0.128/25" and "S 172.16.0.0/24" cover the host 172.16.0.202 but with the "longest (prefix) match" rule the router will choose the first route.

QUESTION 917

A user configured OSPF in a single area between two routers. A serial interface connecting R1 and R2 is running encapsulation PPP. By default, which OSPF network type is seen on this interface when the user types show ip ospf interface on R1 or R2?

- A. nonbroadcast
- B. point-to-point
- C. point-to-multipoint
- D. broadcast

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 918

Which MAC address is recognized as a VRRP virtual address?

- A. 0000.5E00.010a
- B. 0005.3709.8968
- C. 0000.0C07.AC99
- D. 0007.C070.AB01

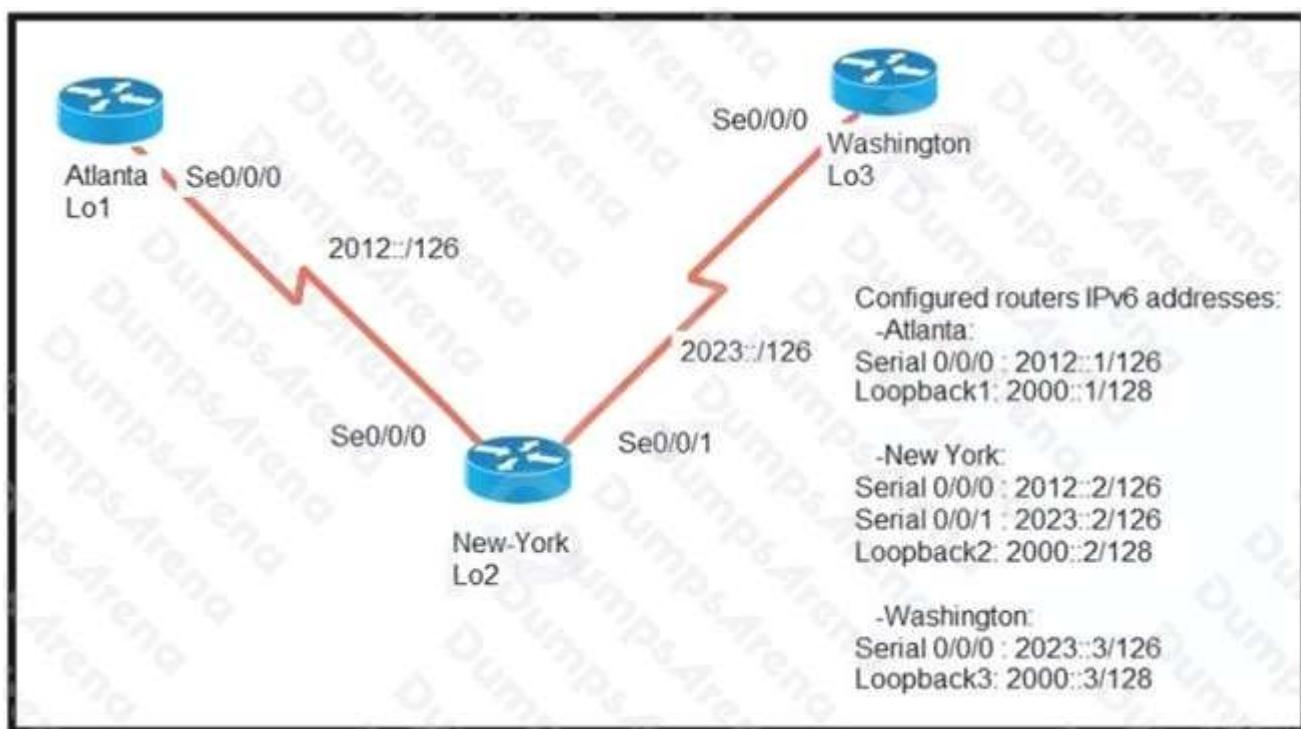

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 919

Refer to the exhibit. The New York router is configured with static routes pointing to the Atlanta and Washington sites.

Which two tasks must be performed so that the Se0/0/0 interfaces on the Atlanta and Washington routers can reach one another? (Choose two.)

- A. Configure the ipv6 route 2023::/126 2012::1 command on the Atlanta router.
- B. Configure the ipv6 route 2012::/126 2023::2 command on the Washington router.
- C. Configure the ipv6 route 2012::/126 2023::1 command on the Washington router.
- D. Configure the ipv6 route 2023::/126 2012::2 command on the Atlanta router.
- E. Configure the ipv6 route 2012::/126 s0/0/0 command on the Atlanta router.

Correct Answer: BD

Section: (none)

Explanation

Explanation/Reference:**QUESTION 920**

A router running EIGRP has learned the same route from two different paths. Which parameter does the router use to select the best path?

- A. as-path
- B. administrative distance
- C. metric
- D. cost

Correct Answer: C**Section:** (none)**Explanation****Explanation/Reference:****Explanation:**

If a router learns two different paths for the same network from the same routing protocol, it has to decide which route is better and will be placed in the routing table. Metric is the measure used to decide which route is better (lower number is better). Each routing protocol uses its own metric. For example, RIP uses hop counts as a metric, while OSPF uses cost.

Reference: <https://study-ccna.com/administrative-distance-metric/>

QUESTION 921

An engineer configured an OSPF neighbor as a designated router. Which state verifies the designated router is in the proper mode?

- A. Init
- B. 2-way
- C. Exchange
- D. Full

Correct Answer: D**Section:** (none)**Explanation****Explanation/Reference:****QUESTION 922**

```
R1# show ip route

D    192.168.16.0/26 [90/2679326] via 192.168.1.1
R    192.168.16.0/24 [120/3] via 192.168.1.2
O    192.168.16.0/21 [110/2] via 192.168.1.3
i L1 192.168.16.0/27 [115/30] via 192.168.1.4
```

Refer to the exhibit. Which route does R1 select for traffic that is destined to 192.168.16.2?

- A. 192.168.16.0/21
- B. 192.168.16.0/24
- C. 192.168.16.0/26
- D. 192.168.16.0/27

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

The destination IP addresses match all four entries in the routing table but the 192.168.16.0/27 has the longest prefix so it will be chosen. This is called the "longest prefix match" rule.

QUESTION 923

```
Gateway of last resort is 10.12.0.1 to network 0.0.0.0

O*E2 0.0.0.0/0 [110/1] via 10.12.0.1, 00:00:01, GigabitEthernet0/0
  10.0.0.0/8 is variably subnetted, 2 subnets, 2 masks
    C  10.0.0.0/24 is directly connected, GigabitEthernet0/0
    L  10.0.0.2/32 is directly connected, GigabitEthernet0/0
    C  10.13.0.0/24 is directly connected, GigabitEthernet0/1
    L  10.13.0.2/32 is directly connected, GigabitEthernet0/1
```

Refer to the exhibit. If configuring a static default route on the router with the ip route 0.0.0.0 0.0.0.0 10.13.0.1 120 command, how does the router respond?

- A. It starts sending traffic without a specific matching entry in the routing table to GigabitEthernet0/1.
- B. It immediately replaces the existing OSPF route in the routing table with the newly configured static route.
- C. It starts load-balancing traffic between the two default routes.
- D. It ignores the new static route until the existing OSPF default route is removed.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

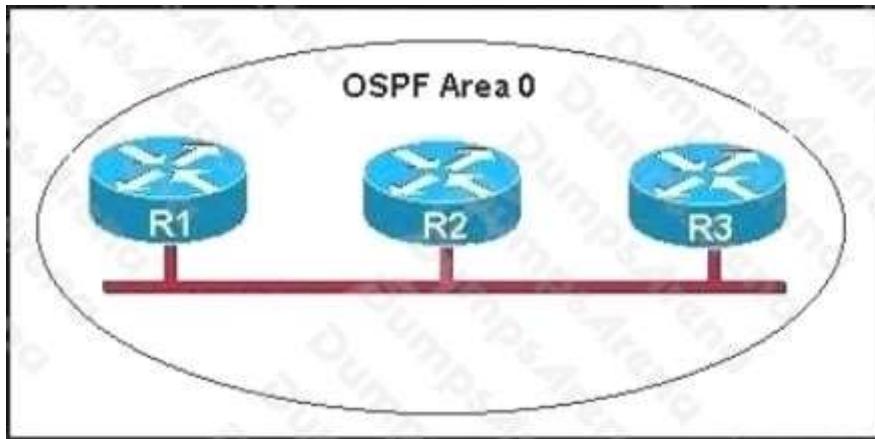

Our new static default route has the Administrative Distance (AD) of 120, which is bigger than the AD of OSPF External route (O*E2) so it will not be pushed into the routing table until the current OSPF External route is removed.

For your information, if you don't type the AD of 120 (using the command "ip route 0.0.0.0 0.0.0.0 10.13.0.1") then the new static default route would replace the OSPF default route as the default AD of static route is 1. You will see such line in the routing table:

S* 0.0.0.0/0 [1/0] via 10.13.0.1

QUESTION 924

Refer to the graphic. R1 is unable to establish an OSPF neighbor relationship with R3. What are possible reasons for this problem? (Choose two.)

- A. All of the routers need to be configured for backbone Area 1.
- B. R1 and R2 are the DR and BDR, so OSPF will not establish neighbor adjacency with R3.
- C. A static route has been configured from R1 to R3 and prevents the neighbor adjacency from being established.
- D. The hello and dead interval timers are not set to the same values on R1 and R3.
- E. EIGRP is also configured on these routers with a lower administrative distance.
- F. R1 and R3 are configured in different areas.

Correct Answer: DF

Section: (none)

Explanation

Explanation/Reference:

Explanation:

This question is to examine the conditions for OSPF to create neighborhood. So as to make the two routers become neighbors, each router must be matched with the following items:

1. The area ID and its types
2. Hello and failure time interval timer
3. OSPF Password (Optional)

QUESTION 925

```

Router#show ip route
Codes: L - local, C - connected, S - static, R - RIP, M - mobile, B - BGP
      D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
      N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
      E1 - OSPF external type 1, E2 - OSPF external type 2
      i - IS-IS, su - IS-IS summary, L1 - IS-IS level-1, L2 - IS-IS level-2
      ia - IS-IS inter area, * - candidate default, U - per-user static route
      Gateway of last resort is 209.165.202.131 to network 0.0.0.0

S* 0.0.0.0/0 [1/0] via 209.165.202.131
  209.165.200.0/27 is subnetted, 1 subnets
S   209.165.200.224 [254/0] via 209.165.202.129
  209.165.201.0/27 is subnetted, 1 subnets
S   209.165.201.0 [1/0] via 209.165.202.130

```

Refer to the exhibit. Which command configures a floating static route to provide a backup to the primary link?

- A. ip route 209.165.200.224 255.255.255.224 209.165.202.129 254
- B. ip route 209.165.201.0 255.255.255.224 209.165.202.130
- C. ip route 0.0.0.0 0.0.0.0 209.165.200.224
- D. ip route 0.0.0.0 0.0.0.0 209.165.202.131

Correct Answer: A

Section: (none)

QUESTION 930

When the active router in a VRRP group fails, which router assumes the role and forwards packets?

- A. forwarding
- B. standby
- C. backup

D. listening

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 931

Which action does the router take as it forwards a packet through the network?

- A. The router encapsulates the original packet and then includes a tag that identifies the source router MAC address and transmits it transparently to the destination.
- B. The router encapsulates the source and destination IP addresses with the sending router IP address as the source and the neighbor IP address as the destination.
- C. The router replaces the original source and destination MAC addresses with the sending router MAC address as the source and neighbor MAC address as the destination.
- D. The router replaces the source and destination labels with the sending router interface label as a source and the next hop router label as a destination.

Correct Answer: C

QUESTION 934

What is the purpose of using First Hop Redundancy Protocol on a specific subnet?

- A. forwards multicast hello messages between routers
- B. sends the default route to the hosts on a network
- C. ensures a loop-free physical topology
- D. filters traffic based on destination IP addressing

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 935

Refer to the exhibit. Which configuration issue is preventing the OSPF neighbor relationship from being established between the two routers?

```

R1#show running-config
Building configuration...
!
interface GigabitEthernet1/0
  mtu 1600
  ip address 192.168.0.1 255.255.255.252
  negotiation auto
!
router ospf 1
  router-id 1.1.1.1
  passive-interface default
  no passive-interface GigabitEthernet1/0
  network 192.168.0.1 0.0.0.0 area 0
!
R2#show running-config
Building configuration...
!
interface GigabitEthernet2/0
  ip address 192.168.0.2 255.255.255.252
  negotiation auto
!
router ospf 1
  router-id 2.2.2.2
  passive-interface default
  no passive-interface GigabitEthernet2/0
  network 192.168.0.2 0.0.0.0 area 0

```

- A. R1 has an incorrect network command for interface Gi1/0.
- B. R2 should have its network command in area 1.
- C. R1 interface Gi1/0 has a larger MTU size.
- D. R2 is using the passive-interface default command.

Correct Answer: C

QUESTION 949

Which NAT term is defined as a group of addresses available for NAT use?

- A. NAT pool
- B. dynamic NAT
- C. static NAT
- D. one-way NAT

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 950

Which command can you enter to allow Telnet to be supported in addition to SSH?

- A. transport input telnet ssh
- B. transport input telnet
- C. no transport input telnet
- D. privilege level 15

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 951

Refer to the exhibit. After you apply the given configuration to a router, the DHCP clients behind the device cannot communicate with hosts outside of their subnet. Which action is most likely to correct the problem?

```
ip dhcp pool test
  network 192.168.10.0 /27
  domain-name cisco.com
  dns-server 172.16.1.1 172.16.2.1
  netbios-name-server 172.16.1.10 172.16.2.10
```

- A. Configure the dns server on the same subnet as the clients
- B. Activate the dhcp pool
- C. Correct the subnet mask
- D. Configure the default gateway

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 952

Refer to the exhibit. Which rule does the DHCP server use when there is an IP address conflict?

Router# show ip dhcp conflict		
IP address	Detection method	Detection time
172.16.1.32	Ping	Feb 16 1998 12:28 PM
172.16.1.64	Gratuitous ARP	Feb 23 1198 08:12 AM

- A. The address is removed from the pool until the conflict is resolved.
- B. The address remains in the pool until the conflict is resolved.
- C. Only the IP detected by Gratuitous ARP is removed from the pool.
- D. Only the IP detected by Ping is removed from the pool.
- E. The IP will be shown, even after the conflict is resolved.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

An address conflict occurs when two hosts use the same IP address. During address assignment, DHCP checks for conflicts using ping and gratuitous ARP. If a conflict is detected, the address is removed from the pool. The address will not be assigned until the administrator resolves the conflict.

QUESTION 953

Which command can you enter to determine the addresses that have been assigned on a DHCP Server?

- A. Show ip DHCP database.
- B. Show ip DHCP pool.
- C. Show ip DHCP binding.
- D. Show ip DHCP server statistic.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 954

What is the authoritative source for an address lookup?

- A. a recursive DNS search
- B. the operating system cache
- C. the ISP local cache
- D. the browser cache

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 955

Which command is used to verify the DHCP relay agent address that has been set up on your Cisco IOS

router?

- A. show ip interface brief
- B. show ip dhcp bindings
- C. show ip route
- D. show ip interface
- E. show interface
- F. show ip dhcp pool

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 956

Which type of information resides on a DHCP server?

- A. a list of the available IP addresses in a pool
- B. a list of public IP addresses and their corresponding names
- C. usernames and passwords for the end users in a domain
- D. a list of statically assigned MAC addresses

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 957

What are two roles of Domain Name Services (DNS)? (Choose two.)

- A. builds a flat structure of DNS names for more efficient IP operations
- B. encrypts network Traffic as it travels across a WAN by default
- C. improves security by protecting IP addresses under Fully Qualified Domain Names (FQDNs)
- D. enables applications to identify resources by name instead of IP address
- E. allows a single host name to be shared across more than one IP address

Correct Answer: DE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 958

Which Cisco IOS command will indicate that interface GigabitEthernet 0/0 is configured via DHCP?

- A. show ip interface GigabitEthernet 0/0 dhcp
- B. show interface GigabitEthernet 0/0
- C. show ip interface dhcp
- D. show ip interface GigabitEthernet 0/0

E. show ip interface GigabitEthernet 0/0 brief

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 959

What will happen if you configure the logging trap debug command on a router?

- A. It causes the router to send messages with lower severity levels to the syslog server
- B. It causes the router to send all messages with the severity levels Warning, Error, Critical, and Emergency to the syslog server
- C. It causes the router to send all messages to the syslog server
- D. It causes the router to stop sending all messages to the syslog server

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 960

A network administrator enters the following command on a router: logging trap 3. What are three message types that will be sent to the Syslog server? (Choose three.)

- A. informational
- B. emergency
- C. warning
- D. critical
- E. debug
- F. error

Correct Answer: BDF

Section: (none)

Explanation

Explanation/Reference:

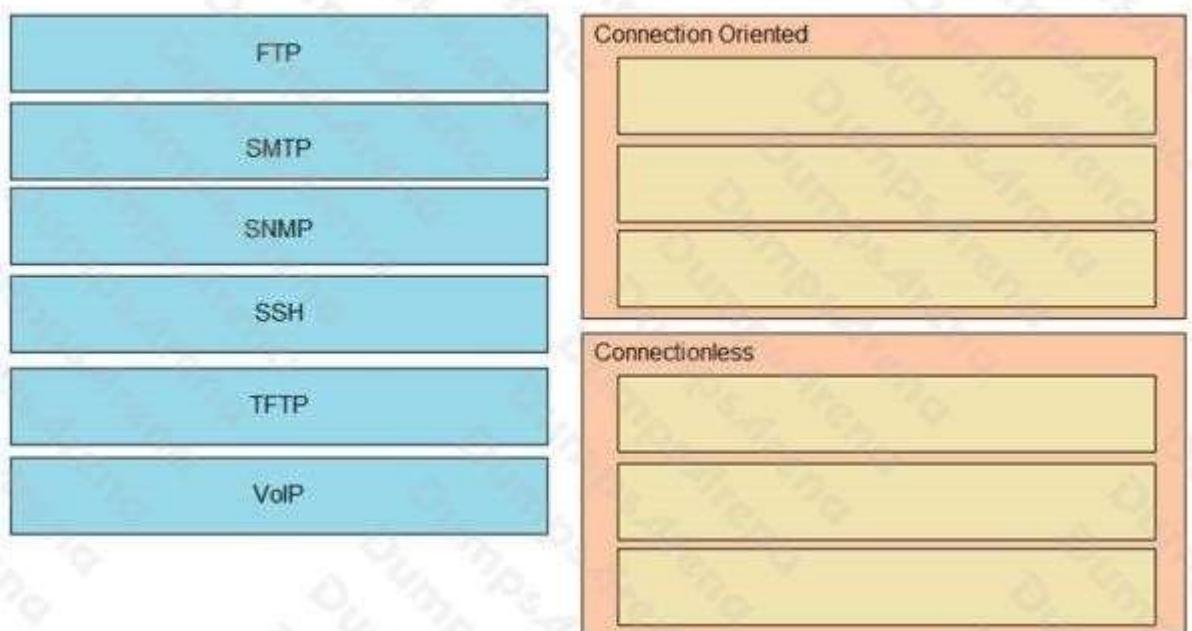

QUESTION 961

DRAG DROP

Drag and drop the network protocols from the left onto the correct transport services on the right.

Select and Place:

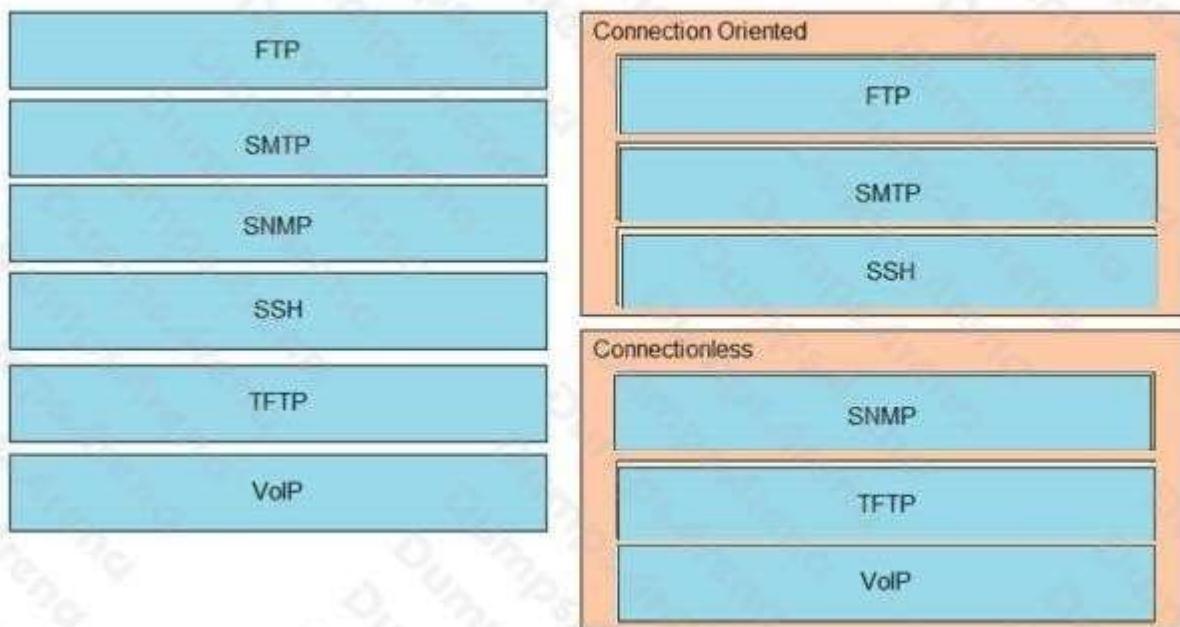

Answer Area

Answer:

A.

Answer Area

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 962

A network engineer must back up 20 network router configurations globally within a customer environment. Which protocol allows the engineer to perform this function using the Cisco IOS MIB?

- A. ARP
- B. SNMP
- C. SMTP
- D. CDP

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

SNMP is an application-layer protocol that provides a message format for communication between SNMP managers and agents. SNMP provides a standardized framework and a common language used for the monitoring and management of devices in a network.

The SNMP framework has three parts:

- An SNMP manager
- An SNMP agent
- A Management Information Base (MIB)

The Management Information Base (MIB) is a virtual information storage area for network management information, which consists of collections of managed objects.

With SNMP, the network administrator can send commands to multiple routers to do the backup.

QUESTION 963

Which command enables a router to become a DHCP client?

- A. ip address dhcp
- B. ip dhcp client
- C. ip helper-address
- D. ip dhcp pool

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

If we want to get an IP address from the DHCP server on a Cisco device, we can use the command "ip address dhcp".

Note: The command "ip helper-address" enables a router to become a DHCP Relay Agent.

QUESTION 964

Which function does an SNMP agent perform?

- A. It sends information about MIB variables in response to requests from the NMS
- B. It manages routing between Layer 3 devices in a network
- C. It coordinates user authentication between a network device and a TACACS+ or RADIUS server
- D. It requests information from remote network nodes about catastrophic system events

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 965

What are two roles of the Dynamic Host Configuration Protocol (DHCP)? (Choose two.)

- A. The DHCP server assigns IP addresses without requiring the client to renew them.
- B. The DHCP server leases client IP addresses dynamically.
- C. The DHCP client is able to request up to four DNS server addresses.
- D. The DHCP server offers the ability to exclude specific IP addresses from a pool of IP addresses.
- E. The DHCP client maintains a pool of IP addresses it is able to assign.

Correct Answer: BD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 966

Which command must be entered when a device is configured as an NTP server?

- A. ntp peer
- B. ntp master
- C. ntp authenticate
- D. ntp server

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 967

What event has occurred if a router sends a notice level message to a syslog server?

- A. A certificate has expired

- B. An interface line has changed status
- C. A TCP connection has been torn down
- D. An ICMP connection has been built

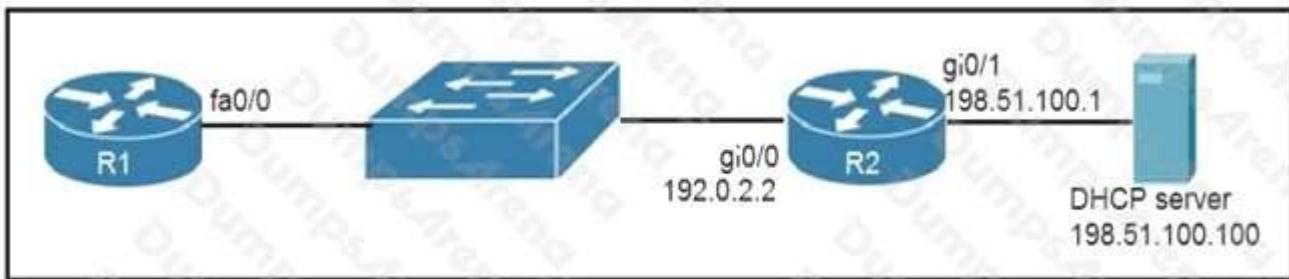

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 968

Refer to the exhibit. An engineer deploys a topology in which R1 obtains its IP configuration from DHCP. If the switch and DHCP server configurations are complete and correct, which two sets of commands must be configured on R1 and R2 to complete the task? (Choose two.)

- A. R1(config)# interface fa0/0
R1(config-if)# ip helper-address 198.51.100.100
- B. R2(config)# interface gi0/0
R2(config-if)# ip helper-address 198.51.100.100
- C. R1(config)# interface fa0/0 R1(config-if)# ip address dhcp
R1(config-if)# no shutdown
- D. R2(config)# interface gi0/0 R2(config-if)# ip address dhcp
- E. R1(config)# interface fa0/0
R1(config-if)# ip helper-address 192.0.2.2

Correct Answer: BC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 969

Which two actions are performed by the Weighted Random Early Detection mechanism? (Choose two.)

- A. It supports protocol discovery.
- B. It guarantees the delivery of high-priority packets.
- C. It can identify different flows with a high level of granularity.

- D. It can mitigate congestion by preventing the queue from filling up.
- E. It drops lower-priority packets before it drops higher-priority packets.

Correct Answer: DE

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Weighted Random Early Detection (WRED) is just a congestion avoidance mechanism. WRED drops packets selectively based on IP precedence. Edge routers assign IP precedences to packets as they enter the network. When a packet arrives, the following events occur:

1. The average queue size is calculated.
2. If the average is less than the minimum queue threshold, the arriving packet is queued.
3. If the average is between the minimum queue threshold for that type of traffic and the maximum threshold for the interface, the packet is either dropped or queued, depending on the packet drop probability for that type of traffic.
4. If the average queue size is greater than the maximum threshold, the packet is dropped.

WRED reduces the chances of tail drop (when the queue is full, the packet is dropped) by selectively dropping packets when the output interface begins to show signs of congestion (thus it can mitigate congestion by preventing the queue from filling up). By dropping some packets early rather than waiting until the queue is full, WRED avoids dropping large numbers of packets at once and minimizes the chances of global synchronization. Thus, WRED allows the transmission line to be used fully at all times.

WRED generally drops packets selectively based on IP precedence. Packets with a higher IP precedence are less likely to be dropped than packets with a lower precedence. Thus, the higher the priority of a packet, the higher the probability that the packet will be delivered.

Reference: https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/qos_conavd/configuration/15-mt/qos-conavd-15-mt-book/qos-conavd-cfg-wred.html

QUESTION 970

R2#show ip nat translations				
Protocol	Inside global	Inside local	Outside local	Outside global
tcp	172.23.104.3:43268	10.4.4.4:43268	172.23.103.10:23	172.23.103.10:23
tcp	172.23.104.4:45507	10.4.4.5:45507	172.23.103.10:80	172.23.103.10:80

Refer to the exhibit. An engineer configured NAT translations and has verified that the configuration is correct. Which IP address is the source IP after the NAT has taken place?

- A. 10.4.4.4
- B. 10.4.4.5
- C. 172.23.103.10
- D. 172.23.104.4

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:**QUESTION 971**

If a notice-level message is sent to a syslog server, which event has occurred?

- A. A network device has restarted.
- B. A debug operation is running.
- C. A routing instance has flapped.
- D. An ARP inspection has failed.

Correct Answer: C**Section:** (none)**Explanation****Explanation/Reference:**

Usually no action is required when a route flaps so it generates the notification syslog level message (level 5).

QUESTION 972**DRAG DROP**

Drag and drop the functions from the left onto the correct network components on the right.

Select and Place:

Answer Area

resolves web URLs to IP addresses

assigns a default gateway to a client

holds the TCP/IP settings to be distributed to the clients

stores a list of IP addresses mapped to names

assigns IP addresses to enabled clients

DHCP Server

DNS Server

Answer:

A.

Answer Area

- resolves web URLs to IP addresses
- assigns a default gateway to a client
- holds the TCP/IP settings to be distributed to the clients
- stores a list of IP addresses mapped to names
- assigns IP addresses to enabled clients

DHCP Server

- assigns a default gateway to a client
- holds the TCP/IP settings to be distributed to the clients
- assigns IP addresses to enabled clients

DNS Server

- resolves web URLs to IP addresses
- stores a list of IP addresses mapped to names

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 973

Which two tasks must be performed to configure NTP to a trusted server in client mode on a single network device? (Choose two.)

- A. Enable NTP authentication.
- B. Verify the time zone.
- C. Specify the IP address of the NTP server.
- D. Set the NTP server private key.
- E. Disable NTP broadcasts.

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

Explanation:

To configure authentication, perform this task in privileged mode:

Step 1: Configure an authentication key pair for NTP and specify whether the key will be trusted or untrusted.

Step 2: Set the IP address of the NTP server and the public key.

Step 3: Enable NTP client mode.

Step 4: Enable NTP authentication.

Step 5: Verify the NTP configuration.

QUESTION 974

What is the primary purpose of a First Hop Redundancy Protocol?

- A. It allows directly connected neighbors to share configuration information
- B. It reduces routing failures by allowing Layer 3 load balancing between OSPF neighbors that have the same link metric
- C. It allows a router to use bridge priorities to create multiple loop-free paths to a single destination
- D. It reduces routing failures by allowing more than one router to represent itself as the default gateway of a network

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 975

An engineer is configuring NAT to translate the source subnet of 10.10.0.0/24 to any one of three addresses: 192.168.3.1, 192.168.3.2, or 192.168.3.3. Which configuration should be used?

- A. enable configure terminal
ip nat pool mypool 192.168.3.1 192.168.3.3 prefix-length 30 access-list 1 permit 10.10.0.0 0.0.0.255 ip nat outside destination list 1 pool mypool interface g1/1 ip nat inside interface g1/2 ip nat outside
- B. enable configure terminal
ip nat pool mypool 192.168.3.1 192.168.3.3 prefix-length 30 access-list 1 permit 10.10.0.0 0.0.0.254 ip nat inside source list 1 pool mypool interface g1/1 ip nat inside interface g1/2 ip nat outside
- C. enable configure terminal
ip nat pool mypool 192.168.3.1 192.168.3.3 prefix-length 30 route map permit 10.10.0.0 255.255.255.0 ip nat outside destination list 1 pool mypool interface g1/1 ip nat inside interface g1/2 ip nat outside
- D. enable configure terminal
ip nat pool mypool 192.168.3.1 192.168.3.3 prefix-length 30 access-list 1 permit 10.10.0.0 0.0.0.255 ip nat inside source list 1 pool mypool interface g1/1 ip nat inside interface g1/2 ip nat outside

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 976

When the active router in an HSRP group fails, which router assumes the role and forwards packets?

- A. forwarding
- B. listening
- C. standby

D. backup

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 977

What protocol allows an engineer to back up 20 network router configurations globally while using the copy function?

- A. TCP
- B. SMTP
- C. FTP
- D. SNMP

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 978

Which type of address is the public IP address of a NAT device?

- A. outside global
- B. outside local
- C. inside global
- D. inside local
- E. outside public
- F. inside public

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

NAT use four types of addresses:

Inside local address - The IP address assigned to a host on the inside network. The address is usually not an IP address

assigned by the Internet Network Information Center (InterNIC) or service provider. This address is likely to be an RFC 1918 private address.

Inside global address - A legitimate IP address assigned by the InterNIC or service provider that represents one or more

inside local IP addresses to the outside world.

Outside local address - The IP address of an outside host as it is known to the hosts on the inside network.

Outside global address - The IP address assigned to a host on the outside network. The owner of the host assigns this

address.

QUESTION 979

Which two pieces of information can you determine from the output of the show ntp status command? (Choose two.)

- A. whether the NTP peer is statically configured
- B. the IP address of the peer to which the clock is synchronized
- C. the configured NTP servers
- D. whether the clock is synchronized
- E. the NTP version number of the peer

Correct Answer: BD

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Below is the output of the "show ntp status" command. From this output we learn that R1 has a stratum of 10 and it is getting clock from 10.1.2.1.

```
R1#show ntp status
Clock is synchronized, stratum 10, reference is 10.1.2.1
nominal freq is 250.0000 Hz, actual freq is 249.9987 Hz, precision is 2**18
reference time is D5E492E9.98ACB4CF (13:00:25.596 CST Wed Sep 18 2013)
clock offset is 15.4356 msec, root delay is 52.17 msec
root dispersion is 67.61 msec, peer dispersion is 28.12 msec
```

QUESTION 980

Which keyword in a NAT configuration enables the use of one outside IP address for multiple inside hosts?

- A. source
- B. static
- C. pool
- D. overload

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

By adding the keyword "overload" at the end of a NAT statement, NAT becomes PAT (Port Address Translation). This is also a kind of dynamic NAT that maps multiple private IP addresses to a single public IP address (many-to-one) by using different ports. Static NAT and Dynamic NAT both require a one-to-one mapping from the inside local to the inside global address. By using PAT, you can have thousands of users connect to the Internet using only one real global IP address. PAT is the technology that helps us not run out of public IP address on the Internet. This is the most popular type of NAT.

An example of using "overload" keyword is shown below:

```
R1(config)# ip nat inside source list 1 interface ethernet1 overload
```

QUESTION 981

Which feature or protocol determines whether the QoS on the network is sufficient to support IP services?

- A. LLDP
- B. CDP
- C. IP SLA
- D. EEM

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

IP SLA allows an IT professional to collect information about network performance in real time. Therefore it helps determine whether the QoS on the network is sufficient for IP services or not.

Cisco IOS Embedded Event Manager (EEM) is a powerful and flexible subsystem that provides real-time network event detection and onboard automation. It gives you the ability to adapt the behavior of your network devices to align with your business needs.

QUESTION 982

In QoS, which prioritization method is appropriate for interactive voice and video?

- A. traffic policing
- B. round-robin scheduling
- C. low-latency queuing
- D. expedited forwarding

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:**QUESTION 983**

- (DRAG DROP)

Drag and drop the SNMP components from the left onto the descriptions on the right.

Select and Place:

Answer Area

MIB
SNMP agent
SNMP manager
SNMP trap

collection of variables that can be monitored
unsolicited message
responds to status requests and requests for information about a device
resides on an NMS

Answer:

A.

Answer Area

MIB
SNMP agent
SNMP manager
SNMP trap

MIB
SNMP trap
SNMP agent
SNMP manager

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 984

What is the purpose of traffic shaping?

- A. to be a marking mechanism that identifies different flows
- B. to provide fair queuing for buffered flows
- C. to mitigate delays over slow links
- D. to limit the bandwidth that a flow can use

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

The primary reasons you would use traffic shaping are to control access to available bandwidth, to ensure that traffic conforms to the policies established for it, and to regulate the flow of traffic in order to avoid congestion that can occur when the sent traffic exceeds the access speed of its remote, target interface.

QUESTION 985

What is a function of TFTP in network operations?

- A. transfers IOS images from a server to a router for firmware upgrades
- B. transfers a backup configuration file from a server to a switch using a username and password
- C. transfers a configuration files from a server to a router on a congested link
- D. transfers files between file systems on a router

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 986

What is a DHCP client?

- A. a workstation that requests a domain name associated with its IP address
- B. a host that is configured to request an IP address automatically
- C. a server that dynamically assigns IP addresses to hosts.
- D. a router that statically assigns IP addresses to hosts.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 987

Where does the configuration reside when a helper address is configured to support DHCP?

- A. on the router closest to the server
- B. on the router closest to the client
- C. on every router along the path
- D. on the switch trunk interface

Correct Answer: B

Section: (none)

- C. TFTP
- D. DTP

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 997

Which condition must be met before an NMS handles an SNMP trap from an agent?

- A. The NMS must receive the same trap from two different SNMP agents to verify that it is reliable.
- B. The NMS must receive a trap and an inform message from the SNMP agent within a configured interval.
- C. The NMS software must be loaded with the MIB associated with the trap.
- D. The NMS must be configured on the same router as the SNMP agent.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Exam B

QUESTION 1

What protocol allows an engineer to back up 20 network router configurations globally while using the copy function?

- A. TCP
- B. SMTP
- C. FTP
- D. SNMP

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 2

Which type of address is the public IP address of a NAT device?

- A. outside global
- B. outside local
- C. inside global
- D. inside local
- E. outside public
- F. inside public

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

NAT use four types of addresses:

Inside local address - The IP address assigned to a host on the inside network. The address is usually not an IP address

assigned by the Internet Network Information Center (InterNIC) or service provider. This address is likely to be an RFC 1918 private address.

Inside global address - A legitimate IP address assigned by the InterNIC or service provider that represents one or more

inside local IP addresses to the outside world.

Outside local address - The IP address of an outside host as it is known to the hosts on the inside network.

Outside global address - The IP address assigned to a host on the outside network. The owner of the host assigns this

address.

QUESTION 3

Which two pieces of information can you determine from the output of the show ntp status command? (Choose two.)

- A. whether the NTP peer is statically configured
- B. the IP address of the peer to which the clock is synchronized
- C. the configured NTP servers
- D. whether the clock is synchronized
- E. the NTP version number of the peer

Correct Answer: BD

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Below is the output of the "show ntp status" command. From this output we learn that R1 has a stratum of 10 and it is getting clock from 10.1.2.1.

```
R1#show ntp status
Clock is synchronized, stratum 10, reference is 10.1.2.1
nominal freq is 250.0000 Hz, actual freq is 249.9987 Hz, precision is 2**18
reference time is D5E492E9.98ACB4CF (13:00:25.596 CST Wed Sep 18 2013)
clock offset is 15.4356 msec, root delay is 52.17 msec
root dispersion is 67.61 msec, peer dispersion is 28.12 msec
```

QUESTION 4

Which keyword in a NAT configuration enables the use of one outside IP address for multiple inside hosts?

- A. source
- B. static
- C. pool
- D. overload

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

By adding the keyword "overload" at the end of a NAT statement, NAT becomes PAT (Port Address Translation). This is also a kind of dynamic NAT that maps multiple private IP addresses to a single public IP address (many-to-one) by using different ports. Static NAT and Dynamic NAT both require a one-to-one mapping from the inside local to the inside global address. By using PAT, you can have thousands of users connect to the Internet using only one real global IP address. PAT is the technology that helps us not run out of public IP address on the Internet. This is the most popular type of NAT.

An example of using "overload" keyword is shown below:

```
R1(config)# ip nat inside source list 1 interface ethernet1 overload
```

QUESTION 5

Which feature or protocol determines whether the QOS on the network is sufficient to support IP services?

- A. LLDP
- B. CDP
- C. IP SLA
- D. EEM

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

IP SLA allows an IT professional to collect information about network performance in real time. Therefore it helps determine whether the QoS on the network is sufficient for IP services or not.

Cisco IOS Embedded Event Manager (EEM) is a powerful and flexible subsystem that provides real-time network event detection and onboard automation. It gives you the ability to adapt the behavior of your network devices to align with your business needs.

QUESTION 6

In QoS, which prioritization method is appropriate for interactive voice and video?

- A. traffic policing
- B. round-robin scheduling
- C. low-latency queuing
- D. expedited forwarding

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 7

- (DRAG DROP)

Drag and drop the SNMP components from the left onto the descriptions on the right.

Select and Place:

Answer Area

MIB
SNMP agent
SNMP manager
SNMP trap

collection of variables that can be monitored
unsolicited message
responds to status requests and requests for information about a device
resides on an NMS

Answer:

A.

Answer Area

MIB
SNMP agent
SNMP manager
SNMP trap

MIB
SNMP trap
SNMP agent
SNMP manager

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 8

What is the purpose of traffic shaping?

- A. to be a marking mechanism that identifies different flows
- B. to provide fair queuing for buffered flows
- C. to mitigate delays over slow links
- D. to limit the bandwidth that a flow can use

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

The primary reasons you would use traffic shaping are to control access to available bandwidth, to ensure that traffic conforms to the policies established for it, and to regulate the flow of traffic in order to avoid congestion that can occur when the sent traffic exceeds the access speed of its remote, target interface.

QUESTION 9

What is a function of TFTP in network operations?

- A. transfers IOS images from a server to a router for firmware upgrades
- B. transfers a backup configuration file from a server to a switch using a username and password
- C. transfers a configuration files from a server to a router on a congested link
- D. transfers files between file systems on a router

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 10

What is a DHCP client?

- A. a workstation that requests a domain name associated with its IP address
- B. a host that is configured to request an IP address automatically
- C. a server that dynamically assigns IP addresses to hosts.
- D. a router that statically assigns IP addresses to hosts.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 11

Where does the configuration reside when a helper address is configured to support DHCP?

- A. on the router closest to the server
- B. on the router closest to the client
- C. on every router along the path
- D. on the switch trunk interface

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 12

What facilitates a Telnet connection between devices by entering the device name?

- A. SNMP

- B. DNS lookup
- C. syslog
- D. NTP

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 13

When deploying syslog, which severity level logs informational messages?

- A. 0
- B. 2
- C. 4
- D. 6

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

<https://en.wikipedia.org/wiki/Syslog>

QUESTION 14

DRAG DROP

e0 s0

Web server

172.16.1.2

interface Ethernet0

A

B

interface Serial0

C

D

E

F

access-list 1 permit 172.16.1.0 0.0.0.255

Refer to the exhibit. An engineer is configuring the router to provide static NAT for the webserver. Drag and drop the configuration commands from the left onto the letters that correspond to its position in the configuration on the right.

Select and Place:

ip address 172.16.1.1 255.255.255.0	position A
ip address 45.83.2.214 255.255.255.240	position B
ip nat inside	position C
ip nat inside source list 1 interface s0 overload	position D
ip nat inside source static tcp 172.16.1.2 80 45.83.2.214 80 extendable	position E
ip nat outside	position F

Answer:

A.

ip address 172.16.1.1 255.255.255.0	ip address 172.16.1.1 255.255.255.0
ip address 45.83.2.214 255.255.255.240	ip nat inside
ip nat inside	ip address 45.83.2.214 255.255.255.240
ip nat inside source list 1 interface s0 overload	ip nat outside
ip nat inside source static tcp 172.16.1.2 80 45.83.2.214 80 extendable	ip nat inside source static tcp 172.16.1.2 80 45.83.2.214 80 extendable
ip nat outside	ip nat inside source list 1 interface s0 overload

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 15

Which two QoS tools provide congestion management? (Choose two.)

- A. CBWFQ
- B. FRTS
- C. CAR
- D. PBR
- E. PQ

Correct Answer: AE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 16

Which QoS tool is used to optimize voice traffic on a network that is primarily intended for data traffic?

- A. WRED
- B. FIFO
- C. WFQ
- D. PQ

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 17

An engineer is installing a new wireless printer with a static IP address on the Wi-Fi network. Which feature must be enabled and configured to prevent connection issues with the printer?

- A. client exclusion
- B. DHCP address assignment
- C. passive client
- D. static IP tunneling

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 18

When a client and server are not on the same physical network, which device is used to forward requests and replies between client and server for DHCP?

- A. DHCPOFFER
- B. DHCP relay agent
- C. DHCP server
- D. DHCPDISCOVER

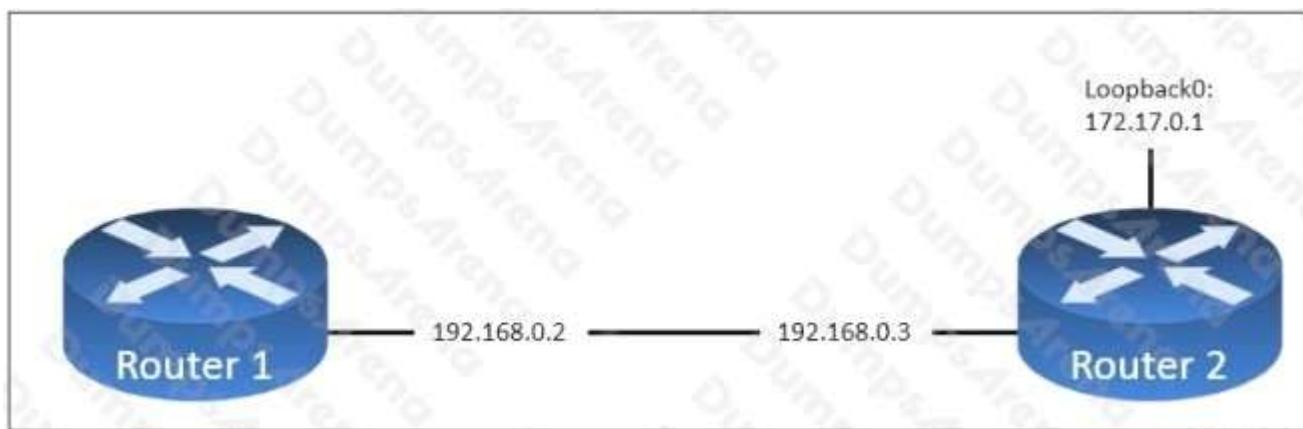

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 19

Refer to the exhibit. The ntp server 192.168.0.3 command has been configured on router 1 to make it an NTP client of router

2. Which command must be configured on router 2 so that it operates in server-only mode and relies only on its internal clock?

- A. Router2(config)#ntp server 172.17.0.1
- B. Router2(config)#ntp server 192.168.0.2
- C. Router2(config)#ntp passive
- D. Router2(config)#ntp master 4

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 20

Which protocol requires authentication to transfer a backup configuration file from a router to a remote server?

- A. FTP
- B. SMTP
- C. TFTP
- D. DTP

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 21

Which condition must be met before an NMS handles an SNMP trap from an agent?

- A. The NMS must receive the same trap from two different SNMP agents to verify that it is reliable.
- B. The NMS must receive a trap and an inform message from the SNMP agent within a configured interval.
- C. The NMS software must be loaded with the MIB associated with the trap.
- D. The NMS must be configured on the same router as the SNMP agent.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 22

An engineer is configuring switch SW1 to act as an NTP server when all upstream NTP server connectivity fails. Which configuration must be used?

- A. SW1# config t
SW1(config)#ntp peer 192.168.1.1
SW1(config)#ntp access-group peer accesslist1
- B. SW1# config t
SW1(config)#ntp master
SW1(config)#ntp server192.168.1.1
- C. SW1# config t
SW1(config)#ntp backup
SW1(config)#ntp server192.168.1.1
- D. SW1# config t
SW1(config)#ntp server192.168.1.1
SW1(config)#ntp access-group peer accesslist1

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 23

A network administrator must enable DHCP services between two sites. What must be configured for the router to pass DHCPDISCOVER messages on to the server?

- A. DHCP Binding
- B. a DHCP Relay Agent
- C. DHCP Snooping

D. a DHCP Pool

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 24

Which level of severity must be set to get informational syslogs?

- A. alert
- B. critical
- C. notice
- D. debug

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 25

On workstations running Microsoft Windows, which protocol provides the default gateway for the device?

- A. STP
- B. DHCP
- C. SNMP
- D. DNS

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 26

Which two statements about NTP operations are true? (Choose two.)

- A. NTP uses UDP over IP.
- B. Cisco routers can act as both NTP authoritative servers and NTP clients.
- C. Cisco routers can act only as NTP servers.
- D. Cisco routers can act only as NTP clients.
- E. NTP uses TCP over IP.

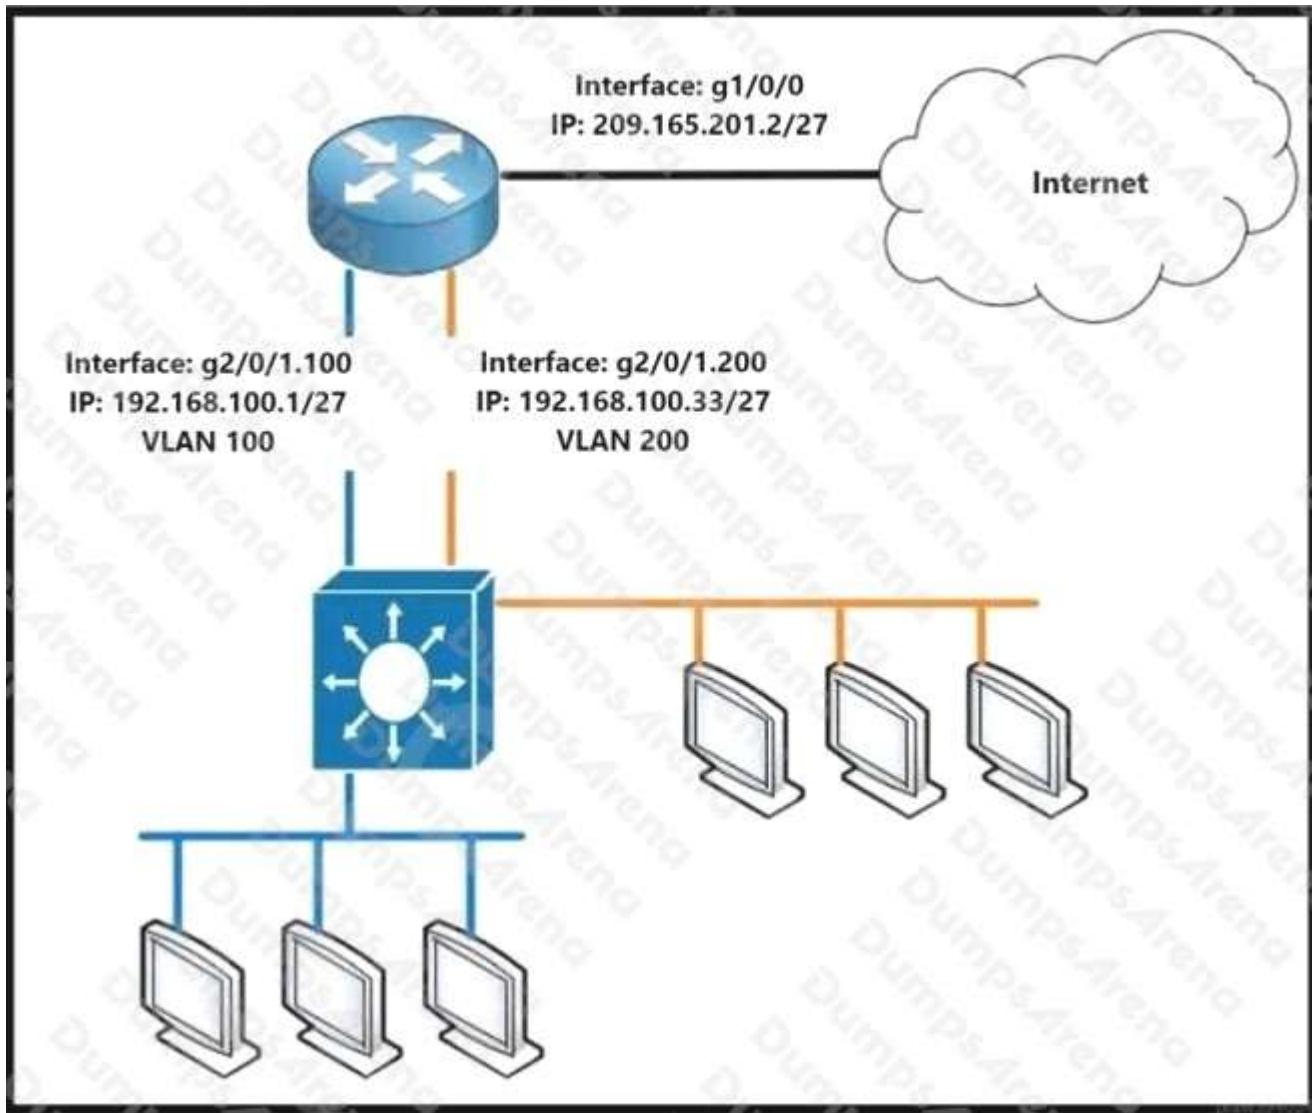

Correct Answer: AB

Section: (none)

Explanation

Explanation/Reference:

QUESTION 27

Refer to the exhibit. Which configuration must be applied to the router that configures PAT to translate all addresses in VLAN 200 while allowing devices on VLAN 100 to use their own IP addresses?

- A. Router1(config)#access-list 99 permit 192.168.100.32 0.0.0.31 Router1(config)#ip nat inside source list 99 interface gi1/0/0 overload
Router1(config)#interface gi2/0/1.200
Router1(config)#ip nat inside
Router1(config)#interface gi1/0/0
Router1(config)#ip nat outside
- B. Router1(config)#access-list 99 permit 192.168.100.0 0.0.0.255 Router1(config)#ip nat inside source list 99 interface gi1/0/0 overload
Router1(config)#interface gi2/0/1.200
Router1(config)#ip nat inside
Router1(config)#interface gi1/0/0
Router1(config)#ip nat outside

- C. Router1(config)#access-list 99 permit 209.165.201.2 255.255.255.255 Router1(config)#ip nat inside source list 99 interface gi1/0/0 overload
Router1(config)#interface gi2/0/1.200
Router1(config)#ip nat inside
Router1(config)#interface gi1/0/0
Router1(config)#ip nat outside
- D. Router1(config)#access- list 99 permit 209.165.201.2 0.0.0.0
Router1(config)#ip nat inside source list 99 interface gi1/0/0 overload Router1(config)#interface gi2/0/1.200
Router1(config)#ip nat inside
Router1(config)#interface gi1/0/0
Router1(config)#ip nat outside

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 28

```
R1#show run
Building configuration...
!
hostname R1
!
username CNAC password 0 cona123
!
ip domain-name CNAC.com
!
interface GigabitEthernet0/0/0
  ip address 192.168.1.10 255.255.255.0
  duplex auto
  speed auto
!
line vty 0 15
  login local

R1#show crypto key mypubkey rsa

R1#show ssh
%No SSHv2 server connections running.
%No SSHv1 server connections running.
```

Refer to the exhibit. Which two commands must be added to update the configuration of router R1 so that it accepts only encrypted connections? (Choose two.)

- A. transport input ssh
- B. username CNAC secret R!41!3705926@
- C. crypto key generate rsa 1024
- D. line vty 0 4
- E. ip ssh

QUESTION 30

R1 as an NTP server must have:

NTP authentication enabled

NTP packets sourced from Interface loopback 0

NTP stratum 2

NTP packets only permitted to client IP 209.165.200.225

How should R1 be configured?

- A. ntp authenticate ntp authentication-key 2 sha1 CISCO123 ntp source Loopback0 ntp access-group server-only 10 ntp master 2
!
access-list 10 permit udp host 209.165.200.225 any eq 123
- B. ntp authenticate ntp authentication-key 2 md5 CISCO123 ntp interface Loopback0 ntp access-group server-only 10 ntp stratum 2
!
access-list 10 permit 209.165.200.225
- C. ntp authenticate ntp authentication-key 2 md5 CISCO123 ntp source Loopback0 ntp access-group server-only 10 ntp master 2
!
access-list 10 permit 209.165.200.225
- D. ntp authenticate ntp authentication-key 2 md5 CISCO123 ntp source Loopback0 ntp access-group server-only 10 ntp stratum 2
!
access-list 10 permit udp host 209.165.200.225 any eq 123

Correct Answer: C

Section: (none)**Explanation****Explanation/Reference:****QUESTION 31**

What is a capability of FTP in network management operations?

- A. offers proprietary support at the session layer when transferring data
- B. uses separate control and data connections to move files between server and client
- C. encrypts data before sending between data resources
- D. devices are directly connected and use UDP to pass file information

Correct Answer: B

Section: (none)**Explanation****Explanation/Reference:**

[https://en.wikipedia.org/wiki/File_Transfer_Protocol#:~:text=The%20File%20Transfer%20Protocol%20\(FTP,the%20client%20and%20the%20server](https://en.wikipedia.org/wiki/File_Transfer_Protocol#:~:text=The%20File%20Transfer%20Protocol%20(FTP,the%20client%20and%20the%20server)

QUESTION 32

A network engineer is configuring a switch so that it is remotely reachable via SSH. The engineer has already configured the host name on the router. Which additional command must the engineer configure before entering the command to generate the RSA key?

- A. password password
- B. ip ssh authentication-retries 2
- C. ip domain-name domain
- D. crypto key generate rsa modulus 1024

Correct Answer: C

Section: (none)**Explanation****Explanation/Reference:**

<https://www.letsconfig.com/how-to-configure-ssh-on-cisco-ios-devices/>

QUESTION 33

Which QoS traffic handling technique retains excess packets in a queue and reschedules these packets for later transmission when the configured maximum bandwidth has been surpassed?

- A. traffic policing
- B. weighted random early detection
- C. traffic prioritization
- D. traffic shaping

Correct Answer: D

Section: (none)**Explanation****Explanation/Reference:**

<https://www.cisco.com/c/en/us/support/docs/quality-of-service-qos/qos-policing/19645-policevsshape.html>

QUESTION 34

Which command must be entered to configure a DHCP relay?

- A. ip dhcp relay
- B. ip dhcp pool
- C. ip address dhcp
- D. ip helper-address

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

https://www.cisco.com/en/US/docs/ios/12_4t/ip_addr/configuration/guide/htdhcpre.html#:~:text=ip%20helper%20address%20address,-Example%3A&text=Forwards%20UPD%20broadcasts%2C%20including%20BOOTP%20and%20DHCP.&text=The%20address%20argument%20can%20be,to%20respond%20to%20DHCP%20requests

QUESTION 35

An organization secures its network with multi-factor authentication using an authenticator app on employee smartphones. How is the application secured in the case of a user's smartphone being lost or stolen?

- A. The application requires the user to enter a PIN before it provides the second factor
- B. The application requires an administrator password to reactivate after a configured interval
- C. The application verifies that the user is in a specific location before it provides the second factor
- D. The application challenges a user by requiring an administrator password to reactivate when the smartphone is rebooted

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 36

Which device performs stateful inspection of traffic?

- A. switch
- B. firewall
- C. access point
- D. wireless controller

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 37

A network administrator enabled port security on a switch interface connected to a printer. What is the next configuration action in order to allow the port to learn the MAC address of the printer and insert it into the table automatically?

- A. enable dynamic MAC address learning

- B. implement static MAC addressing
- C. enable sticky MAC addressing
- D. implement auto MAC address learning

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 38

```
Switch(config)#hostname R1
R1(config)#interface FastEthernet0/1
R1(config-if)#no switchport
R1(config-if)#ip address 10.100.20.42 255.255.255.0
R1(config-if)#line vty 0 4
R1(config-line)#login
```

Refer to the exhibit. An engineer booted a new switch and applied this configuration via the console port. Which additional configuration must be applied to allow administrators to authenticate directly to enable privilege mode via Telnet using a local username and password?

- A. R1(config)#username admin
R1(config-if)#line vty 0 4
R1(config-line)#password p@ss1234
R1(config-line)#transport input telnet
- B. R1(config)#username admin privilege 15 secret p@ss1234
R1(config-if)#line vty 0 4
R1(config-line)#login local
- C. R1(config)#username admin secret p@ss1234
R1(config-if)#line vty 0 4
R1(config-line)#login local
R1(config)#enable secret p@ss1234
- D. R1(config)#username admin
R1(config-if)#line vty 0 4
R1(config-line)#password p@ss1234

Correct Answer: B

Explanation/Reference:

QUESTION 39

Which effect does the aaa new-model configuration command have?

- A. It enables AAA services on the device.
- B. It configures the device to connect to a RADIUS server for AAA.
- C. It associates a RADIUS server to the group.
- D. It configures a local user on the device.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 40

Refer to the exhibit. Which two events occur on the interface, if packets from an unknown Source address arrive after the interface learns the maximum number of secure MAC address? (Choose two.)

```
Port Security : Enabled
Port Status : Secure-up
Violation Mode : Protect
Aging Time : 0 mins
Aging Type : Absolute
SecureStatic Address Aging : Disabled
Maximum MAC Addresses : 4
Total MAC Addresses : 3
Configured MAC Addresses: 1
Sticky MAC Addresses : 2
Last Source Address:Vlan : 0001:0fAA.33BB:1
Security Vioaltion Count : 0
```

- A. The security violation counter dose not increment
- B. The port LED turns off
- C. The interface is error-disabled
- D. A syslog message is generated
- E. The interface drops traffic from unknown MAC address

Correct Answer: AE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 41

Which technology must be implemented to configure network device monitoring with the highest security?

- A. IP SLA

- B. syslog
- C. NetFlow
- D. SNMPv3

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 42

Refer to the exhibit. Which two statements about the interface that generated the output are true? (Choose two.)

```
Port Security : Enabled
Port Status : Secure-up
Violation Mode : Protect
Aging Time : 5 mins
Aging Type : Inactivity
SecureStatic Addres Aging : Disabled
Maximum MAC Addresses : 3
Total MAC Addreses : 3
Configured MAC Addresses : 1
Sticky MAC Addresses : 2
Last Source Address : Vlan : 0001.0fAA.33BB:1
Security Violation Count : 0
```

- A. learned MAC addresses are deleted after five minutes of inactivity
- B. the interface is error-disabled if packets arrive from a new unknown source address
- C. it has dynamically learned two secure MAC addresses
- D. it has dynamically learned three secure MAC addresses
- E. the security violation counter increments if packets arrive from a new unknown source address

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 43

Refer to the exhibit. Which statement about the interface that generated the output is true?

Port Security	:	Enabled
Port Status	:	Secure-up
Violation Mode	:	Shutdown
Aging Time	:	0 mins
Aging Type	:	Absolute
SecureStatic Address Aging	:	Disabled
Maximum MAC Addresses	:	5
Total MAC Addresses	:	1
Configured MAC Addresses	:	1
Sticky MAC Addresses	:	0
Last Source Address : Vlan	:	0001.0fAA.33BB:1
Security Violation Count	:	0

- A. A syslog message is generated when a violation occurs.
- B. One secure MAC address is manually configured on the interface.
- C. One secure MAC address is dynamically learned on the interface.
- D. Five secure MAC addresses are dynamically learned on the interface.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 44

```
ip arp inspection vlan 2
interface fastethernet 0/1
    switchport mode access
    switchport access vlan 2
```

Refer to the exhibit. What is the effect of this configuration?

- A. The switch port remains administratively down until the interface is connected to another switch.
- B. Dynamic ARP Inspection is disabled because the ARP ACL is missing.
- C. The switch port interface trust state becomes untrusted.
- D. The switch port remains down until it is configured to trust or untrust incoming packets.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Dynamic ARP inspection (DAI) is a security feature that validates ARP packets in a network. It intercepts, logs, and discards ARP packets with invalid IP-to-MAC address bindings. This capability protects the network from certain man-in-the-middle attacks. After enabling DAI, all ports become untrusted ports.

QUESTION 45

What is the difference between AAA authentication and authorization?

- A. Authentication identifies and verifies a user who is attempting to access a system, and authorization controls the tasks the user performs.
- B. Authentication controls the system processes a user accesses, and authorization logs the activities the user initiates.
- C. Authentication verifies a username and password, and authorization handles the communication between the authentication agent and the user database.
- D. Authentication identifies a user who is attempting to access a system, and authorization validates the user's password.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

AAA stands for Authentication, Authorization and Accounting.

- Authentication: Specify who you are (usually via login username & password)
- Authorization: Specify what actions you can do, what resource you can access
- Accounting: Monitor what you do, how long you do it (can be used for billing and auditing)

An example of AAA is shown below:

- Authentication: "I am a normal user. My username/password is user_tom/learnforever"
- Authorization: "user_tom can access LearnCCNA server via HTTP and FTP"
- Accounting: "user_tom accessed LearnCCNA server for 2 hours". This user only uses "show" commands.

QUESTION 46

When configuring a WLAN with WPA2 PSK in the Cisco Wireless LAN Controller GUI, which two formats are available to select? (Choose two.)

- A. decimal
- B. ASCII
- C. hexadecimal
- D. binary
- E. base64

Correct Answer: BC

Section: (none)

Explanation

Explanation/Reference:

https://www.cisco.com/c/en/us/td/docs/wireless/controller/9800/config-guide/b_wl_16_10_cg/multi-preshared-key.pdf

QUESTION 47
DRAG DROP

Drag and drop the AAA functions from the left onto the correct AAA services on the right.

Select and Place:

Answer Area

- controls the actions that a user can perform
- provides analytical information for the network administrator
- records user activities
- restricts the services that are available to a user
- verifies the password associated with a user
- identifies the user

Authentication

-
-

Authorization

-
-

Accounting

-
-

Answer:

A.

Answer Area

- controls the actions that a user can perform
- provides analytical information for the network administrator
- records user activities
- restricts the services that are available to a user
- verifies the password associated with a user
- identifies the user

Authentication

- verifies the password associated with a user
- identifies the user

Authorization

- controls the actions that a user can perform
- restricts the services that are available to a user

Accounting

- provides analytical information for the network administrator
- records user activities

QUESTION 48

An engineer is asked to protect unused ports that are configured in the default VLAN on a switch. Which two steps will fulfill the request? (Choose two.)

- A. Configure the ports as trunk ports.
- B. Enable the Cisco Discovery Protocol.
- C. Configure the port type as access and place in VLAN 99.
- D. Administratively shut down the ports.
- E. Configure the ports in an EtherChannel.

Correct Answer: CD

Section: (none)

Explanation

Explanation/Reference:**QUESTION 49**

An email user has been lured into clicking a link in an email sent by their company's security organization. The webpage that opens reports that it was safe, but the link may have contained malicious code.

Which type of security program is in place?

- A. user awareness
- B. brute force attack
- C. physical access control
- D. social engineering attack

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

This is a training program which simulates an attack, not a real attack (as it says "The webpage that opens reports that it was safe") so we believed it should be called a "user awareness" program. Therefore the best answer here should be "user awareness". This is the definition of "User awareness" from CCNA 200-301 Official Cert Guide Book:

"User awareness: All users should be made aware of the need for data confidentiality to protect corporate information, as well as their own credentials and personal information. They should also be made aware of potential threats, schemes to mislead, and proper procedures to report security incidents. "

Note: Physical access control means infrastructure locations, such as network closets and data centers, should remain securely locked.

QUESTION 50

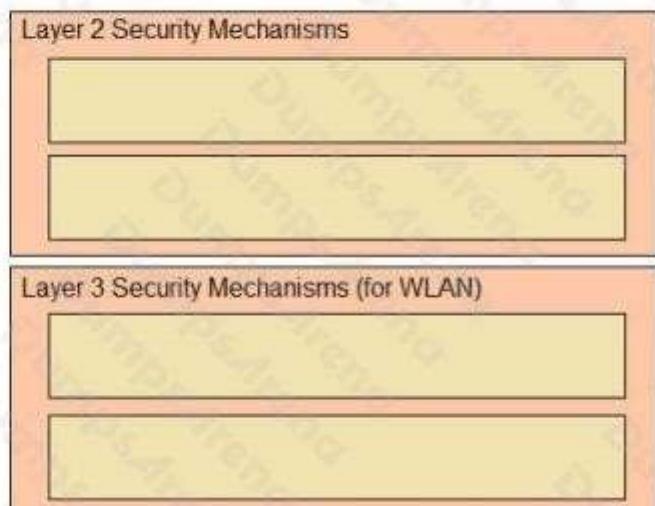

DRAG DROP

Drag and drop the Cisco Wireless LAN Controller security settings from the left onto the correct security mechanism categories on the right.

Select and Place:

Answer Area

web policy
Passthrough
WPA+WPA2
802.1X

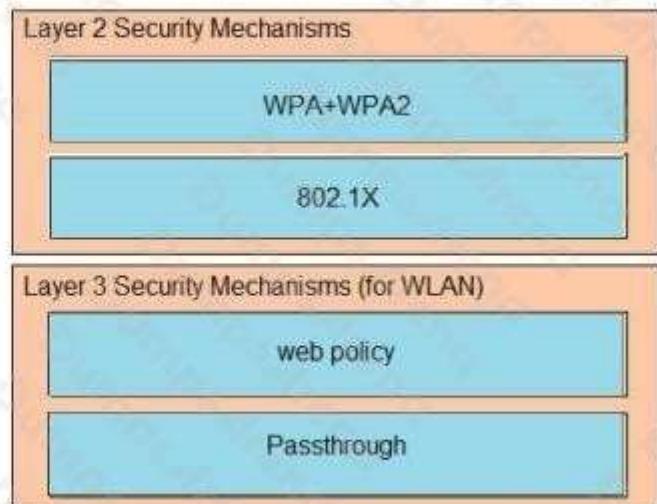

Answer:

A.

Answer Area

web policy
Passthrough
WPA+WPA2
802.1X

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Layer 2 Security Mechanism includes WPA+WPA2, 802.1X, Static WEP, CKIP while Layer 3 Security Mechanisms (for WLAN) includes IPSec, VPN Pass-Through, Web Passthrough ...

<https://www.cisco.com/c/en/us/support/docs/wireless/4400-series-wireless-lan-controllers/106082-wlc-compatibility-matrix.html>

QUESTION 51

Which feature on the Cisco Wireless LAN Controller when enabled restricts management access from specific networks?

- A. TACACS
- B. CPU ACL
- C. Flex ACL
- D. RADIUS

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Whenever you want to control which devices can talk to the main CPU, a CPU ACL is used.

Note: CPU ACLs only filter traffic towards the CPU, and not any traffic exiting or generated by the CPU.

Reference: <https://www.cisco.com/c/en/us/support/docs/wireless/4400-series-wireless-lan-controllers/109669-secure-wlc.html>

QUESTION 52

Which set of actions satisfy the requirement for multifactor authentication?

- A. The user enters a user name and password, and then re-enters the credentials on a second screen.
- B. The user swipes a key fob, then clicks through an email link.
- C. The user enters a user name and password, and then clicks a notification in an authentication app on a mobile device.
- D. The user enters a PIN into an RSA token, and then enters the displayed RSA key on a login screen.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

This is an example of how two-factor authentication (2FA) works:

1. The user logs in to the website or service with their username and password.
2. The password is validated by an authentication server and, if correct, the user becomes eligible for the second factor.
3. The authentication server sends a unique code to the user's second-factor method (such as a smartphone app).
4. The user confirms their identity by providing the additional authentication for their second-factor method.

QUESTION 53

Which configuration is needed to generate an RSA key for SSH on a router?

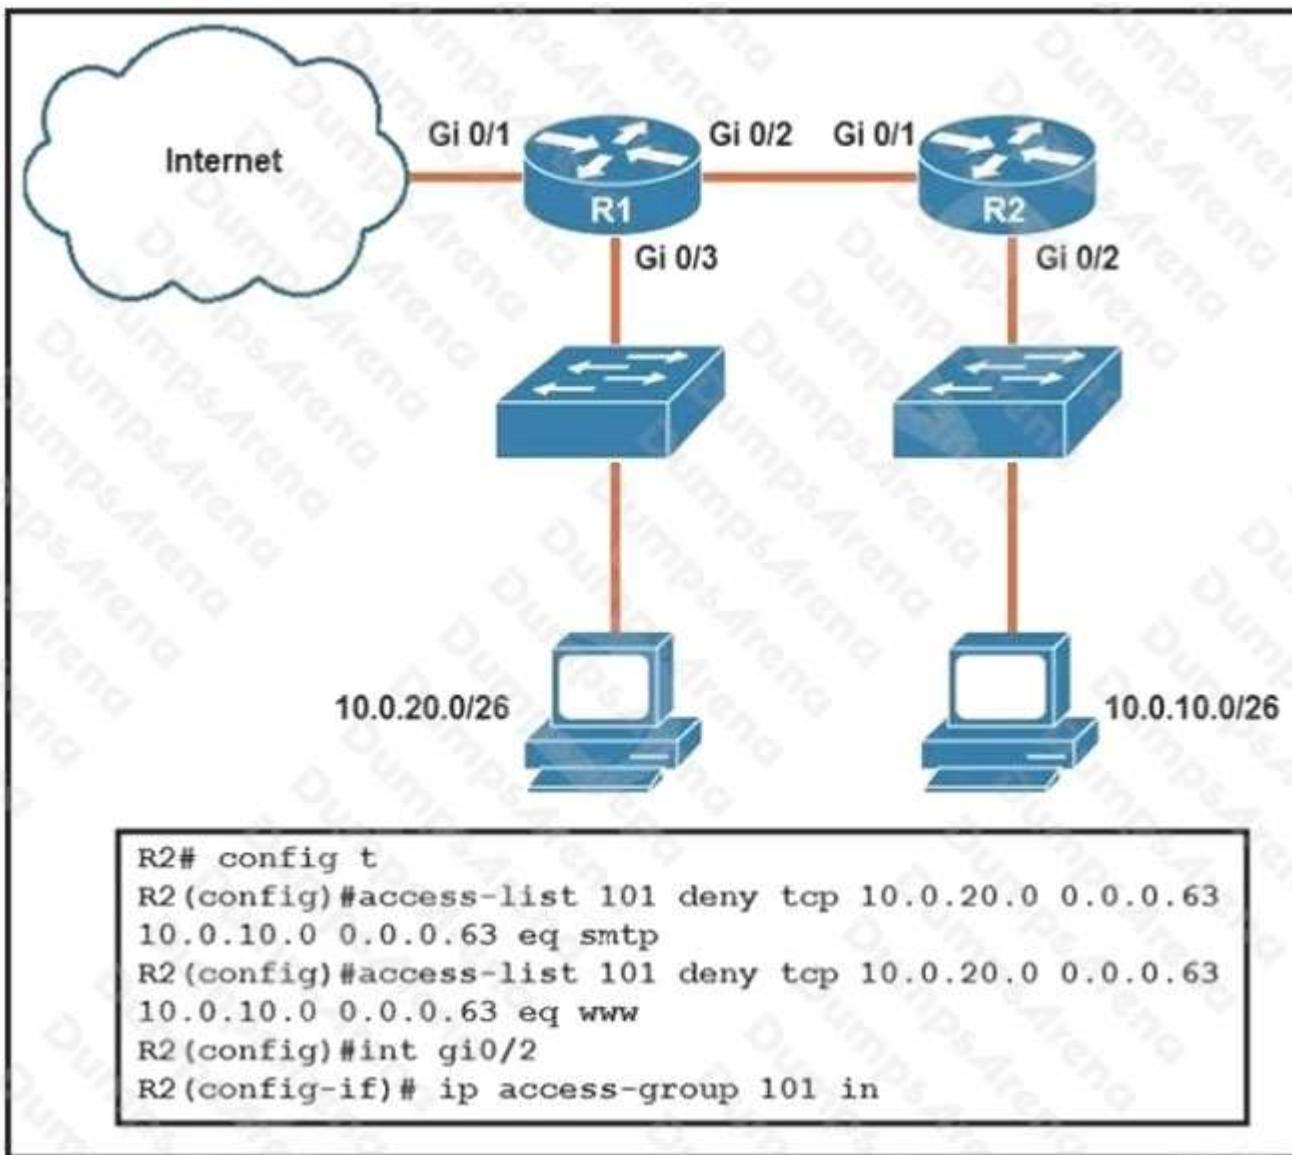

- A. Configure VTY access.
- B. Configure the version of SSH.
- C. Assign a DNS domain name.
- D. Create a user with a password.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 54

Refer to the exhibit. An extended ACL has been configured and applied to router R2. The configuration failed to

work as intended.

Which two changes stop outbound traffic on TCP ports 25 and 80 to 10.0.20.0/26 from the 10.0.10.0/26 subnet while still allowing all other traffic? (Choose two.)

- A. Add a "permit ip any any" statement at the end of ACL 101 for allowed traffic.
- B. Add a "permit ip any any" statement to the beginning of ACL 101 for allowed traffic.
- C. The ACL must be moved to the Gi0/1 interface outbound on R2.
- D. The source and destination IPs must be swapped in ACL 101.
- E. The ACL must be configured the Gi0/2 interface inbound on R1.

Correct Answer: AD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 55

An engineer must configure a WLAN using the strongest encryption type for WPA2-PSK. Which cipher fulfills the configuration requirement?

- A. WEP
- B. AES
- C. RC4
- D. TKIP

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Many routers provide WPA2-PSK (TKIP), WPA2-PSK (AES), and WPA2-PSK (TKIP/AES) as options. TKIP is actually an older encryption protocol introduced with WPA to replace the very-insecure WEP encryption at the time. TKIP is actually quite similar to WEP encryption. TKIP is no longer considered secure, and is now deprecated. In other words, you shouldn't be using it.

AES is a more secure encryption protocol introduced with WPA2 and it is currently the strongest encryption type for WPA2- PSK/.

QUESTION 56

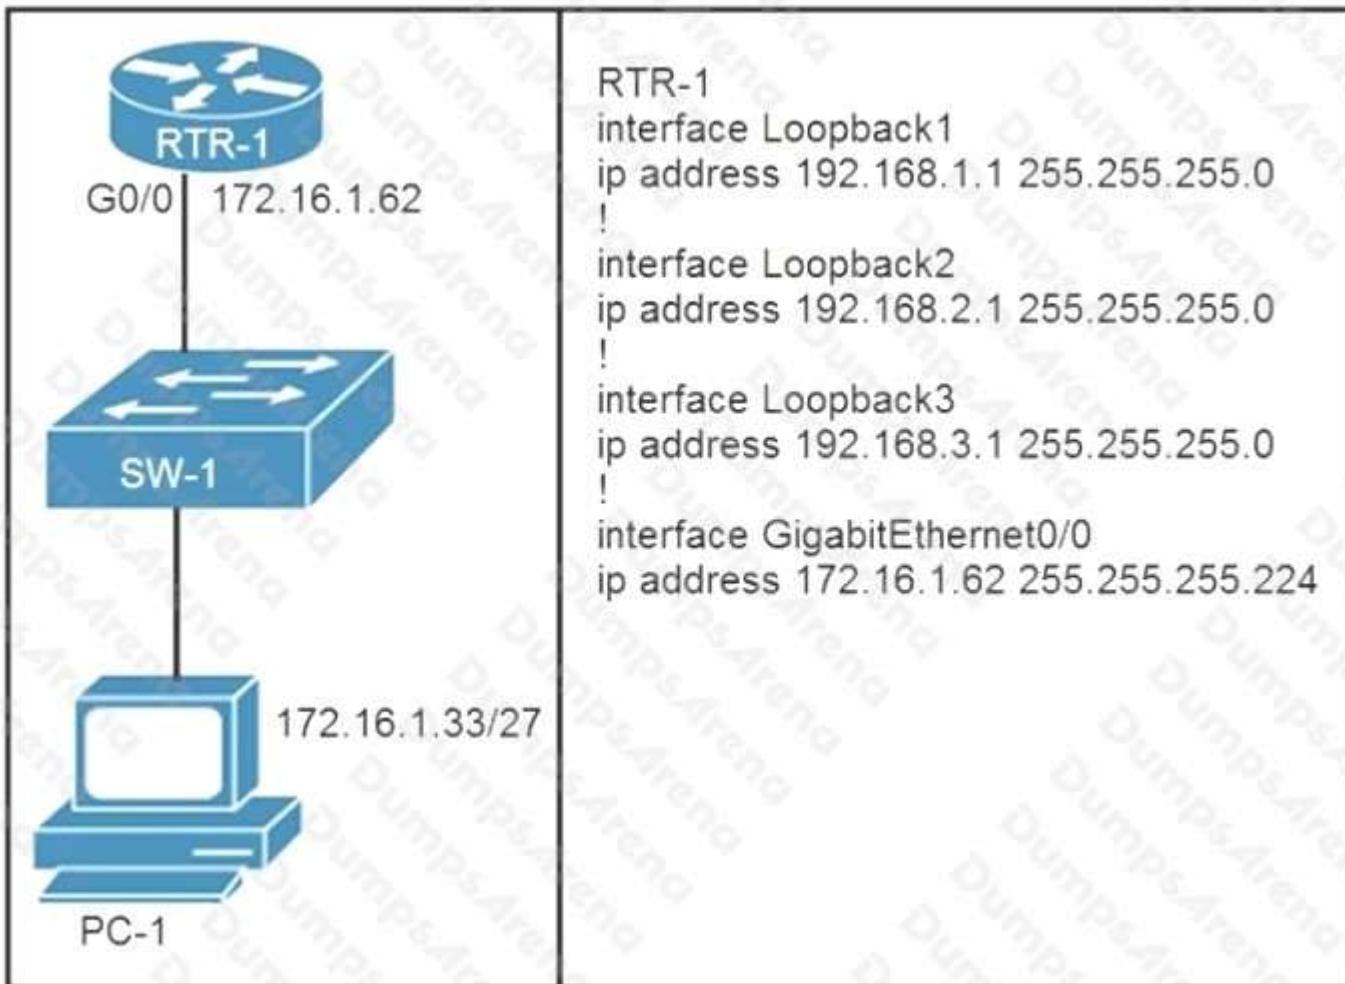

DRAG DROP

Drag and drop the attack-mitigation techniques from the left onto the types of attack that they mitigate on the right.

Select and Place:

Answer Area**configure 802.1x authenticate****configure DHCP snooping****configure the native VLAN with a nondefault VLAN ID****disable DTP****802.1q double-tagging VLAN-hopping attack****MAC flooding attack****man-in-the-middle spoofing attack****switch-spoofing VLAN-hopping attack****Answer:****A.****Answer Area****configure 802.1x authenticate****configure DHCP snooping****configure the native VLAN with a nondefault VLAN ID****disable DTP****configure the native VLAN with a nondefault VLAN ID****configure DHCP snooping****configure 802.1x authenticate****disable DTP****Correct Answer: A****Section: (none)****Explanation****Explanation/Reference:****QUESTION 57**

Refer to the exhibit. What configuration for RTR-1 denies SSH access from PC-1 to any RTR-1 interface and allows all other traffic?

- A. **access-list 100 deny tcp host 172.16.1.33 any eq 22**
access-list 100 permit ip any any

```
interface GigabitEthernet0/0
ip access-group 100 in
```

- B. **access-list 100 deny tcp host 172.16.1.33 any eq 22**
access-list 100 permit ip any any

```
line vty 0 15
access-class 100 in
```

- C. **access-list 100 deny tcp host 172.16.1.33 any eq 23**
access-list 100 permit ip any any

```
interface GigabitEthernet0/0
ip access-group 100 in
```

- D. **access-list 100 deny tcp host 172.16.1.33 any eq 23**
access-list 100 permit ip any any

```
line vty 0 15
access-class 100 in
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 58

While examining excessive traffic on the network, it is noted that all incoming packets on an interface appear to be allowed even though an IPv4 ACL is applied to the interface. Which two misconfigurations cause this behavior? (Choose two.)

- A. The ACL is empty
- B. A matching permit statement is too broadly defined
- C. The packets fail to match any permit statement

- D. A matching deny statement is too high in the access list
- E. A matching permit statement is too high in the access list

Correct Answer: BE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 59

The service password-encryption command is entered on a router. What is the effect of this configuration?

- A. restricts unauthorized users from viewing clear-text passwords in the running configuration
- B. prevents network administrators from configuring clear-text passwords
- C. protects the VLAN database from unauthorized PC connections on the switch
- D. encrypts the password exchange when a VPN tunnel is established

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 60

Which WPA3 enhancement protects against hackers viewing traffic on the Wi-Fi network?

- A. SAE encryption
- B. TKIP encryption
- C. scrambled encryption key
- D. AES encryption

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 61

Refer to the exhibit. If the network environment is operating normally, which type of device must be connected to interface fastethernet 0/1?

```
ip arp inspection vlan 2-10
interface fastethernet 0/1
  ip arp inspection trust
```

- A. DHCP client
- B. access point
- C. router
- D. PC

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 62

Refer to the exhibit. An administrator configures four switches for local authentication using passwords that are stored as a cryptographic hash. The four switches must also support SSH access for administrators to manage the network infrastructure. Which switch is configured correctly to meet these requirements?

```
SW1(config-line) #line vty 0 15
SW1(config-line) #no login local
SW1(config-line) #password cisco
```

```
SW2(config) #username admin1 password abcd1234
SW2(config) #username admin2 password abcd1234
SW2(config-line) #line vty 0 15
SW2(config-line) #login local
```

```
SW3(config) #username admin1 secret abcd1234
SW3(config) #username admin2 secret abcd1234
SW3(config-line) #line vty 0 15
SW3(config-line) #login local
```

```
SW4(config) #username admin1 secret abcd1234
SW4(config) #username admin2 secret abcd1234
SW4(config-line) #line console 0
SW4(config-line) #login local
```

- A. SW1
- B. SW2
- C. SW3
- D. SW4

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 63

```
ip arp inspection vlan 5-10
interface fastethernet 0/1
  switchport mode access
  switchport access vlan 5
```

Refer to the exhibit. What is the effect of this configuration?

- A. The switch discards all ingress ARP traffic with invalid MAC-to-IP address bindings.
- B. All ARP packets are dropped by the switch.
- C. Egress traffic is passed only if the destination is a DHCP server.
- D. All ingress and egress traffic is dropped because the interface is untrusted.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Dynamic ARP inspection is an ingress security feature; it does not perform any egress checking.

QUESTION 64

When a site-to-site VPN is used, which protocol is responsible for the transport of user data?

- A. IPsec
- B. IKEv1
- C. MD5
- D. IKEv2

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

A site-to-site VPN allows offices in multiple fixed locations to establish secure connections with each other over a public network such as the Internet. A site-to-site VPN means that two sites create a VPN tunnel by encrypting and sending data between two devices. One set of rules for creating a site-to-site VPN is defined by IPsec.

QUESTION 65

Which type of wireless encryption is used for WPA2 in preshared key mode?

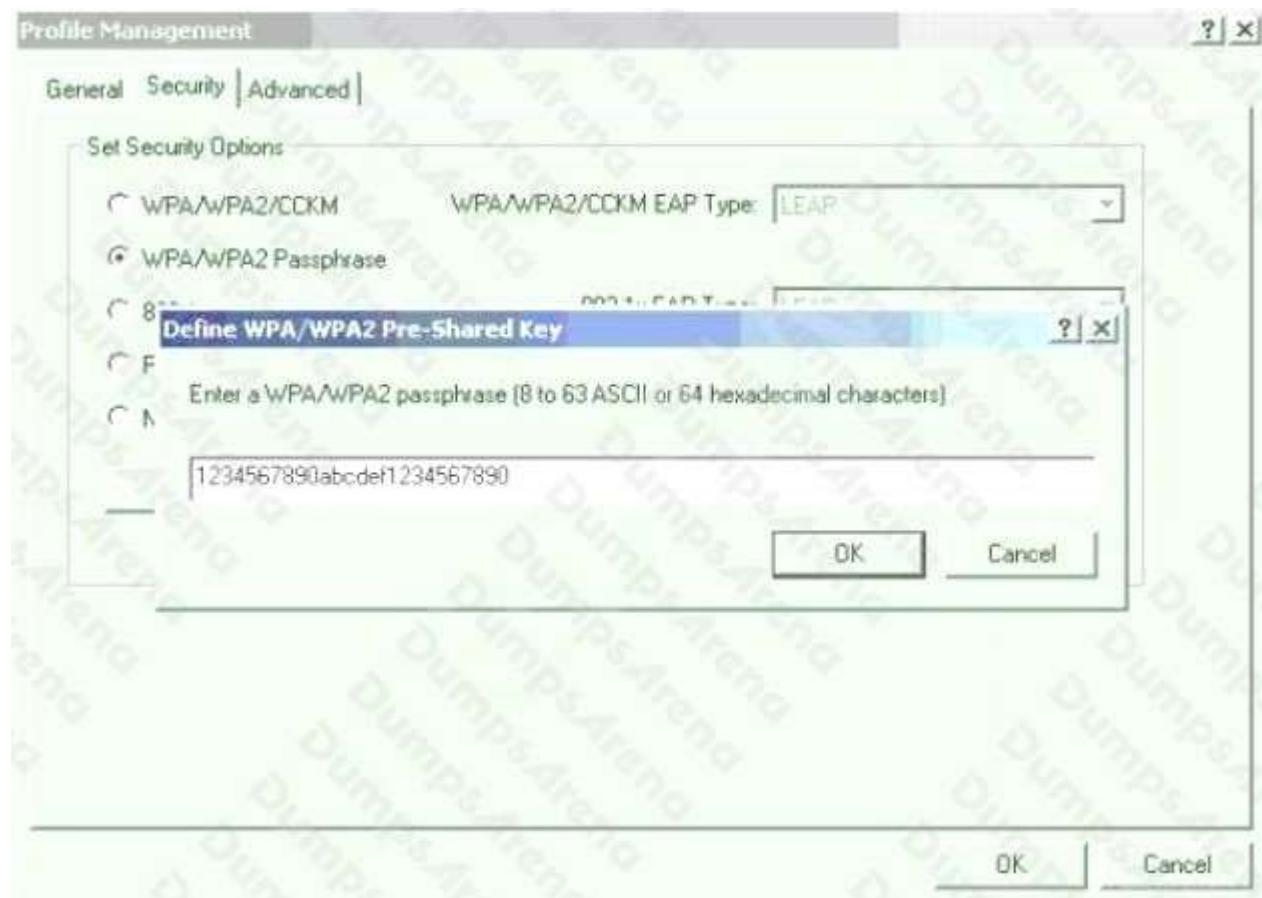

- A. AES-128
- B. TKIP with RC4
- C. AES-256
- D. RC4

Correct Answer: C

Section: (none)
Explanation

Explanation/Reference:
Explanation:

We can see in this picture we have to type 64 hexadecimal characters (256 bit) for the WPA2 passphrase so we can deduce the encryption is AES-256, not AES-128.

Reference: <https://www.cisco.com/c/en/us/support/docs/wireless-mobility/wireless-lan-wlan/67134-wpa2-config.html>

QUESTION 66
DRAG DROP

Drag and drop the threat-mitigation techniques from the left onto the types of threat or attack they mitigate on the right.

Select and Place:

Answer Area

Configure BPDU guard.	802.1q double tagging
Configure dynamic ARP inspection.	ARP spoofing
Configure root guard.	unwanted superior BPDUs
Configure VACL.	unwanted BPDUs on PortFast-enabled interfaces

Answer:

A.

Answer Area

Configure BPDU guard.	Configure VACL.
Configure dynamic ARP inspection.	Configure dynamic ARP inspection.
Configure root guard.	Configure root guard.
Configure VACL.	Configure BPDU guard.

Correct Answer: A

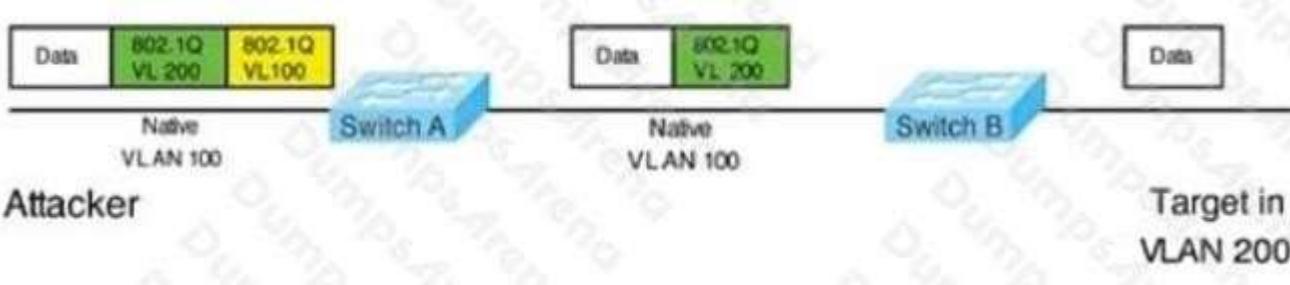

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Double-Tagging attack:

In this attack, the attacking computer generates frames with two 802.1Q tags. The first tag matches the native VLAN of the trunk port (VLAN 10 in this case), and the second matches the VLAN of a host it wants to attack (VLAN 20).

When the packet from the attacker reaches Switch A, Switch A only sees the first VLAN 10 and it matches with its native VLAN 10 so this VLAN tag is removed. Switch A forwards the frame out all links with the same native VLAN 10. Switch B receives the frame with a tag of VLAN 20 so it removes this tag and forwards out to the Victim computer.

Note: This attack only works if the trunk (between two switches) has the same native VLAN as the attacker.

To mitigate this type of attack, you can use VLAN access control lists (VACLs, which applies to all traffic within a VLAN. We can use VACL to drop attacker traffic to specific victims/servers) or implement Private VLANs.

ARP attack (like ARP poisoning/spoofing) is a type of attack in which a malicious actor sends falsified ARP messages over a local area network as ARP allows a gratuitous reply from a host even if an ARP request was not received. This results in the linking of an attacker's MAC address with the IP address of a legitimate computer or server on the network. This is an attack based on ARP which is at Layer 2. Dynamic ARP inspection (DAI) is a security feature that validates ARP packets in a network which can be used to mitigate this type of attack.

QUESTION 67

Which command prevents passwords from being stored in the configuration as plain text on a router or switch?

- A. enable secret
- B. enable password
- C. service password-encryption
- D. username cisco password encrypt

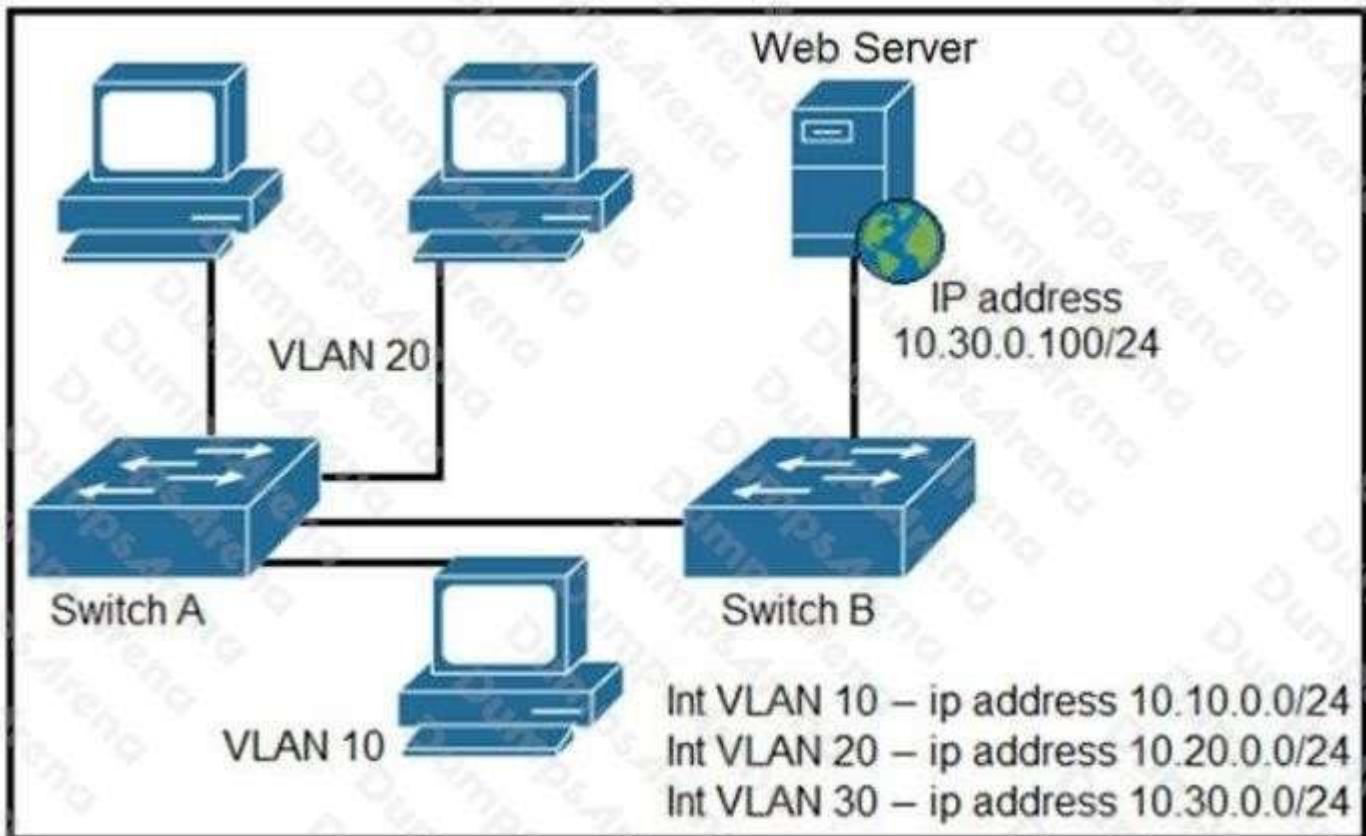

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 68

Refer to the exhibit. A network engineer must block access for all computers on VLAN 20 to the web server via HTTP. All other computers must be able to access the web server. Which configuration when applied to switch A accomplishes the task?

- A. config t
ip access-list extended wwwblock
permit ip any any
deny tcp any host 10.30.0.100 eq 80
int vlan 20
ip access-group wwwblock in
- B. config t
ip access-list extended wwwblock
permit ip any any
deny tcp any host 10.30.0.100 eq 80
int vlan 30
ip access-group wwwblock in
-
- C. config t
ip access-list extended wwwblock
deny tcp any host 10.30.0.100 eq 80
int vlan 10
ip access-group wwwblock in
- D. config t
ip access-list extended wwwblock
deny tcp any host 10.30.0.100 eq 80
permit ip any any
int vlan 20
ip access-group wwwblock in

- A. Option A
B. Option B

- C. Option C
- D. Option D

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 69

In which two ways does a password manager reduce the chance of a hacker stealing a user's password?
(Choose two.)

- A. It encourages users to create stronger passwords
- B. It uses an internal firewall to protect the password repository from unauthorized access
- C. It stores the password repository on the local workstation with built-in antivirus and anti-malware functionality
- D. It automatically provides a second authentication factor that is unknown to the original user
- E. It protects against keystroke logging on a compromised device or web site

Correct Answer: AE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 70

Which goal is achieved by the implementation of private IPv4 addressing on a network?

- A. provides an added level of protection against Internet exposure
- B. provides a reduction in size of the forwarding table on network routers
- C. allows communication across the Internet to other private networks
- D. allows servers and workstations to communicate across public network boundaries

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 71

Which type of attack is mitigated by dynamic ARP inspection?

- A. DDoS
- B. malware
- C. man-in-the-middle
- D. worm

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 72

What is a function of a remote access VPN?

- A. establishes a secure tunnel between two branch sites
- B. uses cryptographic tunneling to protect the privacy of data for multiple users simultaneously
- C. used exclusively when a user is connected to a company's internal network
- D. allows the users to access company internal network resources through a secure tunnel

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 73

What are two recommendations for protecting network ports from being exploited when located in an office space outside of an IT closet? (Choose two.)

- A. enable the PortFast feature on ports
- B. configure static ARP entries
- C. configure ports to a fixed speed
- D. implement port-based authentication
- E. shut down unused ports

Correct Answer: DE

Section: (none)

Explanation

Explanation/Reference:

QUESTION 74

```
interface GigabitEthernet0/1
ip address 192.168.1.2 255.255.255.0
ip access-group 2699 in
!
access-list 2699 deny icmp any 10.10.1.0 0.0.0.255 echo
access-list 2699 deny ip any 10.20.1.0 0.0.0.255
access-list 2699 permit ip any 10.10.1.0 0.0.0.255
access-list 2699 permit tcp any 10.20.1.0 0.0.0.127 eq 22
```

Refer to the exhibit. A network administrator must permit SSH access to remotely manage routers in a network. The operations team resides on the 10.20.1.0/25 network. Which command will accomplish this task?

- A. access-list 2699 permit udp 10.20.1.0 0.0.0.255

- B. no access-list 2699 deny tcp any 10.20.1.0 0.0.0.127 eq 22
- C. access-list 2699 permit tcp any 10.20.1.0 0.0.0.255 eq 22
- D. no access-list 2699 deny ip any 10.20.1.0 0.0.0.255

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Already a statement is there in last to allow SSH Traffic for network 10.20.1.0 0.0.0.127, but Second statement says deny ip any 10.20.1.0 0.0.0.255, so how it will work once it is denied. So the right answer is remove the --- no access-list 2699 deny ip any 10.20.1.0 0.0.0.255.

QUESTION 75

A port security violation has occurred on a switch port due to the maximum MAC address count being exceeded. Which command must be configured to increment the security-violation count and forward an SNMP trap?

- A. switchport port-security violation access
- B. switchport port-security violation protect
- C. switchport port-security violation restrict
- D. switchport port-security violation shutdown

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

https://www.cisco.com/c/en/us/td/docs/switches/lan/catalyst4500/12-2/25ew/configuration/guide/conf/port_sec.html

QUESTION 76

What is a practice that protects a network from VLAN hopping attacks?

- A. Enable dynamic ARP inspection
- B. Configure an ACL to prevent traffic from changing VLANs
- C. Change native VLAN to an unused VLAN ID
- D. Implement port security on internet-facing VLANs

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

QUESTION 77

Where does a switch maintain DHCP snooping information?

- A. In the CAM table
- B. In the frame forwarding database
- C. In the MAC address table
- D. In the binding database

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 78

A network administrator must configure SSH for remote access to router R1. The requirement is to use a public and private key pair to encrypt management traffic to and from the connecting client. Which configuration, when applied, meets the requirements?

- A. R1#enable
R1#configure terminal
R1(config)#ip domain-name cisco.com
R1(config)#crypto key generate ec keysize 1024
- B. R1#enable
R1#configure terminal
R1(config)#ip domain-name cisco.com
R1(config)#crypto key generate ec keysize 2048
- C. R1#enable
R1#configure terminal
R1(config)#ip domain-name cisco.com
R1(config)#crypto key encrypt rsa name myKey
- D. R1#enable
R1#configure terminal
R1(config)#ip domain-name cisco.com
R1(config)#crypto key generate rsa modulus 1024

Correct Answer: D

Section: (none)

QUESTION 93

Which service is missing when RADIUS is selected to provide management access to the WLC?

- A. authorization
- B. authentication
- C. accounting
- D. confidentiality

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 94

Which action implements physical access control as part of the security program of an organization?

- A. setting up IP cameras to monitor key infrastructure
- B. configuring a password for the console port
- C. backing up syslogs at a remote location
- D. configuring enable passwords on network devices

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 95

Which field within the access-request packet is encrypted by RADIUS?

- A. authorized services
- B. password
- C. authenticator
- D. username

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

<https://www.cisco.com/c/en/us/support/docs/security-vpn/remote-authentication-dial-user-service-radius/12433-32.html>

QUESTION 96

A Cisco engineer is configuring a factory-default router with these three passwords:

The user EXEC password for console access is p4ssw0rd1.

The user EXEC password for Telnet access is s3cr3t2.

The password for privileged EXEC mode is priv4t3p4ss.

Which command sequence must the engineer configure?

- A. enable secret priv4t3p4ss
 - !
 - line con 0 password p4ssw0rd1
 - !
 - line vty 0 15 password s3cr3t2
- B. enable secret priv4t3p4ss
 - !
 - line con 0 password p4ssw0rd1
 - login
 - !
 - line vty 0 15 password s3cr3t2 login
- C. enable secret priv4t3p4ss
 - !
 - line con 0
 - password login p4ssw0rd1
 - !
 - line vty 0 15 password login s3cr3t2
- D. enable secret privilege 15 priv4t3p4ss
 - !
 - line con 0 password p4ssw0rd1
 - login
 - !
 - line vty 0 15 password s3cr3t2 login

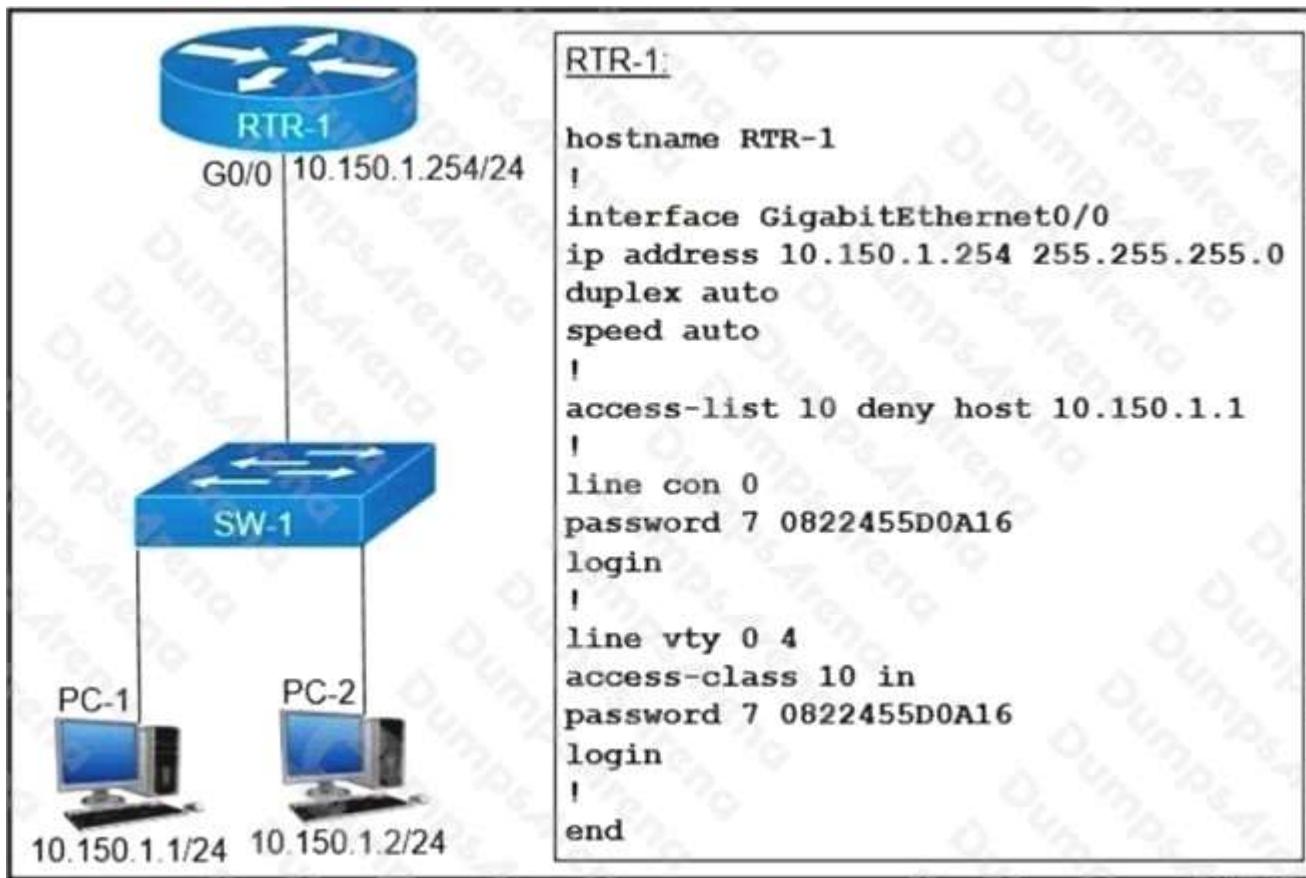

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 97

Refer to the exhibit. An access list is created to deny Telnet access from host PC-1 to RTR-1 and allow access from all other hosts. A Telnet attempt from PC-2 gives this message: "% Connection refused by remote host." Without allowing Telnet access from PC-1, which action must be taken to permit the traffic?

- A. Add the access-list 10 permit any command to the configuration.
- B. Remove the access-class 10 in command from line vty 0 4
- C. Add the ip access-group 10 out command to interface g0/0.
- D. Remove the password command from line vty 0 4.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 98

DRAG DROP

An engineer is tasked to configure a switch with port security to ensure devices that forward unicasts, multicasts, and broadcasts are unable to flood the port. The port must be configured to permit only two random MAC addresses at a time. Drag and drop the required configuration commands from the left onto the sequence on the right. Not all commands are used.

Select and Place:

Answer Area

switchport mode access	1
switchport port-security	2
switchport port-security mac-address 0060.3EDD.77AB	3
switchport port-security mac-address 00D0.D3ED.622A	4
switchport port-security mac-address sticky	
switchport port-security maximum 2	
switchport port-security violation shutdown	

Answer:

A.

Answer Area

switchport mode access	switchport mode access
switchport port-security	switchport port-security
switchport port-security mac-address 0060.3EDD.77AB	switchport port-security maximum 2
switchport port-security mac-address 00D0.D3ED.622A	switchport port-security violation shutdown
switchport port-security mac-address sticky	
switchport port-security maximum 2	
switchport port-security violation shutdown	

Correct Answer: A**Section: (none)****Explanation****Explanation/Reference:**

https://www.cisco.com/en/US/docs/switches/lan/catalyst3850/software/release/3se/consolidated_guide/b_consolidated_3850_3se_cg_chapter_01000000.html

QUESTION 99

What is a function of Opportunistic Wireless Encryption in an environment?

- A. provide authentication
- B. protect traffic on open networks
- C. offer compression
- D. increase security by using a WEP connection

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

https://www.cisco.com/c/en/us/td/docs/wireless/controller/9800/16-12/config-guide/b_wl_16_12_cg/wpa3.html

QUESTION 100

DRAG DROP

Drag and drop the AAA features from the left onto the corresponding AAA security services on the right. Not all options are used.

Select and Place:

Answer Area

- It enables the device to allow user- or group-based access.
- It leverages a RADIUS server to grant user access to a reverse Telnet session.
- It records the amount of time for which a user accesses the network on a remote server.
- It restricts the CLI commands that a user can perform.
- It uses TACACS+ to log the configuration commands entered by a network administrator.
- It verifies the user and password before granting access to the device.

Accounting

Authorization

Answer:

A.

Answer Area

- It enables the device to allow user- or group-based access.
- It leverages a RADIUS server to grant user access to a reverse Telnet session.
- It records the amount of time for which a user accesses the network on a remote server.
- It restricts the CLI commands that a user can perform.
- It uses TACACS+ to log the configuration commands entered by a network administrator.
- It verifies the user and password before granting access to the device.

Accounting

- It records the amount of time for which a user accesses the network on a remote server.
- It uses TACACS+ to log the configuration commands entered by a network administrator.

Authorization

- It enables the device to allow user- or group-based access.
- It restricts the CLI commands that a user can perform.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 101

Layer 2 Layer 3 AAA Servers

Layer 2 Security: WPA+WPA2 MAC Filtering:

Fast Transition

Fast Transition: Adaptive Over the DS: Reassociation Timeout: 20 Seconds

Protected Management Frame

PMF: Disabled

WPA+WPA2 Parameters

WPA Policy:
WPA2 Policy:
WPA2 Encryption: AES TKIP CCMP256 GCMP128 GCMP256
OSEN Policy:

Authentication Key Management

802.1X: Enable
CCKM: Enable
PSK: Enable
FT 802.1X: Enable
FT PSK: Enable
SUITEB-1X: Enable
SUITEB192-1X: Enable
WPA gtk-randomize State: Disable

Refer to the exhibit. Clients on the WLAN are required to use 802.11r. What action must be taken to meet the requirement?

- A. Under Protected Management Frames, set the PMF option to Required.
- B. Enable CCKM under Authentication Key Management.
- C. Set the Fast Transition option and the WPA gtk-randomize State to disable.
- D. Set the Fast Transition option to Enable and enable FT 802.1X under Authentication Key Management.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 102

General	Security	QoS	Policy-Mapping	Advanced											
Layer 2	Layer 3	AAA Servers													
<p>Layer 2 Security: <input type="text" value="WPA+WPA2"/></p> <p>Security Type: <input type="text" value="Enterprise"/></p> <p>MAC Filtering: <input type="checkbox"/></p> <p>WPA+WPA2 Parameters</p> <table> <tr> <td>WPA Policy: <input type="checkbox"/></td> <td>WPA2 Policy: <input checked="" type="checkbox"/></td> </tr> <tr> <td>WPA2 Encryption: <input checked="" type="checkbox"/> CCMP128(AES)</td> <td>TKIP: <input type="checkbox"/></td> </tr> <tr> <td>CCMP256: <input type="checkbox"/></td> <td>GCMP128: <input type="checkbox"/></td> </tr> <tr> <td>GCMP256: <input type="checkbox"/></td> <td></td> </tr> </table> <p>Fast Transition</p> <table> <tr> <td>Fast Transition: <input type="checkbox"/> Disable</td> </tr> </table> <p>Protected Management Frame</p> <table> <tr> <td>PMF: <input type="checkbox"/> Disabled</td> </tr> </table> <p>Authentication Key Management <input type="checkbox"/></p> <table> <tr> <td>802.1X-SHA1: <input checked="" type="checkbox"/> Enable</td> </tr> </table>					WPA Policy: <input type="checkbox"/>	WPA2 Policy: <input checked="" type="checkbox"/>	WPA2 Encryption: <input checked="" type="checkbox"/> CCMP128(AES)	TKIP: <input type="checkbox"/>	CCMP256: <input type="checkbox"/>	GCMP128: <input type="checkbox"/>	GCMP256: <input type="checkbox"/>		Fast Transition: <input type="checkbox"/> Disable	PMF: <input type="checkbox"/> Disabled	802.1X-SHA1: <input checked="" type="checkbox"/> Enable

CCMP256: <input type="checkbox"/>	GCMP128: <input type="checkbox"/>														
GCMP256: <input type="checkbox"/>															
Fast Transition: <input type="checkbox"/> Disable															
PMF: <input type="checkbox"/> Disabled															
802.1X-SHA1: <input checked="" type="checkbox"/> Enable															

Refer to the exhibit. What must be configured to enable 802.11w on the WLAN?

- A. Set Fast Transition to Enabled.
- B. Enable WPA Policy.
- C. Set PMF to Required.
- D. Enable MAC Filtering.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

https://www.cisco.com/c/en/us/td/docs/wireless/controller/5700/software/release/3se/wlan/configuration_guide/b_wlan_3se_5700_cg/b_wlan_3se_5700_cg_chapter_01000.pdf

QUESTION 103

An organization has decided to start using cloud-provided services. Which cloud service allows the organization to install its own operating system on a virtual machine?

- A. platform-as-a-service
- B. network-as-a-service
- C. software-as-a-service
- D. infrastructure-as-a-service

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Below are the 3 cloud supporting services cloud providers provide to customer:

SaaS (Software as a Service): SaaS uses the web to deliver applications that are managed by a third-party vendor and

whose interface is accessed on the clients' side. Most SaaS applications can be run directly from a web browser without any downloads or installations required, although some require plugins.

PaaS (Platform as a Service): are used for applications, and other development, while providing cloud components to

software. What developers gain with PaaS is a framework they can build upon to develop or customize applications. PaaS makes the development, testing, and deployment of applications quick, simple, and cost-effective. With this technology, enterprise operations, or a third-party provider, can manage OSes, virtualization, servers, networking, and the PaaS software itself. Developers, however, manage the applications.

IaaS (Infrastructure as a Service): self-service models for accessing, monitoring, and managing remote datacenter

infrastructures, such as compute (virtualized or bare metal), storage, networking, and networking services (e.g. firewalls). Instead of having to purchase hardware outright, users can purchase IaaS based on consumption, similar to electricity or other utility billing.

In general, IaaS provides hardware so that an organization can install their own operating system.

QUESTION 104

How do traditional campus device management and Cisco DNA Center device management differ in regards to deployment?

- A. Traditional campus device management allows a network to scale more quickly than with Cisco DNA Center device management.
- B. Cisco DNA Center device management can deploy a network more quickly than traditional campus device management.
- C. Cisco DNA Center device management can be implemented at a lower cost than most traditional campus device management options.
- D. Traditional campus device management schemes can typically deploy patches and updates more quickly than Cisco DNA Center device management.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:**QUESTION 105**

Which purpose does a northbound API serve in a controller-based networking architecture?

- A. facilitates communication between the controller and the applications
- B. reports device errors to a controller

- C. generates statistics for network hardware and traffic
- D. communicates between the controller and the physical network hardware

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 106

What benefit does controller-based networking provide versus traditional networking?

- A. allows configuration and monitoring of the network from one centralized point
- B. provides an added layer of security to protect from DDoS attacks
- C. combines control and data plane functionality on a single device to minimize latency
- D. moves from a two-tier to a three-tier network architecture to provide maximum redundancy

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 107

What is an advantage of Cisco DNA Center versus traditional campus device management?

- A. It is designed primarily to provide network assurance.
- B. It supports numerous extensibility options, including cross-domain adapters and third-party SDKs.
- C. It supports high availability for management functions when operating in cluster mode.
- D. It enables easy autodiscovery of network elements in a brownfield deployment.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

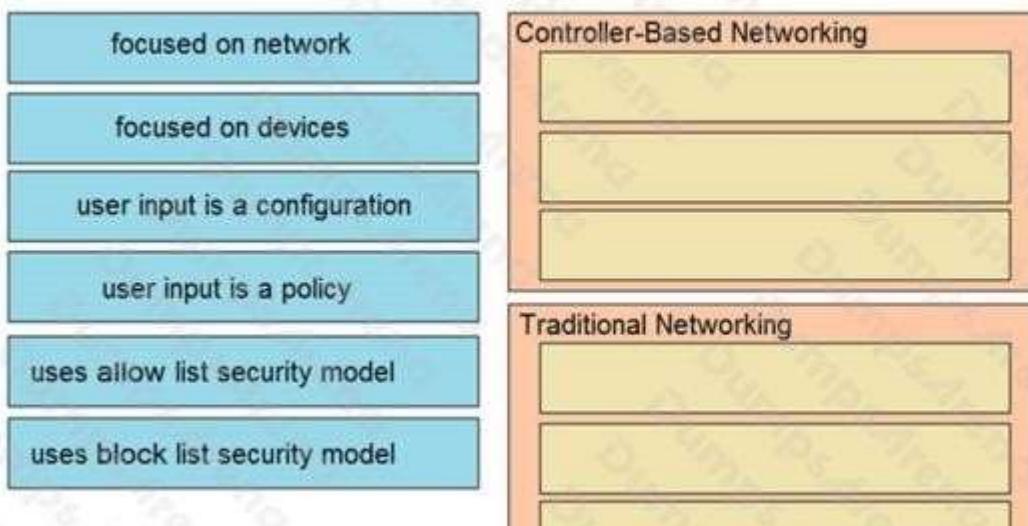

QUESTION 108

DRAG DROP

Drag and drop the characteristics of networking from the left onto the correct networking types on the right.

Select and Place:

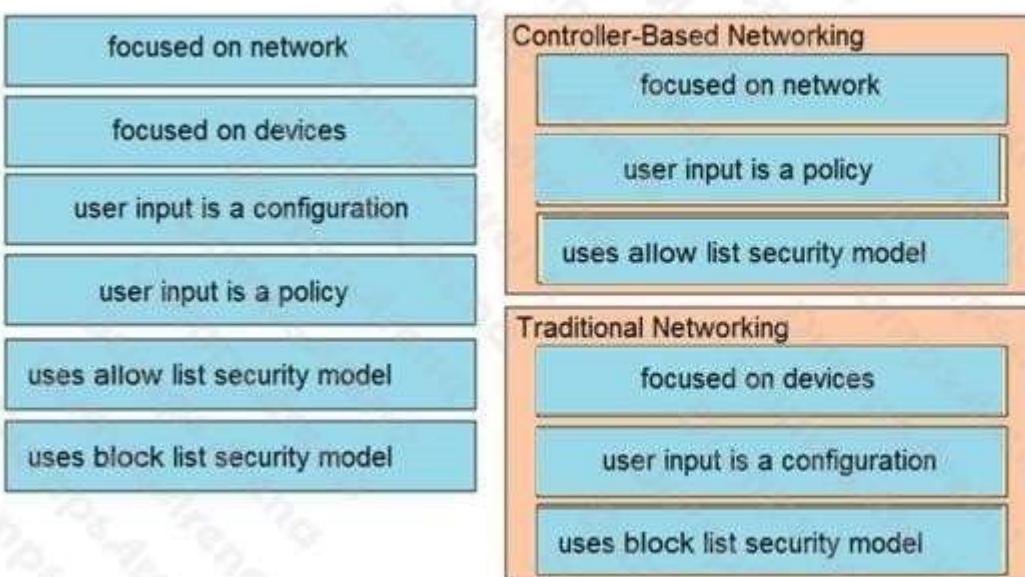

Answer Area

Answer:

A.

Answer Area

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 109

What are two fundamentals of virtualization? (Choose two.)

- A. It allows logical network devices to move traffic between virtual machines and the rest of the physical network.
- B. It allows multiple operating systems and applications to run independently on one physical server.
- C. It allows a physical router to directly connect NICs from each virtual machine into the network.
- D. It requires that some servers, virtual machines, and network gear reside on the Internet.
- E. The environment must be configured with one hypervisor that serves solely as a network manager to monitor SNMP traffic.

Correct Answer: AB

Section: (none)

Explanation

Explanation/Reference:

QUESTION 110

How does Cisco DNA Center gather data from the network?

- A. Devices use the call-home protocol to periodically send data to the controller
- B. Devices establish an IPsec tunnel to exchange data with the controller
- C. The Cisco CLI Analyzer tool gathers data from each licensed network device and streams it to the controller
- D. Network devices use different services like SNMP, syslog, and streaming telemetry to send data to the controller

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 111

Which statement correctly compares traditional networks and controller-based networks?

- A. Only controller-based networks decouple the control plane and the data plane.
- B. Traditional and controller-based networks abstract policies from device configurations.
- C. Only traditional networks natively support centralized management.
- D. Only traditional networks offer a centralized control plane.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Most traditional devices use a distributed architecture, in which each control plane is resided in a networking device. Therefore they need to communicate with each other via messages to work correctly. In contrast to distributed architecture, centralized (or controller-based) architectures centralizes the control of networking devices into one device, called SDN controller.

QUESTION 112

What are two benefits of network automation? (Choose two.)

- A. reduced hardware footprint
- B. reduced operational costs
- C. faster changes with more reliable results
- D. fewer network failures
- E. increased network security

Correct Answer: BC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 113

Which two encoding methods are supported by REST APIs? (Choose two.)

- A. SGML
- B. YAML
- C. XML
- D. JSON
- E. EBCDIC

Correct Answer: CD

Section: (none)

Explanation

Explanation/Reference:

Explanation:

The Application Policy Infrastructure Controller (APIC) REST API is a programmatic interface that uses REST architecture. The API accepts and returns HTTP (not enabled by default) or HTTPS messages that contain JavaScript Object Notation (JSON) or Extensible Markup Language (XML) documents.

Reference: https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/2-x/rest_cfg/2_1_x/b_Cisco_APIC_REST_API_Configuration_Guide/b_Cisco_APIC_REST_API_Configuration_Guide_chapter_01.html

QUESTION 114

What are two characteristics of a controller-based network? (Choose two.)

- A. It uses Telnet to report system issues.
- B. The administrator can make configuration updates from the CLI.
- C. It uses northbound and southbound APIs to communicate between architectural layers.
- D. It decentralizes the control plane, which allows each device to make its own forwarding decisions.
- E. It moves the control plane to a central point.

Correct Answer: CE

Section: (none)

Explanation

Explanation/Reference:

Explanation:

```
{  
  "response": {  
    "taskId": {},  
    "url": "string"  
  },  
  "version": "string"  
}  
  
{  
  "response"- {  
    "taskId"- {},  
    "url"- "string"  
  },  
  "version"- "string"  
}
```

QUESTION 115

Which output displays a JSON data representation?

A. {
 "response": {
 "taskId": {},
 "url": "string"
 },
 "version": "string"
}

B. {
 "response": {
 "taskId": {},
 "url": "string"
 },
 "version": "string"
}

C. {
 "response": {
 "taskId": {},
 "url": "string"
 },
 "version": "string"
}

D. {
 "response": {
 "taskId": {},
 "url": "string"
 },
 "version": "string"
}

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

JSON data is written as name/value pairs.

A name/value pair consists of a field name (in double quotes), followed by a colon, followed by a value:
"name":"Mark"

JSON can use arrays. Array values must be of type string, number, object, array, boolean or null. For example:

```
{  
  "name": "John",  
  "age": 30,  
  "cars": [ "Ford", "BMW", "Fiat" ]  
}
```

JSON can have empty object like "taskId":{}

QUESTION 116

DRAG DROP

Drag and drop the descriptions from the left onto the configuration-management technologies on the right.

Select and Place:

Answer Area

fundamental configuration elements are stored in a manifest

uses TCP port 10002 for configuration push jobs

uses Ruby for fundamental configuration elements

uses SSH for remote device communication

uses TCP 8140 for communication

uses YAML for fundamental configuration elements

Ansible

Chef

Puppet

Answer:

A.

Answer Area

- fundamental configuration elements are stored in a manifest
- uses TCP port 10002 for configuration push jobs
- uses Ruby for fundamental configuration elements
- uses SSH for remote device communication
- uses TCP 8140 for communication
- uses YAML for fundamental configuration elements

Ansible

- uses SSH for remote device communication

- uses YAML for fundamental configuration elements

Chef

- uses TCP port 10002 for configuration push jobs

- uses Ruby for fundamental configuration elements

Puppet

- fundamental configuration elements are stored in a manifest

- uses TCP 8140 for communication

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

The focus of Ansible is to be streamlined and fast, and to require no node agent installation. Thus, Ansible performs all functions over SSH. Ansible is built on Python, in contrast to the Ruby foundation of Puppet and Chef.

TCP port 10002 is the command port. It may be configured in the Chef Push Jobs configuration file . This port allows Chef Push Jobs clients to communicate with the Chef Push Jobs server.

Puppet is an open-source configuration management solution, which is built with Ruby and offers custom Domain Specific Language (DSL) and Embedded Ruby (ERB) templates to create custom Puppet language files, offering a declarative- paradigm programming approach.

A Puppet piece of code is called a manifest, and is a file with .pp extension.

QUESTION 117

Which two capabilities of Cisco DNA Center make it more extensible as compared to traditional campus device management? (Choose two.)

- A. REST APIs that allow for external applications to interact natively
- B. adapters that support all families of Cisco IOS software
- C. SDKs that support interaction with third-party network equipment
- D. modular design that is upgradable as needed
- E. customized versions for small, medium, and large enterprises

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Cisco DNA Center offers 360-degree extensibility through four distinct types of platform capabilities:

Intent-based APIs leverage the controller and enable business and IT applications to deliver intent to the network and to

reap network analytics and insights for IT and business innovation.

Process adapters, built on integration APIs, allow integration with other IT and network systems to streamline IT

operations and processes.

Domain adapters, built on integration APIs, allow integration with other infrastructure domains such as data center, WAN,

and security to deliver a consistent intent-based infrastructure across the entire IT environment.

SDKs allow management to be extended to third-party vendor's network devices to offer support for diverse environments.

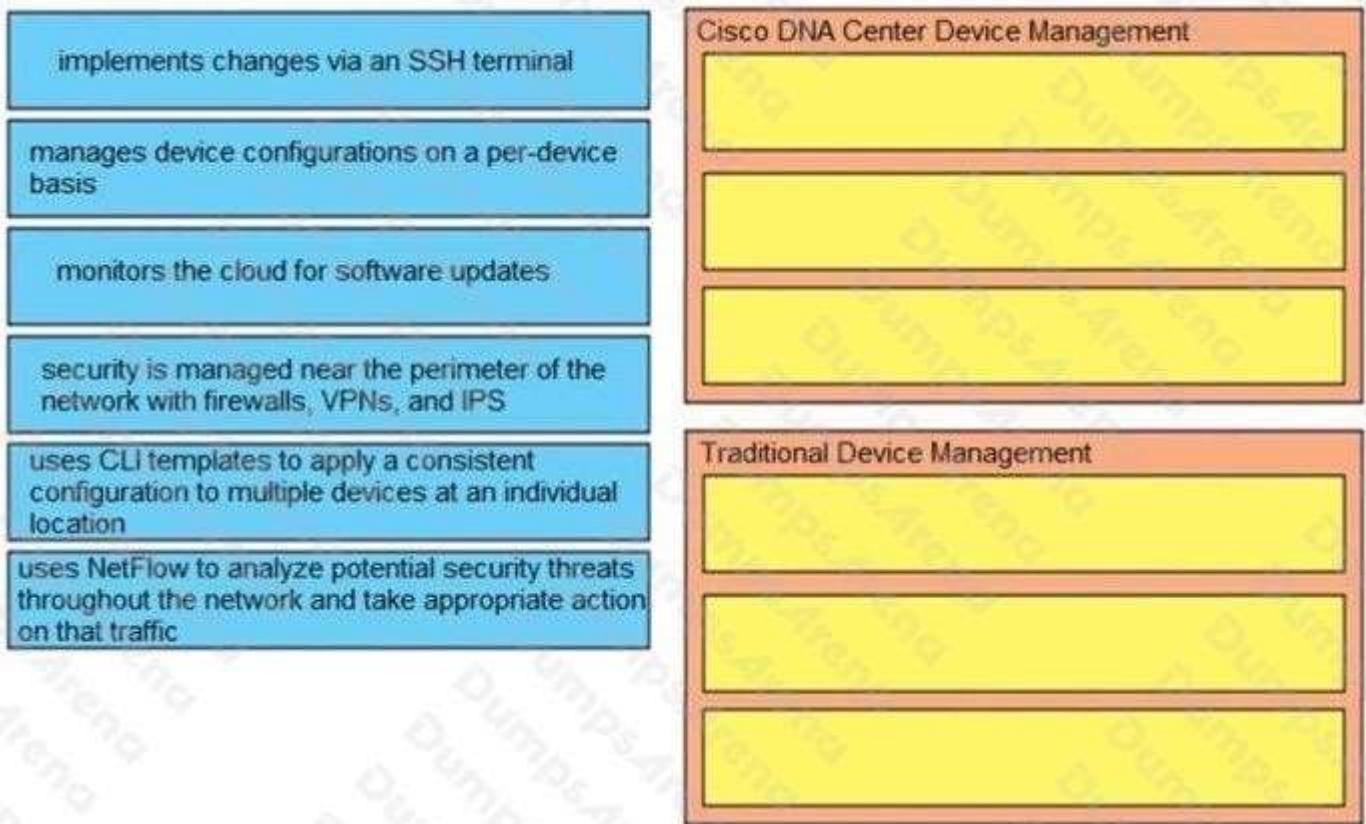

Reference: <https://www.cisco.com/c/en/us/products/collateral/cloud-systems-management/dna-center/nb-06-dna-cent-platf-aag-cte-en.html>

QUESTION 118

DRAG DROP

Drag the descriptions of device management from the left onto the types of device management on the right.

Select and Place:

Answer:

A.

implements changes via an SSH terminal	Cisco DNA Center Device Management
manages device configurations on a per-device basis	
monitors the cloud for software updates	Traditional Device Management
security is managed near the perimeter of the network with firewalls, VPNs, and IPS	
uses CLI templates to apply a consistent configuration to multiple devices at an individual location	Cisco DNA Center Device Management
uses NetFlow to analyze potential security threats throughout the network and take appropriate action on that traffic	
implements changes via an SSH terminal	Traditional Device Management
manages device configurations on a per-device basis	
security is managed near the perimeter of the network with firewalls, VPNs, and IPS	Cisco DNA Center Device Management

Correct Answer: A

Section: (none)

Explanation

QUESTION 119

What software-defined architecture plane assists network devices with making packet-forwarding decisions by providing Layer 2 reachability and Layer 3 routing information?

- A. management plane
- B. control plane
- C. data plane
- D. policy plane

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 120

What are two benefits of controller-based networking compared to traditional networking? (Choose two.)

- A. controller-based increases network bandwidth usage, while traditional lightens the load on the network
- B. controller-based reduces network configuration complexity, while traditional increases the potential for errors
- C. controller-based allows for fewer network failures, while traditional increases failure rates
- D. controller-based provides centralization of key IT functions, while traditional requires distributed management functions
- E. controller-based inflates software costs, while traditional decreases individual licensing costs

Correct Answer: BD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 121

Which type of API allows SDN controllers to dynamically make changes to the network?

- A. northbound API
- B. REST API
- C. SOAP API
- D. southbound API

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 122

DRAG DROP

Drag and drop the AAA terms from the left onto the descriptions on the right.

Select and Place:

accounting

authentication

authorization

CoA

tracks activity

updates session attributes

verifies access rights

verifies identity

Answer:

A.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 123

Which option about JSON is true

- A. uses predefined tags or angle brackets () to delimit markup text
- B. used to describe structured data that includes arrays
- C. used for storing information
- D. similar to HTML, it is more verbose than XML

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

JSON data is written as name/value pairs.

A name/value pair consists of a field name (in double quotes), followed by a colon, followed by a value:
"name":"Mark"

JSON can use arrays. Array values must be of type string, number, object, array, boolean or null..

For example:

```
{  
  "name": "John",  
  "age": 30,  
  
  "cars": [ "Ford", "BMW", "Fiat" ] }
```

QUESTION 124

Which option best describes an API?

- A. a contract that describes how various components communicate and exchange data with each other
- B. an architectural style (versus a protocol) for designing applications
- C. a stateless client-server model
- D. request a certain type of data by specifying the URL path that models the data

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 125

DRAG DROP

Drag and drop the characteristics of a cloud environment from the left onto the correct examples on the right.

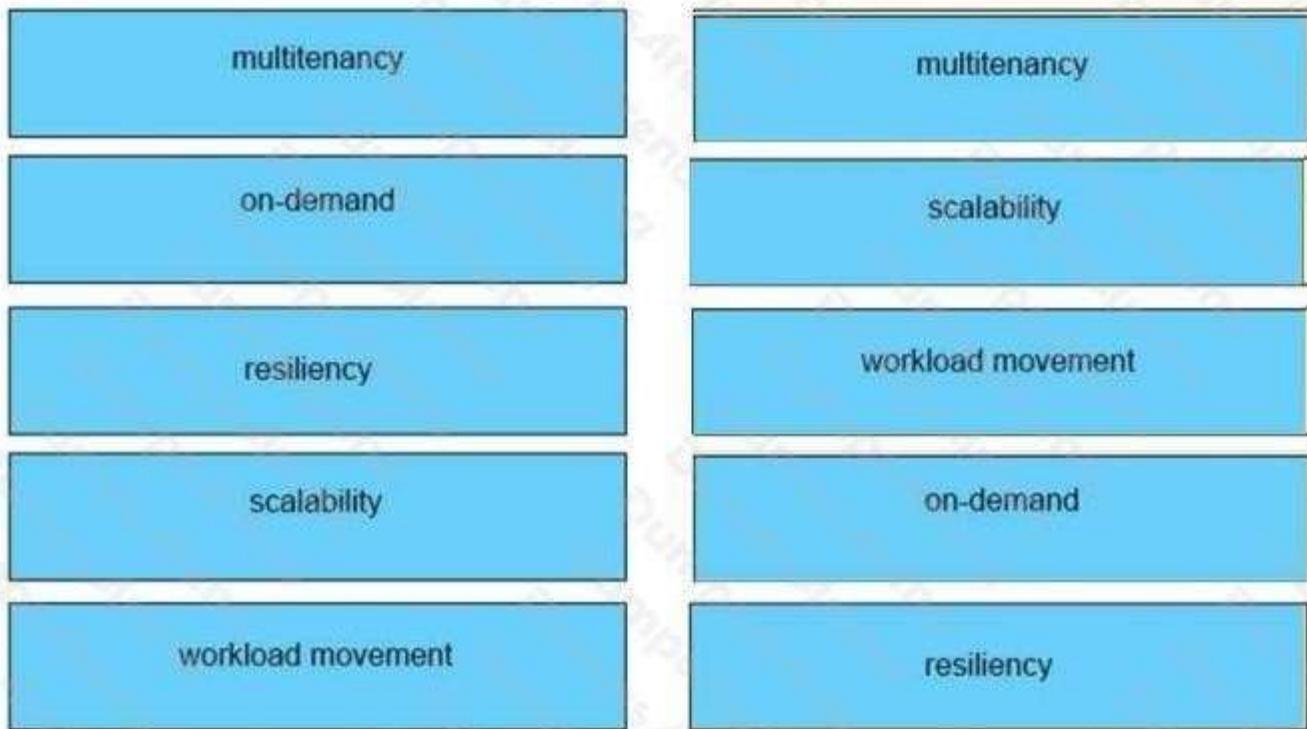

Select and Place:

multitenancy
on-demand
resiliency
scalability
workload movement

One or more clients can be hosted with the same physical or virtual infrastructure
Resources can be added and removed as needed to support current workload and tasks
Tasks can be migrated to different physical locations to increase efficiency or reduce cost.
Resources are dedicated only when necessary instead of on a permanent
Tasks and data residing on a failed server can be seamlessly migrated to other physical resources.

Answer:

A.

Correct Answer: A

Section: (none)

QUESTION 138

Where is the interface between the control plane and data plane within the software-defined architecture?

- A. application layer and the management layer
- B. application layer and the infrastructure layer
- C. control layer and the application layer
- D. control layer and the infrastructure layer

Correct Answer: D

Section: (none)

Explanation

QUESTION 139

Which statement compares traditional networks and controller-based networks?

- A. Only traditional networks natively support centralized management.
- B. Traditional and controller-based networks abstract policies from device configurations.
- C. Only traditional networks offer a centralized control plane.
- D. Only controller-based networks decouple the control plane and the data plane.

Correct Answer: D

QUESTION 140

Which two events occur automatically when a device is added to Cisco DNA Center? (Choose two.)

- A. The device is placed into the Managed state.
- B. The device is placed into the Unmanaged state.
- C. The device is assigned to the Local site.
- D. The device is assigned to the Global site.
- E. The device is placed into the Provisioned state.

Correct Answer: AD

QUESTION 141

Which two components are needed to create an Ansible script that configures a VLAN on a switch? (Choose two.)

- A. playbook
- B. recipe
- C. model
- D. cookbook
- E. task

Correct Answer: AE

QUESTION 142

In software-defined architecture, which plane handles switching for traffic through a Cisco router?

- A. control
- B. data
- C. management
- D. application

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 143

What are two southbound APIs? (Choose two.)

- A. Thrift
- B. DSC
- C. CORBA
- D. NETCONF
- E. OpenFlow

Correct Answer: DE

Section: (none)

Explanation

Explanation/Reference:

Explanation:

OpenFlow is a well-known southbound API. OpenFlow defines the way the SDN Controller should interact with the forwarding plane to make adjustments to the network, so it can better adapt to changing business requirements.

The Network Configuration Protocol (NetConf) uses Extensible Markup Language (XML) to install, manipulate and delete configuration to network devices.

Other southbound APIs are:

- onePK: a Cisco proprietary SBI to inspect or modify the network element configuration without hardware upgrades.
- OpFlex: an open-standard, distributed control system. It sends "summary policy" to network elements.

QUESTION 144

What makes Cisco DNA Center different from traditional network management applications and their management of networks?

- A. Its modular design allows someone to implement different versions to meet the specific needs of an organization.
- B. It only supports auto-discovery of network elements in a greenfield deployment.
- C. It does not support high availability of management functions when operating in cluster mode.
- D. It abstracts policy from the actual device configuration.

Correct Answer: D

Section: (none)

Explanation

QUESTION 146

DRAG DROP

Drag and drop the statements about networking from the left onto the corresponding networking types on the right.

Select and Place:

Answer Area

- This type allows better control over how networks work and how networks are configured.
- This type enables networks to integrate with applications through APIs.
- New devices are configured using the physical infrastructure.
- This type provisions resources from a centralized location.
- This type requires a distributed control plane.

Controller-Based Networking

-
-
-

Traditional Networking

-
-

Answer:

A.

Answer Area

- This type allows better control over how networks work and how networks are configured.
- This type enables networks to integrate with applications through APIs.
- New devices are configured using the physical infrastructure.
- This type provisions resources from a centralized location.
- This type requires a distributed control plane.

Controller-Based Networking

- This type allows better control over how networks work and how networks are configured.

- This type enables networks to integrate with applications through APIs.

- This type provisions resources from a centralized location.

Traditional Networking

- New devices are configured using the physical infrastructure.

- This type requires a distributed control plane.

Correct Answer: A

QUESTION 147

```
1 [
2   { "switch": "3750", "port": e2 },
3   { "router": "2951", "port": e20 },
4   { "switch": "3750", "port": e23 },
5 ]
```

Refer to the exhibit. What is represented beginning with line 1 and ending with line 5?

- A. object
- B. value
- C. key
- D. array

Correct Answer: D

Section: (none)

Explanation

QUESTION 149

What differentiates device management enabled by Cisco DNA Center from traditional campus device management?

- A. CLI-oriented device
- B. centralized
- C. device-by-device hands-on
- D. per-device

Correct Answer: B

Section: (none)

Explanation

QUESTION 150

DRAG DROP

Drag and drop the statements about networking from the left onto the corresponding networking types on the right.

Select and Place:

Answer Area

This type deploys a consistent configuration across multiple devices.

A distributed control plane is needed.

This type requires a distributed management plane.

Southbound APIs are used to apply configurations.

Northbound APIs interact with end devices.

Controller-Based Networking

Traditional Networking

Answer:

A.

Answer Area

This type deploys a consistent configuration across multiple devices.

A distributed control plane is needed.

This type requires a distributed management plane.

Southbound APIs are used to apply configurations.

Northbound APIs interact with end devices.

Controller-Based Networking

This type deploys a consistent configuration across multiple devices.

Southbound APIs are used to apply configurations.

Traditional Networking

A distributed control plane is needed.

This type requires a distributed management plane.

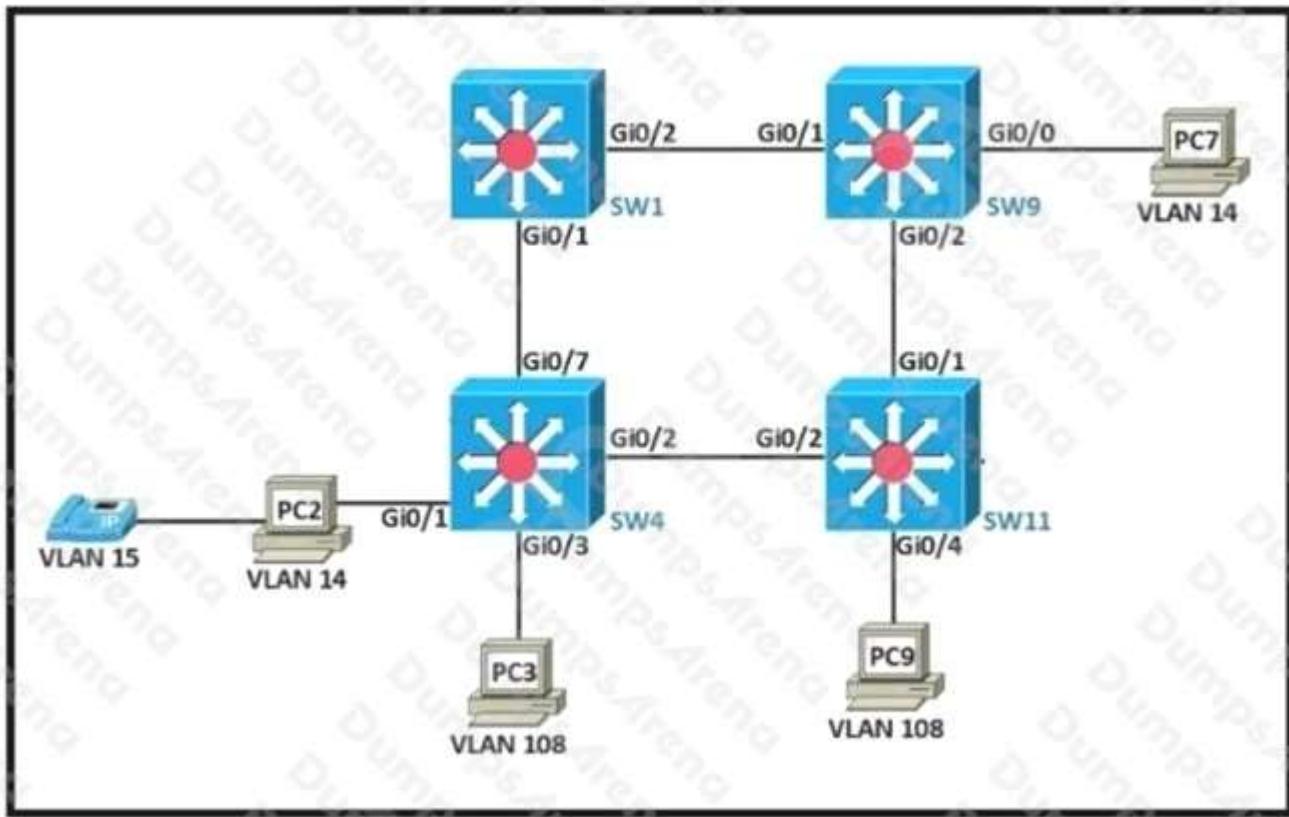

Correct Answer: A

QUESTION 151

Refer to the exhibit. The following must be considered:

SW1 is fully configured for all traffic.

■

The SW4 and SW9 links to SW1 have been configured.

■

The SW4 interface Gi0/1 and Gi0/0 on SW9 have been configured.

■

The remaining switches have had all VLANs added to their VLAN database.

■

Which configuration establishes a successful ping from PC2 to PC7 without interruption to traffic flow between other PCs?

A. SW4

interface Gi0/7 switchport mode trunk switchport trunk allowed vlan 108 !

interface Gi0/2 switchport mode access switchport access vlan 14

SW11#

interface Gi0/2 switchport mode trunk switchport trunk allowed vlan 14,108 !

interface Gi0/1 switchport mode trunk switchport trunk allowed vlan 14,108 SW9#

interface Gi0/2 switchport mode access switchport access vlan 14

B. SW4

interface Gi0/2 switchport mode trunk switchport trunk allowed vlan 14,108 SW11#

interface Gi0/2 switchport mode trunk switchport trunk allowed vlan 14,108 !!

interface Gi0/1 switchport mode trunk switchport trunk allowed vlan 14,108 SW9#
interface Gi0/2 switchport mode trunk switchport trunk allowed vlan 14

C. SW4

interface Gi0/2 switchport mode trunk switchport trunk allowed vlan 14 SW11#
interface Gi0/1 switchport mode trunk switchport trunk allowed vlan 14 SW9#
interface Gi0/2 switchport mode trunk switchport trunk allowed vlan 108

D. SW4

interface Gi0/2 switchport mode access switchport access vlan 14
SW11#
interface Gi0/2 switchport mode trunk switchport trunk allowed vlan 14 !
interface Gi0/0 switchport mode access switchport access vlan 14
!
interface Gi0/1 switchport mode trunk
SW9#
interface Gi0/2 switchport mode access switchport access vlan 14

Correct Answer: B
